WARNING STAYAWAY

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (n = 10) and the intervention group (n = 10). The control group received a standard physical therapy program, while the intervention group received a physical therapy program with a focus on core stability. The subjects were assessed at baseline, 4 weeks, and 8 weeks. The primary outcome was the change in the Oswestry Disability Index (ODI) score. The secondary outcome was the change in the Visual Analogue Scale (VAS) score. The subjects were also assessed for the presence of low back pain (LBP) and the degree of LBP (mild, moderate, severe).
