Figure 1. The study design. The study was conducted in two phases. In the first phase, the effect of the intervention on the prevalence of the disease was evaluated. In the second phase, the effect of the intervention on the incidence of the disease was evaluated.

Figure 1. Schematic diagram of the experimental setup. The subjects were seated in a chair and viewed the screen through a mirror. The screen displayed the target and the starting position of the hand. The hand was moved from the starting position to the target position. The distance between the starting position and the target position was 10 cm. The subjects were instructed to move the hand as fast as possible without overshooting the target. The time taken for the hand to reach the target was recorded. The experiment was controlled using a personal computer.
