1. The estimated water right for the Twin Falls aquifer is 1.62 cfs.
2. Pumping the well at the water right flow of 1.62 cfs will induce an estimated drawdown in the aquifer of 2.1 feet, 1.5 feet, and 0.9 feet at distances from the well of 200 feet, 500 feet, and 1320 feet, respectively.
3. The well should be rehabilitated by installing an approved surface seal and surface casing and backfilling the pit.
4. Aquifer levels appear to be stable since the early 1980s based on the available data, but future long-term declines are possible due to changes in irrigation practices on the southside tract and potential continued drought. However, the proximity of the site to hydraulic boundaries (springs and the Snake River) tends to mitigate both seasonal fluctuations and long-term aquifer level changes.
5. Seasonal fluctuations in aquifer level at the site are approximately 3 to 5 feet.
6. The groundwater right on the well is a statutory claim, covered by an SRBA claim, for 1.62 cfs and 65 acres of irrigation.
7. Full use of the water right may not have been made since prior to the start date of the adjudication. Full use of the right should be resumed using portable sprinkler equipment to achieve full coverage of the claimed place of use.
8. The SRBA claim should be amended to include land in Section 35, since it appears this land was historically irrigated with groundwater. Appropriate ownership changes should also be filed.

Thank you for the opportunity to provide this report. Please do not hesitate to contact me if you have any questions.

Cordially,

Charles G. Brockway, P.E.
