Re: Water Right Nos. 67-88, 67-90B, 67-4175 (Carolex "Down River" Rights)
Water Right Nos. 67-87-, 67-93, 67-4174 (Carolex "Up River" Rights)
Water Right Nos. 67-89B, 67-4069, 67-7403 (Yantis "Down River" Rights)

Dear Craig:

Following up on my voice mail and email, I am enclosing for your review in connection with the above-captioned water rights the response of Alvin Yantis (dated February 12, 2006). Mr. Yantis' letter responds to your letter dated October 19, 2006 (copy also enclosed).

As you know, I represent Carolex LP in connection with its rights captioned above. The issues raised by Mr. Yantis have implications for the appropriate duty of water for Carolex' water rights.

I will look forward to discussing this with you, once you have had an opportunity to review this information.

Sincerely,

Christopher H. Meyer

RE: Hubble Analysis, Claim No. 67-4069

Dear Mr. Yantis,

We received the packet of information you sent in response to the Hubble Analysis Worksheet that we gave you to investigate and determine whether more than 0.02 cfs per acre has been put to beneficial use.

The information submitted appears to be applicable to the ground below your property, which is owned by Carolex LP. I spoke with my supervisor and it was determined that there is not sufficient information to conduct a review of the property you claimed for this water right.

I will be recommending the water rights as is at a combination of one inch per acre with an additional 0.46 cfs for ditch loss on this right.

You will have a chance to object to the recommendation and submit the detailed information requested that can lead to settlement of the water right for the Court to decree. I encourage you to use the form that I mailed you on September 28, 2006 so as not to miss any needed information.

Respectfully submitted,

Craig L. Saxton

February 12, 2007

Dear Mr. Saxton,

RE: (Lower Ditch) Water Rights 67-89B, 67-7403, 67-88, 67-90B & 67-4175

I'm resubmitting the flow rate questionnaire. Your calculations show irrigating 161.4 acres between Carolex LP and us on the lower ditch. The old decree rights allowed 120 acres for us and 960 for Carolex LP. Under New Decree these additional acres will be lost. IDWR is allowing .02 cfs per acre. Our records (see attached) and water master daily records show we have historically used more. Based on (attached) field report and past measurements, we request at least .04 cfs per acre for decree right. "Flood irrigation" is just as it sounds. You flood over the ground and it goes back into the river for someone else to use.

Sincerely,

Alvin Yantis

Enclosures

1. See attachments
2. Yes, there are two separate irrigation systems. The "up river" group allows .85 cfs on 42.5 acres. This ditch system is a mile long. .85 cfs will not make it to the first turnout.
3. Stock watering is ok
4. Gravity: "see attachment" The lava irrigated south of the river was irrigated by gravity flow from wastewater off Mesa Orchard. There could possibly have been a time that a pump and sprinklers could have been used. Due to the nature of soil type, cost of capitol outlays, and operation, what little extra production that could be obtained makes it not feasible at this time.
5. Priority dates are consistent with Muir Decree Records obtainable from the IDWR Internet site.
6. Points of Diversion are consistent with what I told IBWR & Mr. Myers.
7. Disallowed claims: This is also consistent with what I told Mr. Myers. The storage water is administered by the Irrigation Company. Water master of District 67 sets the flow.
8. Weir issue: See attachment
9. Forfeiture – water bank: Very modern irrigation practices for "flood irrigation" are being applied on Carolex Property.

Prior to the late 50's, Mesa Orchard took 95% of the usable water in the late irrigation season. They diverted it four miles upstream and diverted it to the South side of the river. Therefore, there wasn't much water left to be diverted on the north side. Their water right was 70cfs.

When we started irrigating this property in the 70's most water ran down into the low areas straight to the river, or set in the low spots making swamps. With an elaborate set of lateral ditches a more uniform coverage is accomplished, therefore, creating more production. I advised Mr. Myers that he was welcome to come and I would show him around. To successfully flood irrigate on sloping ground takes a lot of time and effort, which is pretty much a lost art. If we do not aggressively pursue the Decree of extra water I have shown we are using by "gravity irrigation", we will not be able to efficiently irrigate all 203 acres.

RE: Water rights ~~67-1069~~, 67-89B, & 67-7403 67-88 67-908 67-4175

Dear Mr. Saxton,

The crops irrigated are native grasses used for hay and pasture. The ditch irrigating these crops is approximately two miles long. There are thirty-five checks on a seven-day rotation.

Measuring records, which you have, indicate the amount of water used from the 1970's. The water master has more records, which are forthcoming. You will find enclosed work sheets from Mr. Tom Dietz who used his gps to gather data on the area and noted the slopes and soil types.

We use more than an inch per acre but are really only borrowing it. As is indicated by the aerial photos, the longest run back to the river is one-fourth mile. Most water is returned in less than two hours. There is a river-measuring device at Fall Creek above us, and another below us at the highway bridge. Measurements in the past indicate that when we are irrigating more water is measured below us than above our place.

We appreciate all your time and effort and if you have any further questions please let us know. Thank you.

Sincerely,

Alvin Yantis
(208)253-4411

Enclosures

To:

REGARDING: ALVIN YANTIS 'HOME PLACE' GPS / AREA

ALVIN YANTIS ASKED ME TO GPS HIS ACREAGE AND GIVE A GENERAL DESCRIPTION.

I USED A GARMIN GPS INSTRUMENT AND WALKED THE PERIMETER OF FIELDS MOSTLY PLANTED TO ^{NATIVE GRASSES} ALFALFA.

LOCATIONS OF FIELDS WERE BETWEEN THE MIDDLE FORK ROAD AND THE MIDDLE FORK OF THE WEISER RIVER, EXTENDING FROM THE YANTIS' HOME TO THE LOWER DIVERSION (MARKED *).

COMBINED ACREAGE FOR ALL AREAS UNDER IRRIGATION BETWEEN DITCH AND RIVER IS APPROXIMATELY 162.2 ACRES (ALLOWING FOR POSSIBLE ERRORS IN TREE AREAS).

GENERALLY, THE ACREAGE HAS A SOUTH ASPECT, AVERAGING 1.5% SLOPE; AREAS CLOSEST TO RIVER ARE LEVEL.

OVERALL, SOILS ARE VERY ROCKY, AND WELL-DRAINED, RESULTING IN POOR FIELD RETENTION.

RUNOFF INTO MIDDLE FORK IS EASILY OBSERVED (WATER PERCOLATING THROUGH ROCKS); EASTERN-MOST SECTIONS HAVE SOME MARSHY, ATTAIN-PRODUCING SOIL).

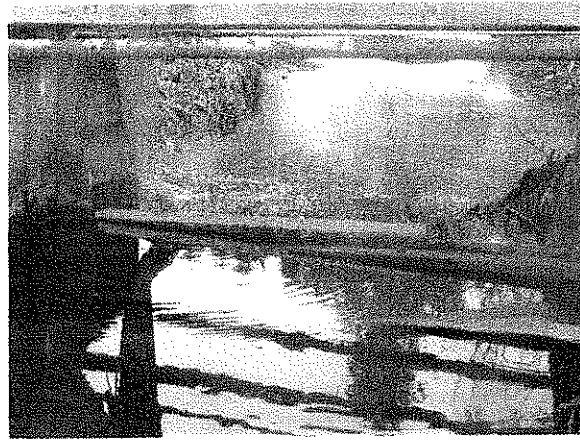

ACREAGES OF INDIVIDUAL SECTIONS (DIVIDED FOR EASIER MEASUREMENT ARE AVAILABLE.

I'M NOT A LICENSED ENGINEER, BUT I DO HAVE A BACKGROUND IN FORESTRY AND AGRICULTURE (B.S. AGRONOMY).
