Digital
Boundary**

The boundary encompassing the place of use for this water right is described with a digital boundary as defined by I.C. Section 42-202B(2) and authorized pursuant to I.C. Section 42-1411(2)(h). The data comprising the digital boundary are incorporated herein by reference and are stored on a CD-ROM disk issued in duplicate originals on file with the SRBA District Court and the Idaho Department of Water Resources. A map depicting the place of use is attached hereto to illustrate the place of use described by the digital boundary.

The rights listed below are limited to the irrigation of a combined total of 19,505 acres in a single irrigation season. Combined Right Nos.: 1-80B, 1-302, 1-10036, and 35-2927.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

The delivery of water to this right may be subject to procedures described in the United States Bureau of Reclamation "space holder" contracts and the Burley Irrigation Dist. v. Eagle, Supplemental Decree (Idaho 5th Jud. Dist., July 10, 1968) and Aberdeen-Springfield Canal Co. v. Eagle, Supplemental Decree (Idaho 7th Jud. Dist., March 12, 1969) together with the natural-flow and storage deliveries as calculated by the Idaho Department of Water Resources.

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the Court at a point in time no later than the entry of a final unified decree. Section 42-1412(6), Idaho Code.

EXPLANATORY MATERIAL: BASIS OF CLAIM - Decreed

Water is delivered through Butte & Market Lake Canal.

10. *Abstract* (e.g., This study examines the impact of climate change on global agriculture, focusing on the role of technology and policy in mitigating risks and ensuring food security. The research involves a comprehensive review of literature and data analysis from various regions, highlighting the challenges faced by farmers and the potential for sustainable agricultural practices. The findings suggest that while climate change poses significant threats to crop yields and food production, innovative agricultural technologies and supportive government policies can help mitigate these risks and ensure a more resilient and sustainable food system for the future.)

Figure 1 illustrates the experimental design. It shows a sequence of three tests: Pretest, Main test, and Posttest. Each test consists of questions and answers. The flow is as follows: Pretest questions lead to Pretest answers, which lead to Main test questions. Main test questions lead to Main test answers, which lead to Posttest questions. Posttest questions lead to Posttest answers, which lead back to Main test questions. There is also a feedback loop from Main test answers back to Main test questions. A dashed arrow indicates a transition from Main test answers to Posttest questions.

1. The first step is to identify the variables involved in the problem. In this case, the variables are the number of hours worked (H) and the number of hours of leisure (L). The total number of hours available is 24 hours per day.

2. The second step is to write down the objective function, which is the function that we want to maximize or minimize. In this case, the objective function is the total utility (U), which is a function of the number of hours worked (H) and the number of hours of leisure (L).

3. The third step is to write down the constraints, which are the conditions that must be satisfied. In this case, the constraints are:

- The total number of hours worked (H) must be less than or equal to 24 hours.
- The total number of hours of leisure (L) must be less than or equal to 24 hours.
- The total number of hours worked (H) plus the total number of hours of leisure (L) must be equal to 24 hours.

4. The fourth step is to solve the problem using the method of Lagrange multipliers. This involves writing down the Lagrangian function, which is a function of the variables H and L, and the Lagrange multipliers λ_1 and λ_2 . The Lagrangian function is:

$$\mathcal{L}(H, L, \lambda_1, \lambda_2) = U(H, L) - \lambda_1(H - 24) - \lambda_2(L - 24)$$

5. The fifth step is to take the partial derivatives of the Lagrangian function with respect to H and L, and set them equal to zero. This gives us the following equations:

$$\frac{\partial \mathcal{L}}{\partial H} = 0 \quad \text{and} \quad \frac{\partial \mathcal{L}}{\partial L} = 0$$

6. The sixth step is to solve these equations for H and L. This gives us the optimal values of H and L, which are the number of hours worked and the number of hours of leisure, respectively.

7. The seventh step is to check the second-order conditions to ensure that the solution is a maximum. This involves checking the Hessian matrix of the Lagrangian function.

8. The eighth step is to interpret the results. In this case, the optimal values of H and L are the number of hours worked and the number of hours of leisure, respectively.
