USE PLATS:

1. The first step in the process of identifying a problem is to define the problem clearly. This involves identifying the symptoms, the scope of the problem, and the impact it is having on the organization. Once the problem is defined, the next step is to gather information about the problem. This can be done through interviews, surveys, and other research methods. The information gathered should be used to identify the causes of the problem and to develop a plan of action to address the problem. The final step in the process is to implement the plan of action and to monitor the results to ensure that the problem is resolved.
