REASONS SUPPORTING OBJECTIONS

2. Source: The excavation and opening of wells and withdrawal of water therefrom by Claimant or shareholders and interest holders of Claimant was, among other things, to improve and preserve the utility of lands by draining them and for the withdrawal of water for the purpose of recovering groundwater resulting from irrigation of water under the irrigation works of Claimant within which lands of said shareholders or interest holders are located. Therefore two sources of water exists for these wells: (a) the groundwater source under a particular well's license, and (b) the source which is separate and distinct from the groundwater source diverted under the license but is diverted from these wells and requires no license. It is necessary to identify this second source within the right of Claimant so that in the administration of this water right, it will be recognized that the water diverted from these wells as authorized by Claimant is groundwater to which said well owners are entitled to divert under not only their licenses but also the diversion of groundwater resulting from irrigation of water under the irrigation works of Claimant within which lands said shareholders or interest holders are located, and for which no license is required.
4. Priority Date: As for the groundwater being recovered under wells which resulted from irrigation of storage water under the irrigation works of Claimant within which lands of shareholders or interest holders of Claimant are located and appurtenant, there is no priority date, as the recovery of water resulting from irrigation within a project is a part of the original water supply diverted. This groundwater is part of the project water of Claimant within which said lands are located and appurtenant, and Claimant, its shareholders or interest holders are entitled to the use of said project water until the project water leaves the project.
9. Place of Use: As this is natural flow surface water originally appropriated for all lands within the boundary of Claimant, it is appurtenant to all irrigated acres to which shares of stock (or other interest) of Claimant within which lands Claimant's shareholders or interest holders are located and appurtenant. However, by agreement with its shareholders or interest holders, Claimant's shareholders or interest holders have been authorized to use the storage project water on the same lands as those described herein as the lands of Claimant's shareholders or interest holders.
10. Other Matters Necessary for Definition of Administration of this Water Right:
It should be noted in the definition or administration of this water right, that to the extent water is being diverted and that said water is the recovery of groundwater resulting from irrigation of storage water under the irrigation works of Claimant within which lands of Claimant's shareholders or interest holders are located and appurtenant, such recovery of groundwater shall be administered separately from all other water rights in the Snake River basin, as such rights are not a connected source of water in the Snake River basin. There should also be no reference to remarks limiting the combined use of this right and Basin 01 rights, except as to the acres within the project to which these rights are appurtenant.
