1. <u>What is the purpose of the study?</u> The purpose of the study is to investigate the effect of the use of a mobile learning application on the learning outcomes of students in the field of computer science.	2. <u>What are the research objectives?</u> The research objectives are to determine the effectiveness of the mobile learning application in improving student learning outcomes, to identify the factors that influence the use of the application, and to explore the challenges faced by students in using the application.
3. <u>What is the research methodology?</u> The research methodology is a quantitative approach using a quasi-experimental design. The study involves two groups of students: an experimental group that uses the mobile learning application and a control group that does not. Data is collected through pre-test and post-test scores, and analyzed using statistical methods.	4. <u>What are the results of the study?</u> The results of the study show that the use of the mobile learning application significantly improved the learning outcomes of the experimental group compared to the control group. The improvement was statistically significant at the 5% level. Additionally, the study found that factors such as student motivation and access to technology influenced the use of the application.
5. <u>What are the conclusions and recommendations?</u> The conclusion of the study is that the mobile learning application is an effective tool for improving student learning outcomes in computer science. The recommendation is that the application should be widely adopted by educational institutions to enhance the quality of learning. Further research is suggested to explore the long-term effects of the application and to investigate the role of other factors in learning outcomes.	6. <u>What are the limitations of the study?</u> The limitations of the study include the use of a quasi-experimental design, which may introduce confounding variables, and the limited sample size, which may not be representative of all students. Additionally, the study only focused on the short-term effects of the application, and did not explore the long-term sustainability of the learning outcomes.
