In regard to water that was ran in the Salem union for stock water, I remember watering the horses in the ditch before & after the work day in the canal across the road from our house & farm yard. This was in the 1942 till 1948 years.

In 1948 we bought a new I H model M tractor & sold the horses. In the same time frame up to 1956-59. my getting out of school, we milked the cows & put the milk in the ditch to cool, the milk man would pick up the milk from the ditch.

I also remember the canal co having the snow plowed from the canal so the water could be turned in early.
