Figure 1. Schematic representation of the experimental design. The first part of the study was a pretest in which the effect of the number of items on the recognition of the items was tested. The second part of the study was a main experiment in which the effect of the number of items on the recognition of the items was tested. The third part of the study was a posttest in which the effect of the number of items on the recognition of the items was tested.

Figure 1 is a schematic representation of the experimental design. It shows two horizontal timelines, one for the 'Control' group and one for the 'Experimental' group. The 'Control' timeline starts with a 'Control' stimulus (a horizontal line) and ends with a 'Control' response (a horizontal line). The 'Experimental' timeline starts with a 'Control' stimulus (a horizontal line) and ends with an 'Experimental' response (a horizontal line). The 'Experimental' response is labeled 'Experimental' and 'Control'.

The diagram illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a sequence of stimuli: a fixation cross, a target stimulus, and a response button. The participant's response is recorded by a computer system. The diagram is labeled with 'Participant', 'Screen', 'Stimulus', 'Response', and 'Computer'.

Figure 1 is a schematic representation of the experimental design. It shows a sequence of events: a subject is presented with a stimulus (a word), then a response is generated (a word), and finally a feedback is provided (a word). The sequence is labeled 'Stimulus', 'Response', and 'Feedback' respectively. The entire process is enclosed in a box labeled 'Experiment'.

Figure 1 is a schematic representation of the experimental design. It shows a sequence of three steps: 1. A stimulus is presented to the subject, which is the sentence "The cat sat on the mat." 2. A response is recorded from the subject, which is also "The cat sat on the mat." 3. The response is compared to the stimulus. The diagram uses arrows to indicate the flow from the stimulus to the response and then to the comparison step.

Figure 1: Schematic representation of the 1000 bp DNA fragment used for the study. The diagram shows a linear DNA sequence with various restriction enzyme sites marked by vertical lines and labels. The sites include EcoRI, HindIII, XbaI, SalI, BamHI, KpnI, SmaI, PstI, ClaI, and NotI. The fragment is divided into three regions: a 5' region, a central region, and a 3' region. The 5' region contains the EcoRI, HindIII, XbaI, and SalI sites. The central region contains the BamHI, KpnI, SmaI, PstI, ClaI, and NotI sites. The 3' region contains the EcoRI, HindIII, XbaI, and SalI sites. The fragment is flanked by two EcoRI sites.

[illegible][illegible]

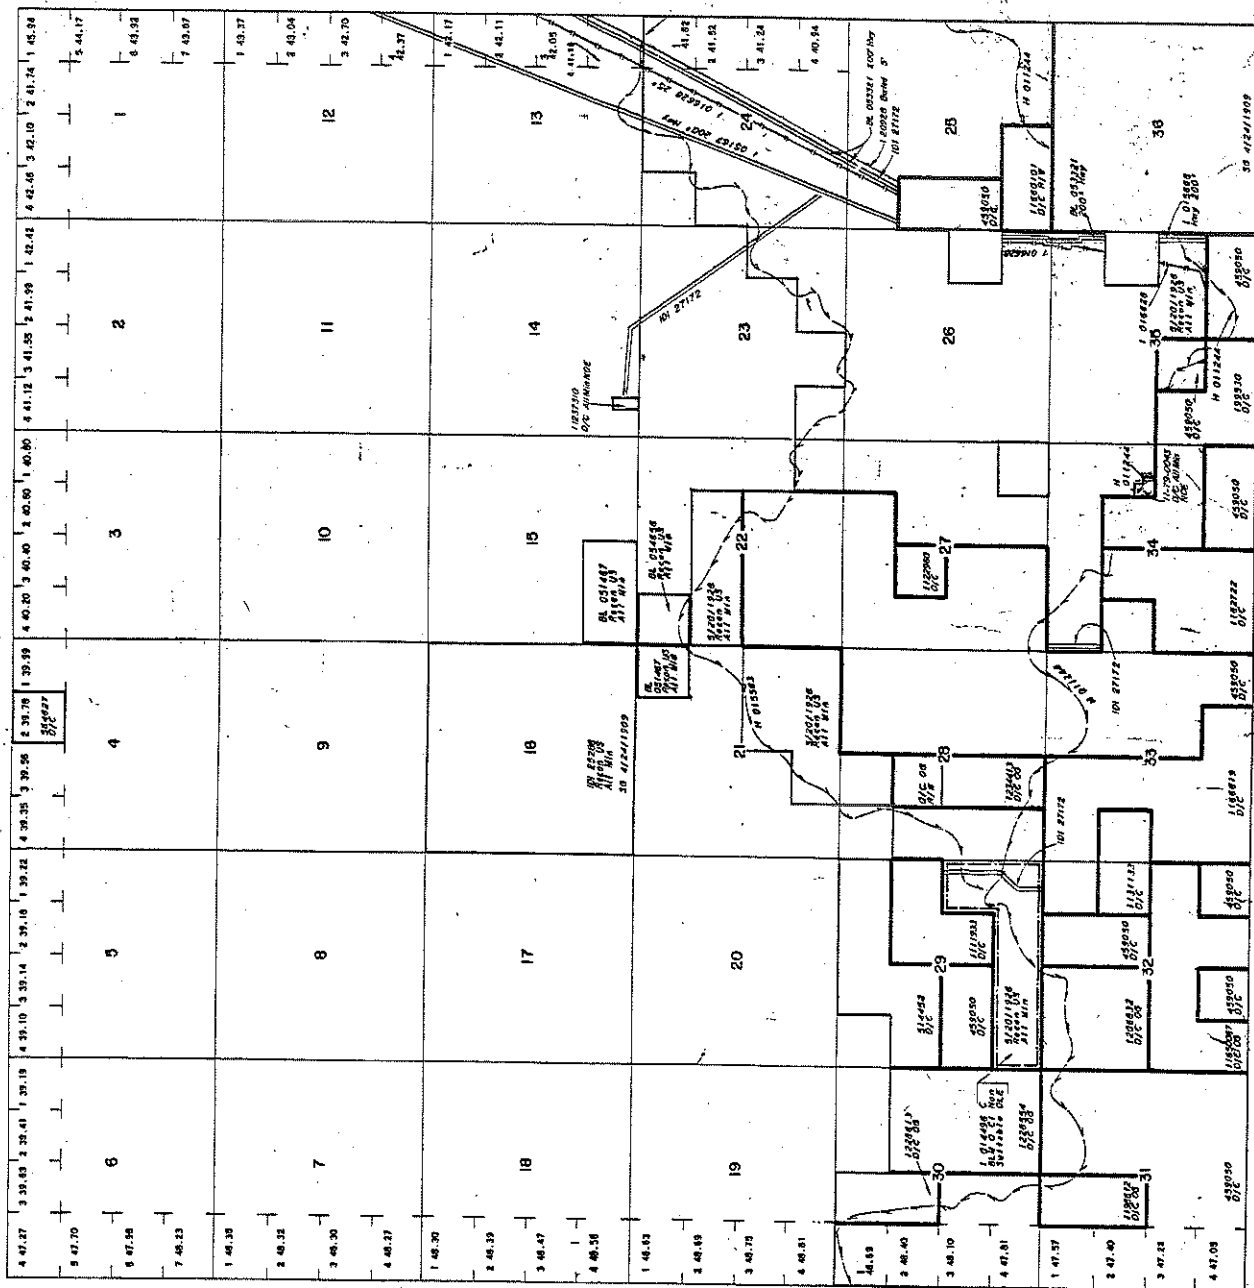

Figure 1. Schematic representation of the experimental design. The figure shows a timeline of the study. The timeline starts with a baseline period (BL) and is divided into three main phases: Pre-Test, Test, and Post-Test. The Pre-Test phase includes a familiarization session (FAM) and a pre-test session (PRE). The Test phase includes a test session (TEST) and a post-test session (POST). The Post-Test phase includes a post-test session (POST) and a follow-up session (FOLLOW-UP). The timeline also shows the duration of each session and the time intervals between sessions.

The diagram illustrates the experimental design as a sequence of three steps: **Stimulus**, **Response**, and **Feedback**. Each step is represented by a box containing a word. Arrows indicate the flow from Stimulus to Response, and from Response to Feedback. The words shown are 'Stimulus', 'Response', and 'Feedback'.

The diagram illustrates the construction of a function f from a function g . The top part shows a function g on a domain $[0, 1]$ with a peak at $x=1/2$. The bottom part shows a function f on a domain $[0, 1]$ with a peak at $x=1/2$, constructed by combining g with a function h on $[0, 1/2]$ and a function k on $[1/2, 1]$.

The diagram illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a sequence of stimuli: a fixation cross, a target stimulus, and a response button. The participant's response is recorded. The diagram is labeled with 'Participant', 'Screen', 'Stimulus', 'Response', and 'Recording'.

[illegible]

Figure 1 The distribution of the number of children per family in the sample.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a screen. On the screen, there is a horizontal line with a central point and two points on either side. A cursor is positioned at the central point. The participant is instructed to move the cursor to the central point. The diagram includes labels for the participant, the screen, the cursor, and the points on the line.

[illegible]

Figure 1 is a line graph showing the time course of the effect of 100 mg/kg of diazepam on the plasma concentration of diazepam in rats. The y-axis is labeled 'Plasma concentration (mg/ml)' and ranges from 0 to 1.0. The x-axis is labeled 'Time (h)' and ranges from 0 to 12. There are two data series: one represented by open circles (○) and another by open squares (□). Both series show a rapid increase in plasma concentration, peaking around 1 hour, and then gradually declining. The open circles series is consistently higher than the open squares series throughout the 12-hour period.

Figure 1 illustrates the experimental setup. A participant is seated at a table, looking at a screen. The screen displays a sequence of stimuli: a fixation cross, a target stimulus, and a response button. The participant's hand is positioned over the response button. The diagram is labeled with 'Participant', 'Screen', 'Target stimulus', 'Response button', and 'Fixation cross'.
