Sept. 21, 1863, in Book
Page 113 of Quartz Locations, in the office of the Recorder of said County, and
it is made for the purpose of appropriating all ground within the boundaries hereinbefore described
and of more definitely describing the situation and boundaries of said lode, correcting any irregularities,
informalities or errors, supplying omissions and correcting any defects which may have existed in the
original location, or the records hereof, hereby waiving no rights acquired under and by virtue of said
original location.

Date of Original Discovery..... Sept. 1, a.d. 1863....., A. D. 1863

Date of Amended Location..... Sept. 13, 1935....., A. D. 1935

Attest:

Joe H. Skidmore

John O. McDonald

STATE OF IDAHO,

ss.

County of Boise

I, Joe H. Skidmore

do solemnly swear that I am a citizen of the United States of America (or have declared my intentions to
become such) and that I am acquainted with the mining ground described in this notice of location and
herewith called the Mammoth

ledge, lode or claim; that the ground and claim therein described or any part thereof has not to the best
of my knowledge and belief been located according to the laws of the United States and of this State
save as mentioned in the within notice, or if so located that the same has been abandoned or forfeited
by reason of the failure of such former locators to comply in respect thereto with the requirements of
said laws, and (in case of quartz claims) that I have opened up new ground to the extent or depth of
ten feet as required by the laws of the State of Idaho.

constructed and as enlarged and the depth of each well. MA MAMOTH ADIT

HOW YOU WILL RECEIVE NOTICES IN THE SNAKE RIVER BASIN ADJUDICATION

All documents filed in the Snake River Basin Adjudication other than notices of claims are filed with the court. Notices of claims to water rights filed in the Snake River Basin Adjudication are filed with the Idaho Department of Water Resources. Copies of all documents filed in the Snake River Basin Adjudication will not be mailed to all parties (claimants) in the adjudication.

By order of the court, any document filed with the court will be mailed only to those parties who may be directly affected by it. A monthly docket sheet will be prepared by the department which contains a summary of all documents filed with the court in the previous month and the dates and locations of hearings scheduled for the following three months. The docket sheet will be filed with the district court clerk in each county within the Snake River Basin in Idaho. Copies of the docket sheet may be obtained from any of the offices of the department either in person or by mail; a small fee will be charged to cover the cost of mailing and/or copying. If you wish to receive a copy of the docket sheet each month, you should mark the appropriate place on your notice of claim form. You will be charged a small annual subscription fee to cover the cost of copying and mailing. Copies of any document listed on the docket sheet may be obtained from any of the offices of the department either in person or by mail; a small fee will be charged to cover the cost of mailing and/or copying.

Copies of all notices of claims filed with the department will be available for inspection from all offices of the department. Copies of the notices of claims may be obtained in person or by mail, but you will be charged for the cost of copying and mailing. (A claimant will not be charged for a copy of his or her own notice of claim, and a person who acquires property with water rights for which a notice of claim was filed will not be charged for a copy of the notice of claim filed by the previous owner.)

After the notices of claims have been reviewed, the director will prepare and file a report with the court. Part 1 of the report will contain the director's recommendations as to each water right claimed under state law. Part 2 of the report will list each federal reserved water right claimed. A number of reports will be prepared, one or more for each sub-basin in the Snake River Basin. When the report for your sub-basin is filed with the court, you will be mailed a notice informing you that the report for your sub-basin has been filed. The notice will be sent to the most recent address shown by the department's files. Attached to the notice will be a copy of those portions of the report describing the water rights you have claimed. If you do not agree with the way your water right is described, you may file an objection to the report with the court. You can also file an objection if you disagree with the way other claimant's water rights are described, and the notice will tell you where a copy of the full report is available for inspection. The notice will tell you when and where to file your objection. The notice of filing for each sub-basin report will also be published state-wide in local newspapers.

6. Water is claimed for the following purposes:

(both dates are inclusive)

(cfs)

(acre feet)

For MINING purposes from 01-01 to 12-31 amount 0.4 or _____

For _____ purposes from _____ to _____ amount _____ or _____

For _____ purposes from _____ to _____ amount _____ or _____

For _____ purposes from _____ to _____ amount _____ or _____

7. Total quantity claimed (a) 0.4 (cfs) and/or (b) _____ (acre feet)

8. Total consumptive use claimed is _____ acre feet per annum.

9. Non-irrigation uses; describe fully (eg. Domestic: Give number of households served; Stockwater: Type and number of livestock Etc.) MINING

10. Description of place of use:

a. If water is for irrigation, indicate acreage in each subdivision in the tabulation below.

b. If water is used for other purposes, place a symbol of use (example: D for Domestic) in the corresponding place of use below. See instructions for standard symbols.

13. Describe any other water rights used at the same place and for the same purposes as described above.

or None ☒

14. Remarks:

Last Name _____ Ident No. _____

Copies: White -State, Yellow-Claimant

It is very important that you inform the department in writing of any change in your address. This is to make sure that you receive the notices affecting your water rights that are to be mailed by the department.

If you are acquiring property with water rights in the Snake River Basin water system in Idaho (either by purchase, gift, inheritance, or other means), it is very important that you inquire of the department whether a notice of claim has been filed. If not, you must file a notice of claim or the water right may be declared by the court to no longer exist. If a notice of claim has been filed, it is very important that you file a written notice of change in ownership with the department. The notice of change in ownership must be accompanied by some evidence of the change in ownership, such as a copy of the deed or a property tax statement showing the name of the new owner. Again, this is to make sure that you receive the notices affecting your water rights that are to be mailed by the department.

The cost of the subscription to the docket sheet is \$7.50 for calendar year 1988. The cost of the subscription may increase a small amount for calendar year 1989 if the cost of copying and/or mailing should increase.

If you are planning to file a motion or other pleading (not a notice of claim) with the court (not IDWR), the court has issued an order setting a special procedure that is different from the usual civil rules. A copy of the order may be obtained from any office of IDWR; you may be charged for the cost of mailing and/or copying.

MANNING EQUATION CHANNEL CAPACITY RESULTS

08-22-2002

File Number: 63-15607

Claimant: SKIDMORE

Channel measured: SPRINGS FROM MINE DITCH

Date of measurement: 8-21-02

Measurement location:

08N 06E S26 NWNE

Calculation prepared by: RDH

Comments about the measurement:

The results of the calculation are:

The length of the channel measured is 94 feet.

The upstream and downstream rod readings are 3.75 and 4.65 feet.

The channel cross section is 0.62 ft-sq.

The wetted perimeter is 2.38 feet.

The hydraulic radius is 0.26 feet.

The slope is 0.0096

The roughness coefficient is 0.0250

The flow velocity is 2.382 ft/sec.

The rate of flow is 1.48 cfs.

CROSS SECTION NUMBER 1

①

BRIEF SUMMARY OF THE MAMMOTH REPORT

The Mammoth Property is situated in Boise County, Idaho, about ten miles east of Pioneerville. A road, eighteen and a half miles in length makes the place accessible by auto from Idaho City.

The property has produced about \$620,000., and should be good for several times that much more. The bulk of the production came from a block of ground 250 x 170 ft. for a vein width of 2 to 4 ft. Former owners lost the ore for the reason of faulting and were unable to solve the problem.

There are 14 unpatented mining claims. Ample timber for mining needs may be had from the claims, and there is an abundant supply of water for domestic and milling needs. The mine proper is situated on Summit Flat at an elevation of 7200 ft. The property is well equipped for operation. Camp buildings are adequate for thirty men or more. The buildings consist of boarding house, bunk house, office, assay office, shops, framing sheds, dwelling, barn, and mill. The five stamp mill, steam driven, is complete and in good running order.

The mine is developed chiefly by the 70, 100, and 200-levels. Ore was mined from the 200-level to the surface, and eastward to the main fault. No ore has been mined east of the fault. The owners are now driving what is called, and shown on the map as the Cedar Adit to locate the continuation of the Mammoth Vein. Until this is found, there is no ore of any great quantity to show the examiner unless the 300 and 400-levels are pumped out. All the ore chutes in the west end of the mine apexed a few feet above the 200-level. Good ore was mined in the west end of the 200-level by two, shallow, underhand stopes. The ore continued in depth, but water rendered hand work impractical for sinking. Westward extensions of the two lower levels should cut this ore.

The ore formerly mined here was the highest, average grade of any mined in the state; mill heads were usually above \$100.00 per ton in gold, and often reached \$300.00 per ton. The recovery of this high grade ore chute in the unfaulted segment is the main argument of this report and recovering this unfaulted segment and the placing of this vein in production will lead to the further exploration of the vein at depth and to the other veins existing within the group.

Sam Ballard
General Manager

DESCRIPTION OF THE MAMMOTH PROPERTY
Summit Flat Mining District Boise County, Idaho.

A. Situation of the property and means of access thereto.

The Mammoth property is situated in Boise County in the south-central part of the state, near the head of Grimes creek, a tributary of the Boise river. More specifically it is located on Summit Flat, about ten miles north-east of Pioneerville. A road, passable to cars and trucks connects the property with Idaho City, the county seat, situated twelve miles south of the mine. This road, eighteen and a half miles in length, follows the general course of the old one that was used in the early days to freight into this area. The Forest Service is considering the construction of approximately six miles of new road that will give the mine a direct outlet via Lowman-Idaho City-Boise highway. A good auto road up Clear Creek from Pioneerville approaches within four miles of the mine.

B. Physical Property

The property consists of fourteen unpatented lode claims which are contiguous and some of which date back to territorial days and which cover the known ore exposed in the vicinity of the Mammoth Vein, covering specifically the Mammoth, Jackson, Elephant and Hanging Wall veins.

This property is surrounded by open public domain and there are no known locations within one mile. Additional claims for timber or other purposes may therefore be located as, in the judgment of the new management, may be required.

This property was probated about two years ago in connection with the death of Mr. Skidmore, Sr., and the title is now in excellent condition.

C. History and production of the mine.

The Mammoth Mine was discovered in 1863 by a party of explorers who were in search of placer gold. A large amount of high-grade, quartz float led to the discovery of the outcrop. This float was milled later and netted \$62,000. The explorers, being in search of placer ground (the rich gold placer deposits had been discovered in the Basin that year), sold their interests to a man named Jackson, who started work by sinking a shaft on what is known as the Jackson ore chute. From this thirty-five foot shaft he milled \$35,000. worth of ore that year. Jackson sold the property to Clarkson and Brown, who drove the old 180-level and sluiced the surface, recovering some \$300,000. Due to a disagreement they sold to Henry Whitney and Ben Wilson, who

drove the present 200-level. Their production amounted to about \$220,000. Ben Wilson bought out Whitney's interest. Shortly after Wilson became sole owner of the mine, a lawyer, name unknown, forged a power of attorney and sold Wilson's holdings to an English Syndicate, pocketed the proceeds and left for parts unknown. The English company sank the Main shaft to the 300-level, but before they could get into production, Wilson entered suit to recover the property, causing the company later to cease operations. After much litigation and prolonged strife the English company allowed the property to go to the lien holders by default. Eventually five lien holders, Jim O'Brien, Joe Poncia, Bob Poole, Norman Young, and Geo. Stuck became the owners. A doctor by the name of Wm. A. Magee purchased the property from the above men.

Magee, besides knowing very little about mining, was greatly handicapped with incompetent help. Magee spent about \$100,000 chiefly on buildings and the new mill. He sank to the 400-level and drifted west on the 200-level. Ore was encountered in the west end of the 200-level but same seemed to go up only a few sets above the tunnel level. As ore is to be seen in the bottom of the drift, these chutes must have been blind ones that apexed a short distance above the level.

The various interests were then consolidated by Mr. Skidmore and Mr. McDonald, who held the property for a number of years, have produced very little ore but who now have the entire title to the property in excellent condition. The death of Mr. Skidmore about two years ago resulted in his son Joe Skidmore, Jr., returning to the property (giving up his position with a mining company in Oregon) and his working out of the geology of the fault which has been the major difficulty of this property since the days of early production. An examination of the findings of Mr. Joe Skidmore, Jr., and a comparison of his conclusions with the actual ground conditions were the occasion of our recent visits to the mine and the basis of this report.

D. Facilities and equipment.

Ample timber for mining needs may be had from the claims, and there is an abundant supply of water for domestic and milling needs. A good power house site is available on Grimes creek about two miles from the mine which will develop about 500 H.P. ultimate and on which 200 could be developed, which would be ample for the future operations here at a cost probably not exceeding \$75.00 per H.P. The power may also be purchased from the Grimes Pass Power Company, which is now serving Boise Basin, and to secure this power the construction of about eight miles of high test line will be required. Their power schedules for mine consumption compare favorably with the power schedules of the larger companies and may be the solution of the power problem at this mine.

The property is well equipped for operation. The drilling however, is still done by hand. The buildings consist of boarding house, bunk house, office, shops, framing sheds, assay office, dwelling, barn, and mill; all well constructed and preserved. Accommodations are very good from a mining standpoint. The five-stamp mill is fully equipped with ore bins, Gates gyratory crusher, Challenge feeder, complete five-stamp battery almost new, plates, launders, bolts, pulleys, shaftings, centrifugal pump, Atlas 30-HP steam engine, and one 30-HP boiler completely equipped. The mill is in good running order. About sixty cords of wood are cut and now on the ground. This mill has made an average recovery of this ore of 85% by amalgamation and will serve very nicely for the material recovery of the high grade values formerly milled. The full development of this property, when explored at depth and the ore resources of the additional vein determined, will require a larger capacity mill with facilities probably similar to the Telache Mill at Quartzburg, which made a very remarkable recovery and effectively demonstrated that fine grinding, with its attendant polishing of the finely ground gold particles, has rendered as high as 95 per cent of the gold values of Boise Basin amenable to amalgamation.

E. Development

This mine was developed on the high grade ore chute by the 70, intermediate, 100 and 200 foot levels, connected with suitable raises in the ore course and particularly the 200-level of the mine is now in good condition and will probably continue to be the main working level of the mine after the recovery of the unfaulted segment east of the fault. From the 200-level a shaft is sunk 200 feet, making the 300 and 400 levels of the mine and this shaft and these levels are now flooded and have been during the present ownership.

F. Ore Resources of the 300 and 400 levels

All information concerning the development and ore resources at 300 and 400 levels has been acquired by the present management from the word of old miners employed in the property and from a brief report or letter signed by Mr. F. E. Wilson, M.E. which stated that the West drift extended westerly on the 300-level showed an average of 34 inches of ore which had increased from a gold content of \$2.00, near the shaft, to a gold content of \$20.00 at the end of the drift, and which showed an average value as balanced with its width of \$11.50. This ore is probably the downward extension of the low grade ore exposed in the west end of the 200 foot level and probably bears no relation to the high grade ore mined just west of the east fault. Little is known concerning the east drift on either the 300 or 400 foot levels but it is fairly definitely established that these would not reach the fault and could not have reached the continuation of the high grade chute on the 70, 100, and 200 levels which has a decided easterly rake.

These levels, as also the shaft itself, have been flooded since their completion and should be in good condition.

G. Geology

Summit Flat is located in the northern part of Boise Basin, a small marginal portion of the great Idaho granite batholith to which Lindgren and others have ascribed late Cretaceous or early Eocene age. Granite rocks crop out over the greater part of the area and comprise the main rock exposure to be seen. Numerous dikes, ranging from highly acidic to highly basic are intruded into the granite. No sedimentary or metamorphic rocks have been observed in this or nearby surrounding country.

The granites of the district are composed of feldspars and quartz with more or less mica, especially biotite, so that biotite-granite is the usual country rock. Some writers class the granite as granodiorite, but the distinction is not thought to be important.

There are numerous dikes intruded into the granite in the vicinity of the mine. These dikes vary in composition from the basic differentiates to the highly acidic rhyolite porphyries, with the rhyolite porphyry, diorite porphyry, and basic dikes as the most common and important varieties. The acidic dikes have a fairly uniform north and south strike and, together with the other intrusions, vary locally from a few inches to fifty feet in width. Regarding their relative economic importance it will be noted that the larger ore bodies seem to occur in the vicinity of the basic differentiates.

The entire country is extensively faulted, chiefly in a N-S direction with some local, minor variations. At the mine there are two important faults called east-end and west-end faults. The east-end fault strikes N-S, and dips 40°-70° to the west, with normal displacement. It was this fault that "lost the vein" for the previous owners. The west-end fault has not been investigated very thoroughly to date, aside from determining its existence, and more work will be needed to determine its character and displacement.

H. Geology of the ore deposits.

The ore deposits occur as fissure veins and irregularly spaced quartz lenses that are related to regional shearing. In the Mammoth workings, a large dike intersects the Mammoth fissure near the main ore chutes and apparently offsets the vein. The deposit shows the "pinches and swells" usually characteristic of such veins. The width of the largest high-grade swell of quartz at this mine was over eight feet, and the average width of the ore chutes was between two and three feet. The quartz is usually separated from the walls by a talc streak. The country rock is a biotite-granite, and shows signs of increasing alteration as the vein is approached.

7

I. Mineralogy of the ore.

The ore consists of the following minerals in a gangue of quartz, sericite or kaolin, gold, sphalerite, galena, pyrite and occasionally stibnite, with the quartz as the most important carrier of the free gold and sulphides. The quartz veins at the Mammoth mine often show evidence of subsequent deposition of quartz and metallic sulphides along with the gold and silver.

The gold often is found in the veins with practically no sulphides in evidence, and again there will be zones of very rich ore where the gold is associated with the sulphides. Sometimes the gold, as shown by photomicrographs, occurs completely surrounded by galena and sphalerite. It occurs also free and disseminated throughout the general mass of the quartz in which no evidence of fissuring is recognized. Again cracks and vugs of the oxidized ore will contain fine and coarse gold rather abundantly.

J. Metallurgy

The present process of recovery used is stamp mill amalgamation, plate amalgamation, and riffling. Considerable research work on cyanidation of the ores was done and the ore was found amenable to this process.

With a few simple changes, the present mill could be equipped to handle the ores by amalgamation exclusively with much higher recoveries than are effected at present. Straight amalgamation as used at the Telache Mines Co. mill has been proven to be a very efficient method of recovery.

K. Mine conditions and possibilities.

The chief production of gold from the Mammoth vein came from a 250 ft. zone between the Main shaft and a large rhyolite dike to the east. This portion of the vein, having an average vertical depth of 170 ft., produced in the neighborhood of \$500,000. This fifty foot rhyolite dike, as shown on accompanying sketches Nos. 1 and 2, is also indicated on the map with its respective positions on the different levels. This intruded mass displaced the vein about thirty feet. A normal fault just east of the dike, as exposed on the 70-level, displaces the vein again. Such a movement, due to the dip of the vein, would place the eastern segment of the vein further to the south, at any given elevation, than its western portion. High-grade ore was mined up to the dike and fault, and rich ore specimens are found in the fault movement. These evidences indicate post-mineral faulting. Former owners cross-cut to the north for the faulted vein with no success, and failed to see the importance of exploring to the south.

Another bit of encouragement which expedited the driving of the Cedar Adit was the finding of quartz float in the vicinity that panned free gold. Since this area is approximately the place where the eastern extension of the vein is expected to cross, it was though best to drive the adit rather than explore from the 70-level which necessitated a very long tram. Plat of Mammoth Mine workings shows this adit and its possible position with regards the vein to the east. This tunnel is now in, at the time of writing, about 320 feet, with an estimated 150 feet of work still to be done to reach the vein. Proving the vein here makes available about 500 feet of virgin ground to the east of the fault with over 270 feet of vertical backs by extending the 70-level's south cross-cut No. 70-280, and by cross-cutting from station 209 on the 200-level.

L. Policy of Development.

The ore vaules existing in the Mammoth vein between the surface and the 200 foot levels west of the fault have produced approximately \$620,000 from a very small block of ground and the determination of the continuation of this ore chute east of the fault and in its unfaulted position is the important determination to make upon this property and this may most cheaply be done by a continuation of the Cedar adit, as shown on the plat of the Mammoth Mine workings attached to this report in which the unfaulted segment is shown east of the fault in its position as determined from a study of the fault on its west side in its relation to the rhyolite dike, and the recovery of this unfaulted segment of the vein will be the determining factor in all future development of this property.

Exploration of the 300 and 400 levels of the west ore chute, of the Elephant and Jackson veins, should be secondary to the development above and while these features form very favorable additions to the property, they may ultimately equal or exceed the high grade chute in total production. They may best be explored after the recovery of the high grade chute east of the fault.

M. Veins other than the Mammoth.

The Elephant.

This is a large, persistent, quartz vein that, so far, has not been sufficiently developed. Where cut by the Jupiter adit the vein varies from 15 to 20 ft. in width. It is exposed in the north drift, but the 300 ft. drift to the south on the vein is not accessible now due to caving. Continuing south on this vein about 700 ft. should encounter the Mammoth vein. At another place this vein outcrops near Grimes Creek, (see photograph "Cut on Elephant Vein"), approximately 1,000 ft. north of the Jupiter adit. Here the vein has about the same width. The writers have made no effort to sample and explore this promising vein. The following data and assays concerning the Elephant vein are quoted direct from Mr. Wilson's report.

"I consider this one of the best surface showings

in the district, and should receive some attention. The ore carries gold, silver, copper, lead, and zinc, a complex ore to be sure; samples of the clean ore will assay as high as 50 oz. in silver with about \$3.00 in gold. I also find the clean quartz accompanying this ore to assay \$7.00 in gold. The croppings indicate a ledge of good size and certainly worthy of further development." From Wilson's sample sheet we get the following:

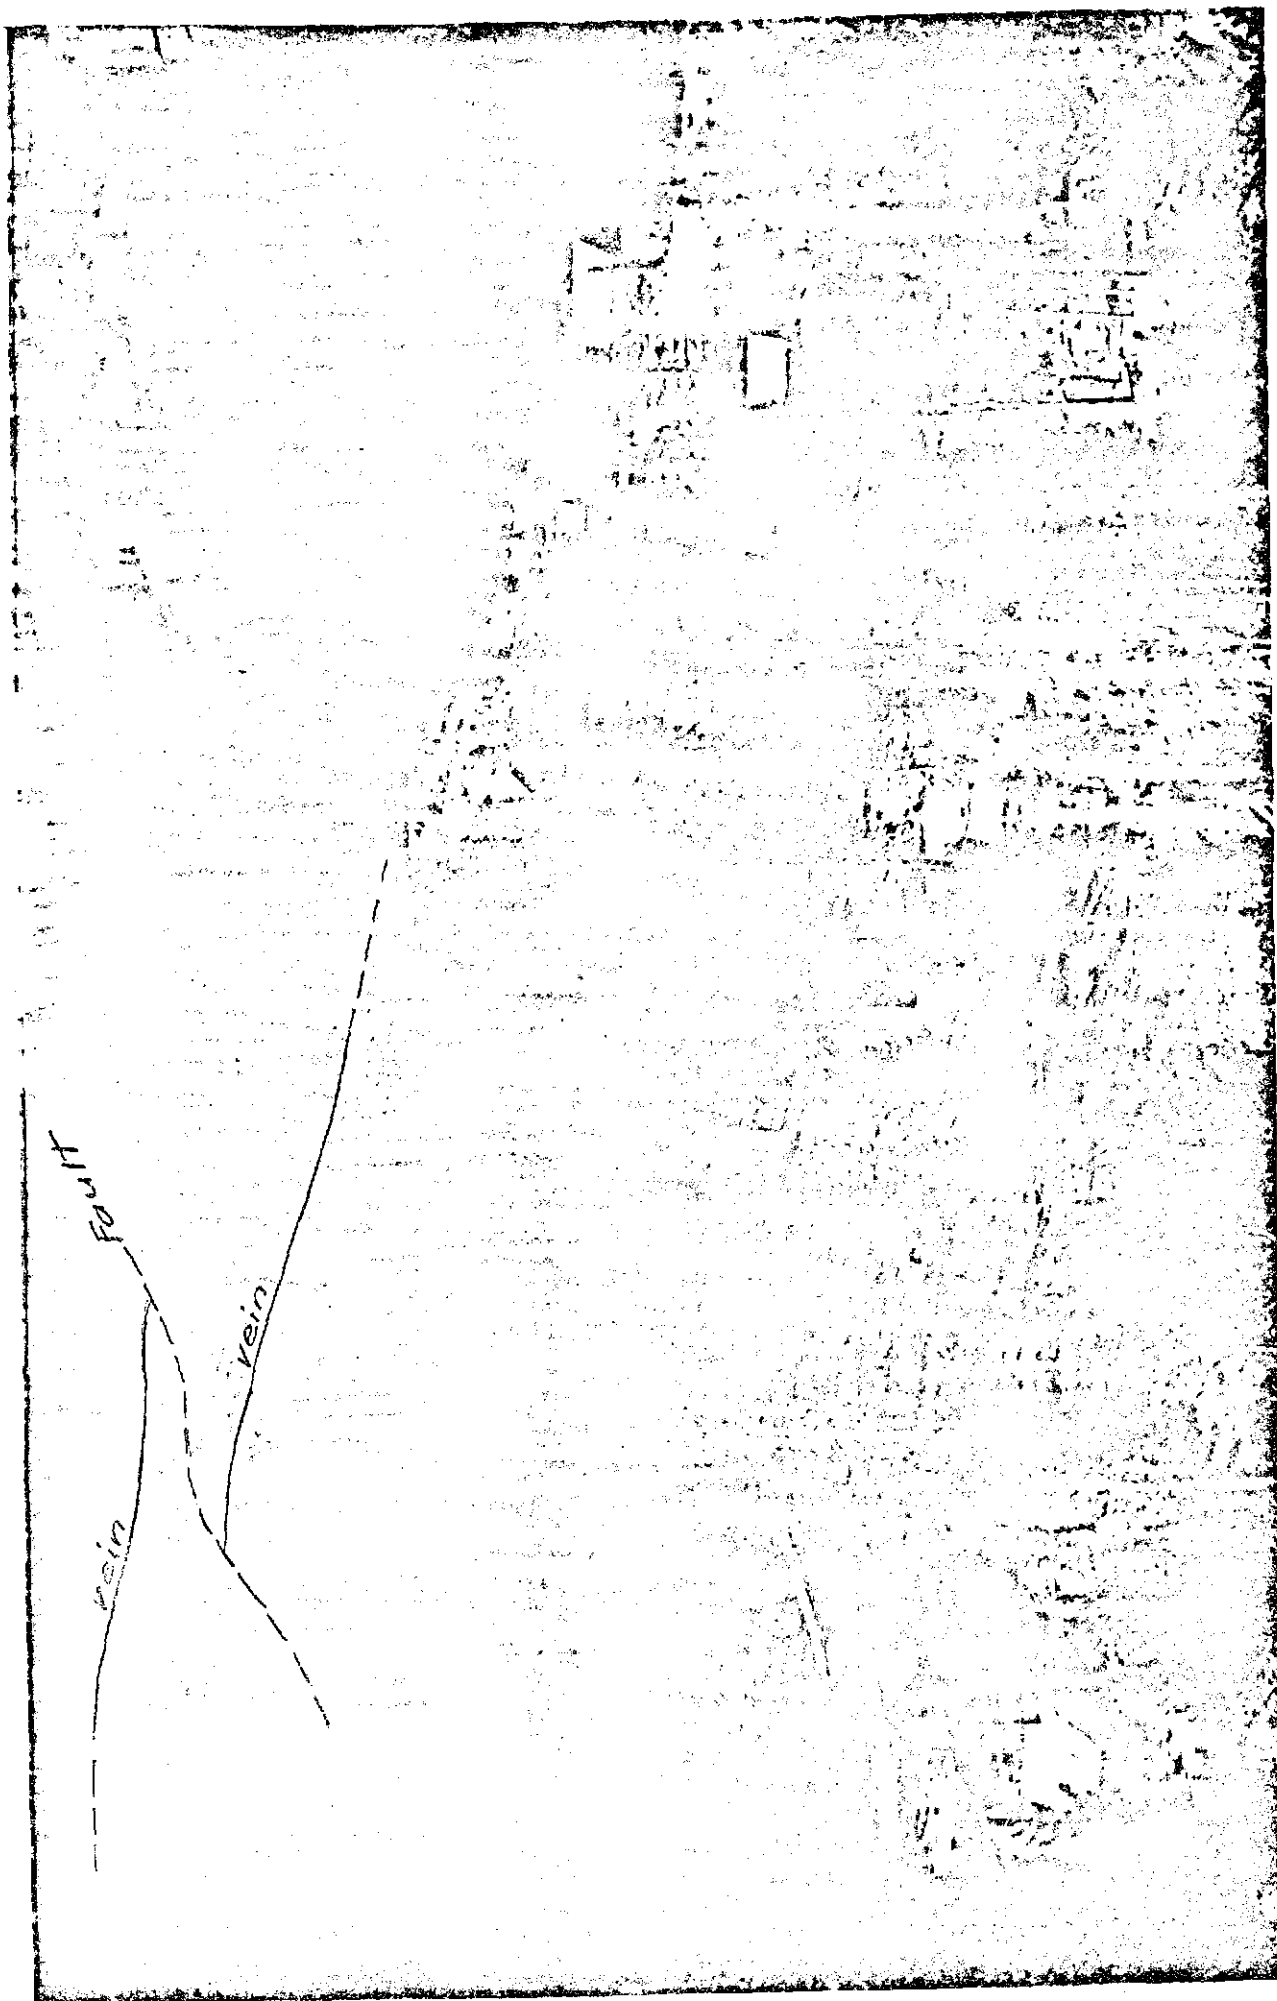

Samples from bottom of 8 ft. hole, base ore.		
	oz. Au.	oz. Ag.
Sample base ore	0.12	2.48
Selected clean ore	0.15	50.00
White quartz on west side of base ore	0.30	7.44

The Jackson.

This is a N-S vein that lies about 1500 ft. to the east of the Elephant and crosses the Mammoth vein about 350 ft. east of the Main shaft. From reliable authority we are informed that a Mr. Jackson sank 35 ft. on this vein near where same intersects the Mammoth and recovered \$35,000. The old timers said the ore cut off, which is likely true, as the east-end fault should be about that depth in that particular zone. The vein has been located on the 70-level, and the drift on same that has been started should be continued.

N. Acknowledgments.

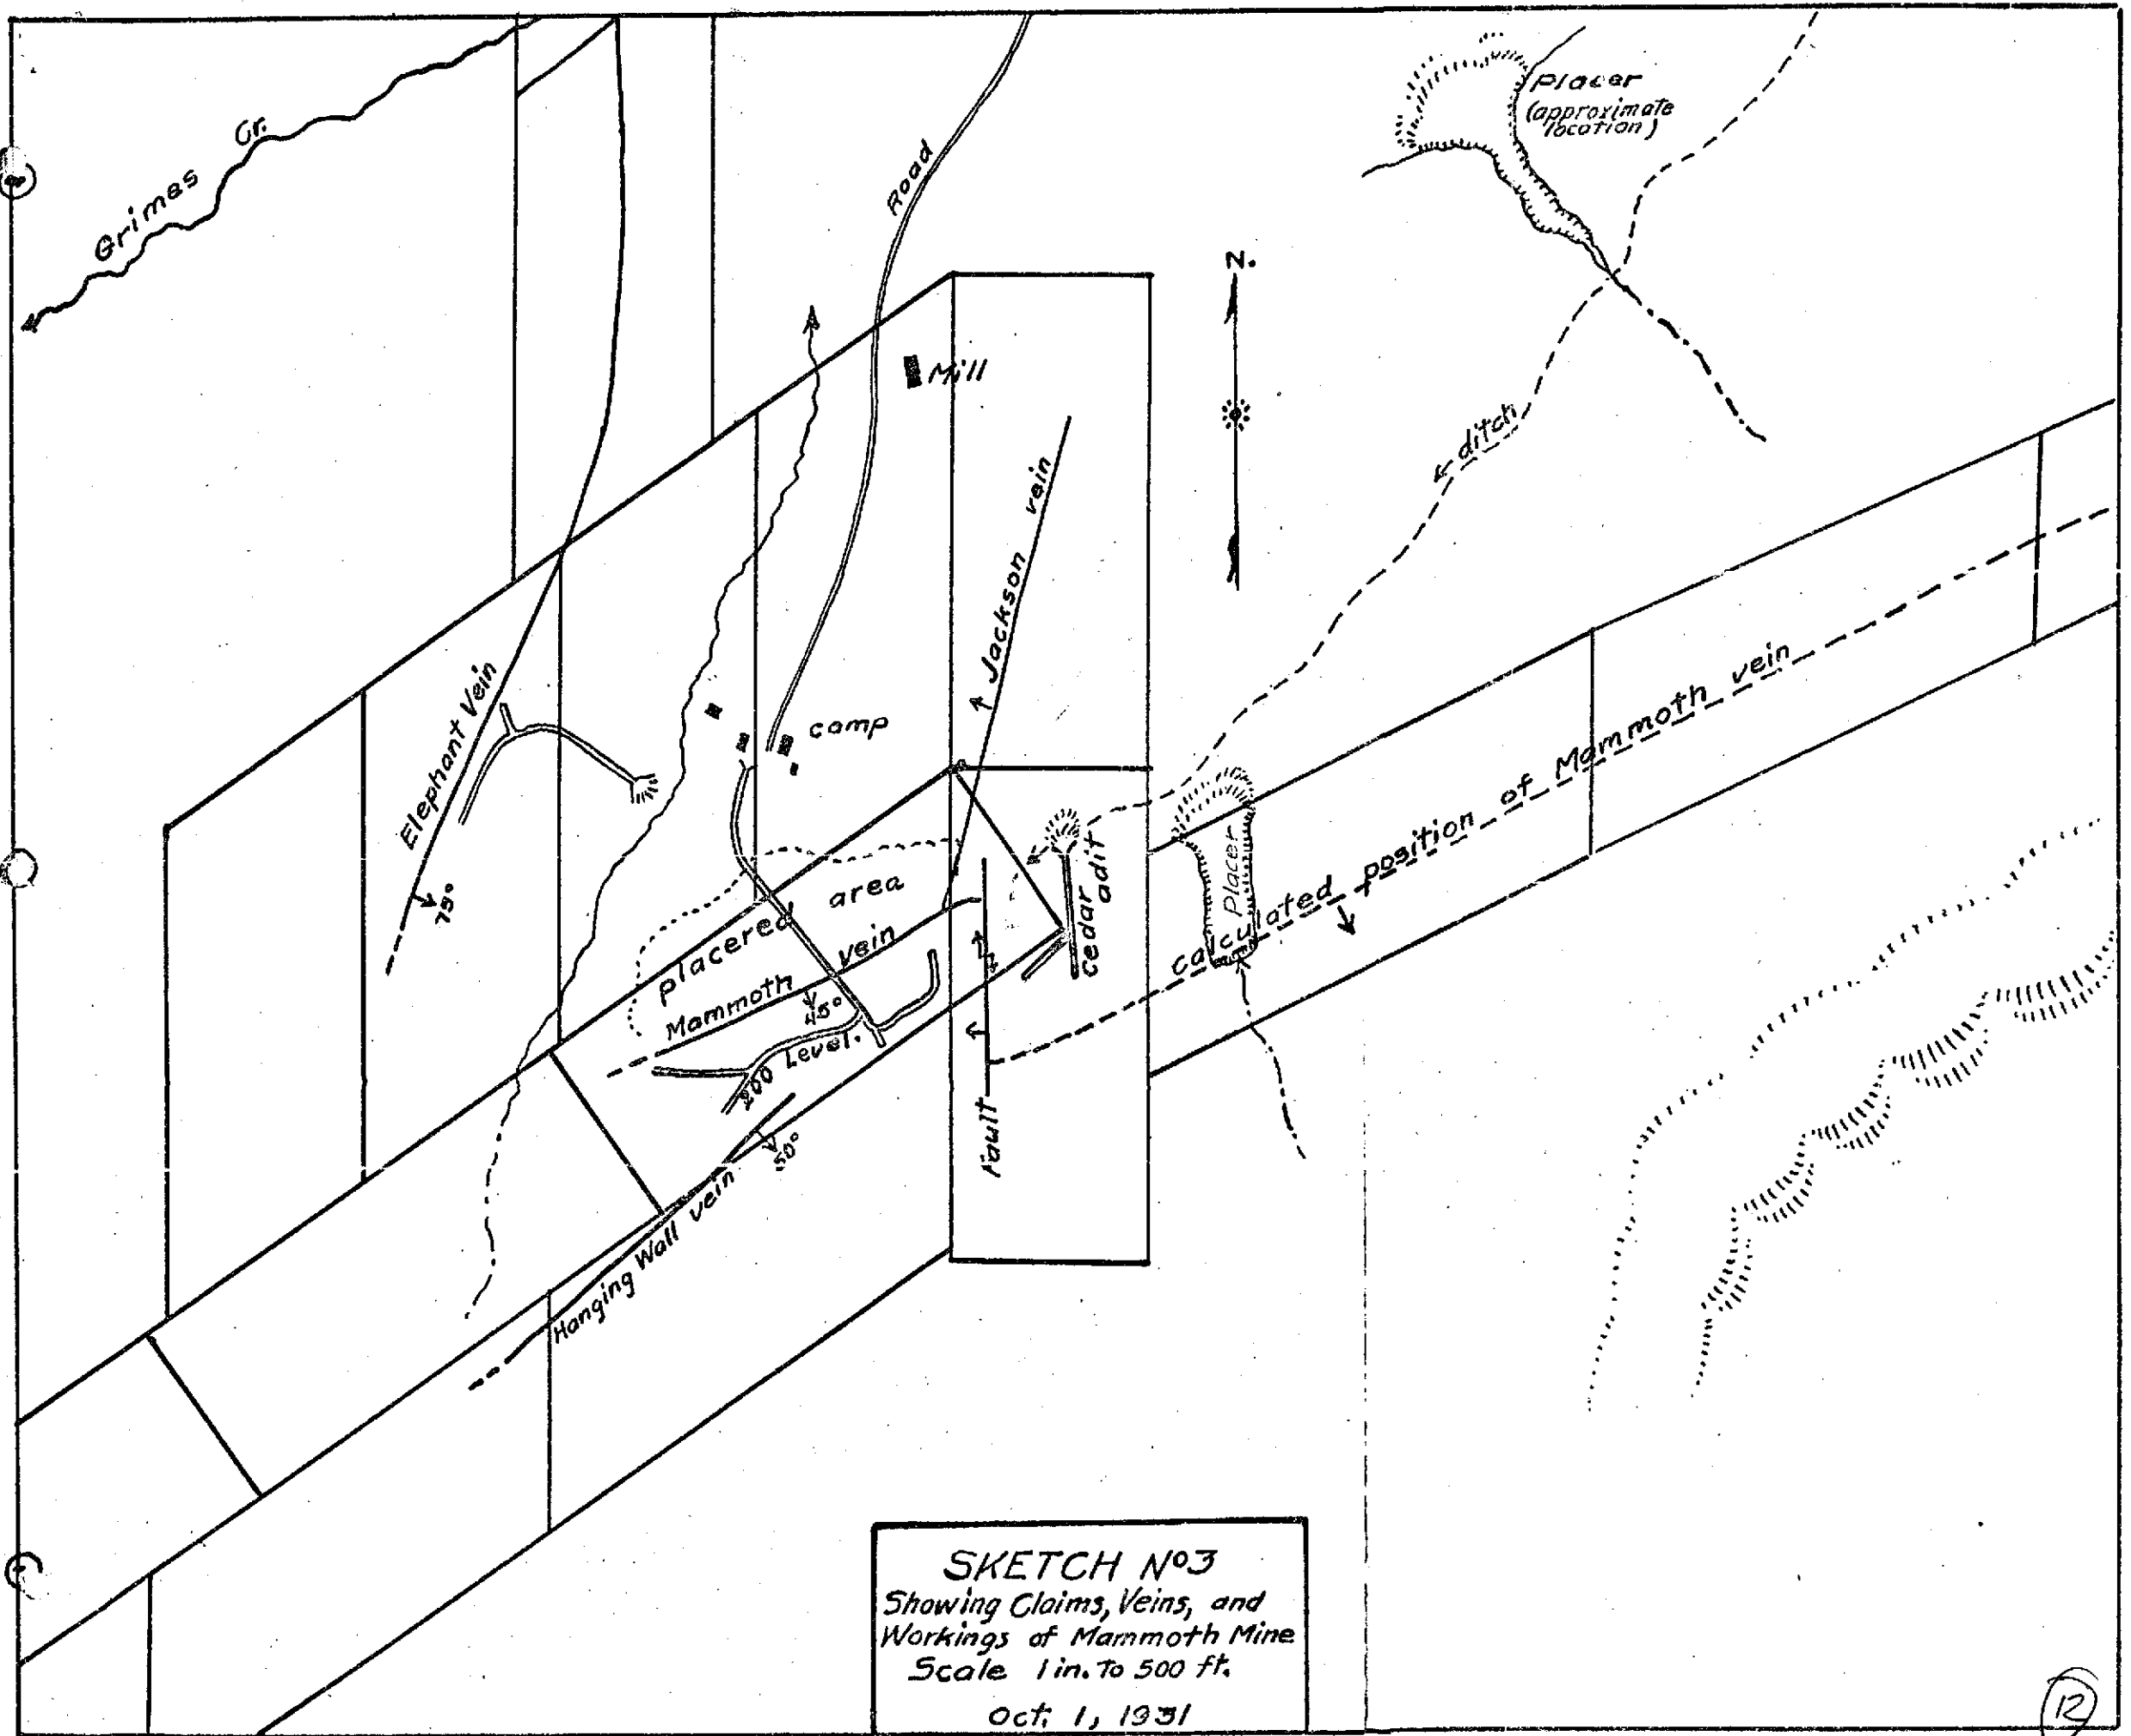

This report is founded primarily upon a report originally reported by Mr. Joe H. Skidmore on October 1, 1931, and this report is freely quoted from without quotation. The information is brought down to date with the last study of the fault problem and the conclusions of this report are founded upon the report by Mr. Skidmore, the personal examination of the mine workings and the mine maps, the latter of which are in excellent condition at the property. The plot of the Mammoth workings is taken principally from a similar sketch by Mr. Skidmore and is a small scale drawing by him of the large detailed mining maps which he has prepared.

Showing Claims, Veins, and
Workings of Mammoth Mine
Scale 1 in. To 500 ft.
Oct. 1, 1931

10/9/01

Claim No. 63-15607

STATE OF IDAHO

Department of Water Resources

RECEIVED

OCT 15 2001

WATER RESOURCES
WESTERN REGION

Me/ Shulte,

Please find enclosed an Amended Affidavit to include additional information taking the Mammoth Lode Claim ownership to 1863 and the last amendment of 1935, and to the inclusion of that claim in the Patent Numbered 11-68-0097 in 1968. The original owners of the Mammoth Claim first mined by use of Hydraulic ~~mining~~ mining using water under pressure to wash ore out of the ground - followed by two stamp mills as mining progressed.

Also find Attachment #9 - Beneficial Use.

Please add this information to the original submission mailed on Oct 4, 2001.

Give me a call after reviewing all the information and your findings from the site visit tomorrow.

DAVID SKIDMORE
520-299 2397

IN THE MATTER OF)
NOTICE OF CLAIM TO)
A WATER RIGHT NO.(S))
63-15607)
)
)
)

AMENDED

AFFIDAVIT

State of Idaho)
County of BOISE)

David F. Skidmore

being first duly sworn,

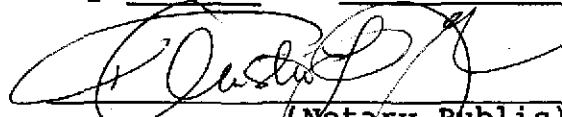

deposes and says: ~~The mining claim group that supports this Priority Date and Beneficial Use dates back to 1863 and constant ownership has continued to today. Water use to support the mining activities (including two stamp mills) continued to the mid 1930's. For several years to 1959 only minimal work continued to hold the claim group intact. In 1959 during the late summer the mine was reopened and the Beneficial Use for mining activities were resumed by July 31, 1959 and continue to today as in the past.~~

~~The NINE attachments show the mining property ownership from 1959 to the 2001 assessment year and Beneficial Use.~~

~~Attachment #1 - 1959 Proof of Labor - January 16, 1959~~
~~#2 - Correction Deed of Personal Representative - April 20, 1987~~
~~#3 - Trustee's Deed - June 17, 1987~~
~~#4 - Trustee's Deed - June 17, 1987~~
~~#5 - Trustee's Deed - June 17, 1987~~
~~#6 - Decree of Distribution - July 27, 1987~~
~~#7 - Trust Transfer Deed - October 2, 1995~~
~~#8 - August 21, 2001 the BLM received the filings for 2001/2002 (three items): Affidavit of Annual Assessment Work ; Notice of Intention to Hold ; Maintenance Fee Waiver Certification.~~
~~#9 - Beneficial Use~~

(Signature)

Subscribed and sworn to before me this
day 9 of October, 192001.

(Notary Public)

Residing at Jackson, Arizona.

My Commission Expires March 23, 2004.

BENEFICIAL USE

Historic water use for the mining activities included drilling water and milling water. The drilling water is removed from the adit water and used in drilling.

The milling water will be withdrawn from the adit water and used as the ore is ground into a size that will liberate the gold mineral by gravity means.

QUANTITY

Mining activities - drilling would require about 100 gallons per day when drilling and blasting is being done.

Milling activities would require about 600 gallons per hour or about 4800 gallons per day for one ton of ore.

Total water use per day for mining and milling activities would be estimated to total 4900 gallons per day.

Attachment #9

Claim No. 63-15607

AND Etha W. Skidmore

KNOW ALL MEN BY THESE PRESENTS, That

KNOW ALL MEN BY THESE PRESENTS, That Joe H. Skidmore & John O. McDonald

the undersigned citizens.....of the United States, over the age of twenty-one years, having complied
with all the requirements of the laws of the United States and the State of Idaho, relating to mining
claims, and with the local laws, customs, rules and regulations of Summit Flat Mining
District, hereby make and file this amended location of the Mammoth

Lode, claiming, by right of discovery, location, primal appropriation and possession
1500 feet, linear and horizontal measurement, on this vein or lode of quartz, or other
rock in place, bearing gold and other valuable minerals, with all dips, variations and
angles, the same being 565 feet along the ledge in a Southwesterly direction
from the discovery stake, and 935 feet, along the ledge in a Northeasterly direction
therefrom, together with 300 feet in width on each side of the middle of said ledge,
and all veins, lodes, ledges, mineral deposits, mineral and surface ground within the lines of said claim.

Situate in Summit Flat Mining District, County of Boise

State of Idaho, in the Boise Basin and more particularly described as follows, to-wit:

Commencing at the SW center end stake which is situated 565 feet in a South-
westerly direction from discovery monument; thence in a Southeasterly (S34°37'E)
direction 300 ft. to corner No. 2 or SW cor; thence Northeasterly (N55°23'E)
1500 ft. to Corner No. 1, or SE cor; thence Northwesterly (34°37'W) 300 ft. to
NE center end stake; thence Northwesterly (34°37'W) 300 ft. to corner No. 4 of
NE Cor; thence Southwesterly (S55°23'W) 1500 ft. to Corner No. 3 of NW Cor; thence
Southeasterly (S34°37'E) to said SW center end stake and the place of beginning.

The adjoining claims are 4th July No. 1; Analee No. 2; Cedar; and Esther

I, Joe H. Skidmore

do solemnly swear that I am a citizen of the United States of America (or have declared my intentions to become such) and that I am acquainted with the mining ground described in this notice of location and herewith called the Mammoth

ledge, lode or claim; that the ground and claim therein described or any part thereof has not to the best of my knowledge and belief been located according to the laws of the United States and of this State save as mentioned in the within notice, or if so located that the same has been abandoned or forfeited by reason of the failure of such former locators to comply in respect thereto with the requirements of said laws, and (in case of quartz claims) that I have opened up new ground to the extent or depth of ten feet as required by the laws of the State of Idaho.

ATTACHMENT # 1-2
Claim No. 63-15607

I-1583

The United States of America

To all to whom these presents shall come, Greeting:

WHEREAS, In pursuance of the provisions of the Revised Statutes of the United States, Chapter Six, Title Thirty-two, and legislation supplemental thereto, there are now deposited in the Bureau of Land Management of the United States the Plat and Field Notes of Survey and a Certificate of the Land Office at Boise, Idaho,

accompanied by other evidence whereby it appears that

Joseph H. Skidmore

has entered and paid for the Mammoth, Palos Verdes, Cedar, Fourth of July, Fourth of July No. 2, 4th of July No. 3, and Etta No. 1 lode mining claims,

designated as Survey No. 3581, embracing a portion of Sections 23, 25 and 26 in Township 8 north of Range 6 east of the Boise Meridian, in the Summit Flat Mining District, Boise County, Idaho, the said claims being more particularly described in the official field notes and depicted on the official plats which are expressly made a part of this patent and copies of which are attached hereto.

The premises herein granted contain 140.572 acres.

I-1583

Reserving to the United States that right-of-way known as the Summit Flat Road No. 380 and all appurtenances thereto, constructed by the United States through, over, or upon the lands contained within the Etta No. 1 lode claim, and the right of the United States, its agents, or employees, to maintain, operate, repair or improve the same, as long as needed or used for or by the United States.

NOW KNOW YE, That there is therefore, pursuant to the laws aforesaid, hereby granted by the United States unto the said

Joseph H. Skidmore

the said mining premises hereinbefore described, and not expressly excepted from these presents, and all that portion of the said veins, lodes, or ledges, and of all other veins, lodes, and ledges throughout their entire depth, the tops or apexes of which lie inside of the surface boundary lines of said granted premises in said survey extended downward vertically, although such veins, lodes, or ledges in their downward course may so far depart from a perpendicular as to extend outside the vertical side lines of said premises: PROVIDED, That the right of possession to such outside parts of said veins, lodes, or ledges shall be confined to such portions thereof as lie between vertical planes drawn downward through the end lines of said survey so continued in their own direction that such planes will intersect such exterior parts of said veins, lodes, or ledges; AND PROVIDED FURTHER, That nothing herein contained shall authorize the grantee herein to enter upon the surface of a claim owned or possessed by another.

11-68-0097

ATTACHMENT #1-B
claim No. 63-15607

I-1583

TO HAVE AND TO HOLD said mining premises, together with all rights, privileges, immunities, and appurtenances of whatsoever nature thereunto belonging, unto the said grantee above named and to his successors and assigns forever; subject, nevertheless, to the above-mentioned and to the following conditions and stipulations:

FIRST. That the premises hereby granted shall be held subject to any vested and accrued water rights for mining, agricultural, manufacturing, or other purposes, and rights to ditches and reservoirs used in connection with such water rights, as may be recognized and acknowledged by the local laws, customs, and decisions of the courts. And there is reserved from the lands hereby granted a right-of-way thereon for ditches or canals constructed by the authority of the United States.

SECOND. That in the absence of necessary legislation by Congress, the Legislature of Idaho may provide rules for working the mining claim or premises hereby granted, involving easements, drainage, and other necessary means to its complete development.

IN TESTIMONY WHEREOF, the undersigned authorized officer of the Bureau of Land Management, in accordance with the provisions of the Act of June 17, 1948 (62 Stat. 476), has, in the name of the United States, caused these letters to be made Patent, and the Seal of the Bureau to be hereunto affixed.

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF BOISE
MAGISTRATE DIVISION

In the Matter of the Estates	)	CASE NO. PR 517
	)	
of	)	
	)	
JOSEPH HANSEL SKIDMORE and	)	DECREE OF DISTRIBUTION
ETTA M. SKIDMORE,	)	
	)	
Both deceased.	)	

The Petition of LINDA JANE SKIDMORE BLAISDELL for Settlement and Distribution the above-named estates having come before the Court for hearing, the Court makes the following findings:

1. LINDA JANE SKIDMORE BLAISDELL is the duly appointed, qualified and acting Personal Representative of the above-named estates.

2. The Personal Representative has filed an Inventory and Appraisement of all of the property of the estates known to her.

DECREE OF DISTRIBUTION, Page 1.

ATTACHMENT #6
Claim No. (S) 63-15607

FEB 16 1999

9:00 A.M.

3. Notice to Creditors has been published and the time for presenting claims that arose prior to the death of the decedent has expired.

4. All debts of the decedent and of the estate, and all expenses of administration, and all taxes that have attached to or accrued against the estate have been paid.

5. The Personal Representative has filed Waivers of Accounting, and the estate is in a condition to be closed.

6. Proof of Service of the Notice of the time for filing objections to the Petition for Distribution has been filed. No objections have been filed.

7. The decedent, ETTA M. SKIDMORE, died testate on May 27, 1967, at the age of 49 years. The decedent's Will was probated in California, and as to the Idaho property a certified copy of the decedent's Will was admitted to probate on the 30th day of October, 1986. By the terms of the decedent's Will, all of the assets owned by the estate are to be distributed to JOSEPH HANSEL SKIDMORE, the then surviving spouse of the decedent. The following assets are hereby distributed to the estate of JOSEPH HANSEL SKIDMORE, to-wit:

Patent 11-68-0097, ordered March 13, 1968; recorded as Instrument #72932 on May 3, 1968, Book 8 of Patents, Page 404, known as the Mammoth Group, Consisting of seven patented mining lodes situated in Sections 23, 25 and 26, T8N R6E, Boise, Meridian, all in Boise County, Idaho. The undersigned, as the agent for the owner or the owner of the mining claims listed on the reverse side of this instrument, who being first duly sworn certifies that:

At least 100 dollars worth of work or improvements were performed or made upon each mining claim listed on the reverse of this document. The mining claims/sites are situated in Summit Flat mining district, County of Boise, State of Idaho. (Sec.26, T8N. R6E.)

Such expenditure was made by, for, or at the expense of Linda S. Blaisdell, Joseph H. Skidmore II, David F. Skidmore., owner of said claims, for the purpose of holding said claims. All stakes, monuments or trees marking boundaries of said claims are in proper place and position.

This annual assessment work was performed for the assessment year ending at 12 o'clock noon on September 1, 2001.

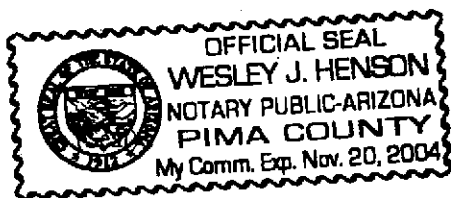

Witness my hand this 31st day of July, 2001.

INSTRUCTIONS

1. This certification is made under the provisions of § 1744 of Title 43 and § 28-28k of Title 30 of the United States Code; and the regulations thereunder (43 CFR Part 3830).
2. The claimant(s) must fill in the dates in paragraph 1 for the beginning and ending of the assessment year for which this waiver is sought.
3. The claimant(s) must fill in the date in paragraph 2 for the beginning of the assessment year for which this waiver is sought.
4. All claim and site names and Bureau of Land Management (BLM) serial numbers must be listed for the mining claims, mill sites, and tunnel sites for which the waiver is sought.
5. All owners of the mining claims, mill sites, and tunnel sites and their addresses must be given.
6. This waiver form must be signed by all the claimants or their designated agent, in original form. If an agent is designated, a notarized designation of agent, signed by all of the claimants with proper address given, must be submitted with this waiver.

7. This form must be filed no later than September 1st for the upcoming assessment year in the BLM State Office where the mining claims or sites are recorded, or the waiver cannot be granted by the BLM. (Example: to obtain a waiver for the assessment year 2000, which begins at noon on September 1, 1999, you must qualify for and file for a waiver no later than September 1, 1999 in the proper BLM State Office).
8. For all mining claims which require assessment work, you must record an affidavit of labor on or before the December 30th immediately following the filing of this waiver. For all other mining claims or sites waived, you must record a notice of intent to hold on or before the December 30th immediately following the filing of this waiver.
9. Mill and tunnel sites may also be listed upon this waiver and be waived from payment of the maintenance fee. A notice of intent to hold for these sites is required to be filed by the December 30th following the filing of this waiver.

NOTICE/BURDEN HOURS STATEMENT

The Privacy Act of 1974, as amended, and the regulation in 43 CFR 2.48(d) provide that you be furnished the following information in connection with the information required by this certification of waiver from rental fees.

AUTHORITY: 30 U.S.C. 28-28k; 43 U.S.C. 1201, 1457, 1740, and 1744; and 43 CFR 3830.

PRINCIPLE PURPOSE: This information is to be used to verify that the owner(s) (claimant(s)) of a mining claim has complied with 30 U.S.C. 28f and is entitled to perform assessment work in lieu of paying the maintenance fee for the mining claims listed on this form.

ROUTINE USE: (1) Adjudication of the claimant(s) certification of waiver from paying the maintenance fee otherwise required by 30 U.S.C. 28f. (2) Disclosure may be made to appropriate Federal agencies when location is made within the agency's geographic area of responsibility. (3) Information from the record and/or the record will be transferred to the appropriate Federal, State, or local agency, or a member of the public in response to a specific request for pertinent information. (4) Information may also be provided to the Department of Justice or in a proceeding before a court or adjudicative body; or to Federal, State, local or foreign agencies when needed for enforcement of civil or criminal codes or applicable regulations concerning title rights upon the public land.

EFFECT OF NOT PROVIDING INFORMATION: Disclosure of this information is required by 30 U.S.C. 28f and 43 CFR Part 3830 for those qualified claimants wishing to take the small miner waiver allowed. Failure to supply the information required in this form to support the claimants certification of waiver from payment of the otherwise required maintenance fees will result in the waiver being disallowed and the mining claims subject to forfeiture by BLM under 30 U.S.C. 28i.

The Paperwork Reduction Act of 1995 requires us to inform you that:

This information is being collected to allow the BLM to determine if you qualify for a waiver from the payment of \$100 per mining claim or site maintenance fee established in 30 U.S.C. 28f and the implementing regulations at 43 CFR 3830. A response to this request is required in accordance with the statute to obtain your benefit.

BLM would like you to know that you do not have to respond to this, or any other, Federal agency-sponsored information collection unless it displays a currently valid OMB control number.

Public reporting burden for this form is estimated to average 8 minutes (0.133 hours) per response, including time to review instructions, gathering and maintaining data, and completing and reviewing the form. Direct comments regarding this burden estimate, or any other aspect of this form, to the U.S. Department of the Interior, Bureau of Land Management, (1004-0114) Bureau Clearance Officer (WO-630), Mail Stop 401 LS, 1849 C St., N.W., Washington, D.C. 20240.

Re: Claim No(s) 63-15601

Dear Claimant(s):

In the past, you submitted the above referenced claim(s) in the Snake River Basin Adjudication. Enclosed is a computer generated print-out of the claim(s) for your reference only; this print-out is **NOT** to be returned or re-filed. You have indicated when this claim was filed that the water right(s) was based on either a "Statutory Claim" or "Beneficial Use" of the water. Water rights of this type are established by the historical use of water for a beneficial purpose, dating back to the time the water was first used, this date being the "**Priority Date**" as shown on the enclosed print-out. Your claim(s) has not been confirmed by a previous filing with the Department of Water Resources since there is no decree, license, or permit on file to verify the use of this water. For this reason, the Department is required to gather evidence from claimants supporting the date of priority for claims based on historical beneficial use of water. Any other claims you may have filed, that are not listed above, do not require evidence of priority be submitted at this time.

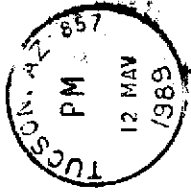

Enclosed is a pamphlet entitled "**Evidence of Priority**" which describes why evidence of the priority date is necessary along with examples of types of evidence that can be submitted to fulfill this requirement. If no evidence is submitted, or we do not hear from you within the time limit below, your priority date, as claimed, may not be recommended to the Court for decree. This could jeopardize your water use under this right(s), if water availability problems arise in the future. It is our goal to decree the historical water rights within the Snake River Basin as accurately as possible. Field exams to verify claims in this area are now being conducted by Department personnel. Please contact this office as soon as possible to schedule a field exam appointment convenient for you.

The required evidence supporting the priority date(s) must be submitted by **October 15, 2001**, referencing all documents with the corresponding claim number(s). If you have any questions not covered by this letter, or the enclosed pamphlet, please call the Western Region office shown above.
