MEMORANDUM

TO: Dan Nelson

FROM: Darwin Vander Stelt, preparer

DATE: 10/23/2003

RE: ~~Ed Van Grouw~~ Dan Van Grouw, Applications for Transfer of Water Right.

Water Right nos. 63-7695, 63-10307, and domestic or exempt rights, 63-18720, 63-18722 (limited to 13000 gal/day).

Ed VanGrouw has expanded his dairy and taken irrigated land out of production to make room for buildings, corrals, and a composting area. An analysis of the acreage taken out of production suggests a total of 39.2 acres removed from irrigation. Since Ed VanGrouw's brother, Dan Van Grouw needed more water for his dairy on Blackcat Road, it was agreed to sell the excess to Dan.

The existing stockwater rights are 63-18720 (which is assumed to be the exempt or domestic right), and a small amount of stockwater right in 63-10307. It is assumed that the stockwater portion of the domestic right is for 35 gpd of water for 300 cows. The calculations which develop the appropriate number of acres to dry up for each transfer are located in Attachments B and C.

There is a difficulty in that the two irrigation layers, 63-7695 and 63-10307, specify a different number of acres irrigated. WR 63-7695 allowed irrigation of 275 acres, and WR 63-10307 allows irrigation of 285 acres. Currently, 245.8 acres are irrigated, a reduction of 29.2 acres for WR 63-7695 and 39.2 for WR 63-10307.

WR # 63-10307 requires that the licensed flow first be directed to irrigating the additional 10 acres covered, with the remainder constituting a second layer over the original 275 acres. That this was the intent is demonstrated by the calculation of volume for irrigation purposes used on WR # 63-10307:

Total flow/ac for irrigation for both licenses for 285 acres = $5.55/285$
= .019473684 cfs

Portion of the total devoted to the additional 10 acres irrigated by WR # 63-10307
= .19473684 cfs.

Portion of WR # 63-10307 available as new layer for the original 275 acres=
 $1.36 - .19473684 = 1.16526$ cfs

$(1.16526 \times 246 \text{ days} \times 24 \text{ hours} \times 60 \text{ min} \times 60 \text{ sec}) / 43560 = 568.6 \text{ af} + 45 \text{ af}$
for the new 10 acres = 613.6 afa

By drying up an area covered by both rights for Ed, and giving Dan all the water on the 10 acres covered only by WR # 63-10307 (along with some covered by both rights), we simplify the calculations somewhat. Calculations for flow and volume are in attachment D.

I am happy to answer any further questions about this application. Thank You!

VOLUME CALCULATIONS:

Even though both water rights are listed on the lands being retired for this transfer, 7695 has always been capable of supplying the full volume requirement for the lands irrigated by this water right. Therefore, the volume for all of the lands retired will be listed under water right 7695 only. Water right 10307 only supplies an additional rate of diversion and does not supply any additional volume to the dairy.

Dairy sheet shows ^{30.4}30.23 acre feet of water is needed with 74.2% of this water used for stockwater and 25.8% of this water used for commercial uses.

^{30.4}
7695 30.23 afa of water will be supplied by water right 7695
10307 0.0 afa of water will be supplied by water right 10307

The stockwater portion of 10307 already has 0.03 cfs and 2 afa already allocated to this right. Therefore the stockwater for 10307 will be as follows:

Stockwater volume = 0.0 afa proposed + 2 afa existing = 2.0 afa total.

Stockwater rate = 0.04 cfs proposed + 0.03 cfs existing = 0.07 cfs total

ED VAN GROUW WATER RIGHT SPLITS

This 285 acre farm is covered by two water rights. The earliest in time water right 63- 7695 covers 275-acres of the 285-acre farm. 63-10307 covers the entire 285 acres of ground irrigated. There are 10 acres that are only covered by 63-10307. When the diversion rates for both water rights are combined they equal 5.55 cfs or approximately 0.019473684 cfs/acre or very close to an inch per acre.

The transfer proposes to dry up 12.9 acres of ground to supply additional water to an existing dairy. The following are the calculations required to determine the diversion rates for each use on each water right.

7695	4.19cfs	1237.5afa	275 acres
10307	1.36 cfs	613.5 afa	285 acres
