Subject: Objection 32-11147

This morning I looked at the Case Management Report and found an objection assigned to me which I had not looked at before.

The SF1 lists "total quantity in cfs," "total quantity reserved," and "Purposes of use" as objected-to elements. Under "reasons" is listed "Generally the amount of water from Blue Creek Spring should be allocated for other potential uses by me" and under "changes" is listed "see above." Attached to the SF1 is an application for a power generation permit.

Comparing the recommendations to the claim, it looks like we recommended all the claimed annual volume, and combined the claimed acreage in a permissible place of use with other rights.

The Notice of Error asserts that this right is from a source not tributary to the Snake Plain Aquifer. At the settlement conference the claimant asserted that the entire POU is underlain by a bentonite deposit which allows no deep percolation to the aquifer. While this is not mentioned in the objection, the objection may be an effort to secure a forum for that contention.

The sources are small enough streams and springs that it is likely the claimed POU represents approximately the historic extent of the natural stream flow. The assertion is that historically, all the production of the sources was confined above the bentonite barrier and evapotranspired by native plants. This is plausible.

Very near to the POU is a commercial bentonite mine, supporting the contention of an underlying deposit. Also nearby is Liddy Hot Springs. Because of the differences between hydraulic head and temperature, it appears Liddy Hot Springs is not directly connected to the Snake Plain aquifer.

If the issue arises in objection settlement, I'd be inclined to consider expert testimony the claimant might bring forth asserting this source is non-tributary.
