1987 NAPP

PICTURE #35, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. DUPLICATE photo of photo 34, with no ink marks. This photo shows two points of diversion in the NENW of S10, T4S, R9E. West P/D is a plastic dam, East P/D is a gravel rock diversion with a control headgate further down. View is to South.

PICTURE #36: FX 5-28-96. Photo's by RDH. Natural channel & Ditch of Cold Springs Creek point of diversion, located in the NWNE of S10, T4S, R9E.

PICTURE #33, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. Ditch from Cold Springs Creek upper point of diversion shown in photo's 1 & 4. Photo location, SWSE, S3, T4S, R9E. Ditch flows through several wet spots or spring like areas that are a part of Cold Spring Creek taking advantage draining them. This ditch water flows in and out of natural channels of Cold Springs Creek and diverted out at points of diversion recommended in the NENW & NWNE of S10, T4S, R9E. See photo's 34, 35 & 36.

PICTURE #34: FX 5-28-96. Photo's by RDH. This photo shows two points of diversion in the NENW of S10, T4S, R9E. West P/D is a plastic dam, East P/D is a gravel rock diversion with a control headgate further down.

PICTURE #31, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. Collection culvert from Distribution Pond. (Piped underground from Distribution Pond). This is a pressurized system for sprinklers, it is used in conjunction with gravity flows through culverts and the ditch shown in photos 23 & 24 from the Distribution Pond.

PICTURE #32: FX 5-28-96. Photo's by RDH. A Spring location that has been identified as part of the Cold Springs Creek water in prior Cold Springs Creek decree. No precise point of diversion, water is drained from a large area located in S2 & S3, T4S R9E. View is from access road on the East looking to West.

PICTURE #29, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. POU
view from the NENE corner of S29 to the SW.

PICTURE #30: FX 5-22-96. Photo's by RDH. POU photo, located at
first cut-off ditch in S29, view is from East to West.

PICTURE #25, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) Photo location, North of reference "H". Ditch from distribution pond in center of photo into what may have been considered in the past as part of Cold Springs Creek. This channel cannot receive water directly from Cold Springs Creek, only used as a conveyance for the ditch and waste water from the field. This ditch has 2+ well water, spring water and Cold Springs Creek water. The ditch can be filled to max with either 2+ well water or Cold Springs Creek water alone. Per John McGrew. Location of POU shown SWNE & SENE, S16, T4S, R9E.

PICTURE #26: FX 5-22-96. Photo's by RDH. Same ditch shown below photo 25, just West of reference "H".

PICTURE #27, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) Photo location, reference "H". Full flow for "H" Conveyance loss measurement location.

PICTURE #28: FX 5-22-96. Photo's by RDH. Photo location SESE, S20, T4S, R9E., reference "I". Conveyance loss total from combined measurements "G" & "H".

PICTURE #23, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and to the East of reference "G1", (West culvert) water is forced both ways through culvert under Cold Springs Creek.

PICTURE #24: FX 5-22-96. Photo's by RDH. Second measurement for springs flows A61-10363. Near West culvert shown above.

PICTURE #21, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and reference "G1" for location. Measurement for springs flows A61-10363. Water is forced both ways in ditch, from 2+ well and/or, springs and/or Cold Springs Creek. Located in the NENE, S16, T4S, R9E.

PICTURE #22: FX 5-22-96. Photo's by RDH. Same area as in above photo, measurement location overlook, ditch on left flows both ways. View is to the South East.

PICTURE #19, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. Lower Cold Springs Creek P/D. Rock dam, located in the NESW, S10, T4S, R9E.

PICTURE #20: FX 5-22-96. Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and reference "G" for location. Full flow for lower West Ditch to section 29.

PICTURE #17, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "F" for location. First field on West side of Cold Springs Creek.

PICTURE #18: See conveyance loss diagram and reference "F" for location. Conveyance loss for West ditch.

PICTURE #15, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "E" for location. P/D of unnamed stream, see photo #8.

PICTURE #16: See conveyance loss diagram and reference "E" for location. Measurement adds .52 CFS to West Ditch.

PICTURE #13, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "D" for location. Conveyance loss for most East ditch.

PICTURE #14: See conveyance loss diagram and reference "C" for location. Conveyance loss for other East ditch.

PICTURE #11, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "B" for location. Full flow for upper P/D measurement.

PICTURE #12: See conveyance loss diagram and reference "A" for location. Full flow on West Ditch from upper P/D measurement.

PICTURE #9, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the channel of A61-11844 an unnamed stream. View is to the North of where this water co-mingles with the Cold Springs Creek West ditch.

PICTURE #10: This photo shows the upper area of the unnamed stream. An old homestead still remains. View is to the South.

PICTURE #7, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the East most upper fields in section 35, looking south on the East side of Cold Springs Creek.

PICTURE #8: This photo shows P/D of A61-11844 an unnamed stream. This water co-mingles with the Cold Springs Creek West ditch from upper P/D shown on photos #1 & #4.

PICTURE #5, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the plastic dam in the ditch from the upper P/D that allows the flow to the East ditch through the pipeline and/or the West ditch. Located on West side of Cold Springs Creek.

PICTURE #6: This photo shows the West ditch from the plastic dam shown in upper P/D ditch on photo #5.

PICTURE #3, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the gate valve that actually controls the flow in the pipeline on the West side of Cold Springs Creek. See photo #2.

PICTURE #4: This photo shows the upper P/D from the West side of Cold Springs Creek. Located in the NWSWNE, S35, T3S, R9E.

PICTURE #1, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the upper Cold Springs Creek P/D, view is to the South West. Located in the NWSWNE, S35, T3S, R9E.

PICTURE #2: This photo shows pipeline from the gate valve of above photo, this pipeline is for the East Side ditches. View is to the North West on East side of Cold Springs Creek.

XI.

That defendant A. T. Babb be and is hereby awarded the use of the waters of ~~Said~~ Cold Spring Creek, in each year, to wit:

61 0343 Thirty (30) inches dating from June 30th, 1888.

Said water to be measured at the point or points of diversion thereof from the channel of said stream, in a box or boxes, headgate or headgates, constructed for measuring water under a four inch pressure or its equivalent in second feet, and said water to be measured at said point or points under a four inch pressure or its equivalent in second feet.

XII.

That defehdant D. M. Keys be and is hereby awarded the use of the amount of waters of said Cold Spring Creek, in each year, to wit:

61 0344 One hundred anf fifty (150) inches dating from May 1st, 1893.

Said water to be measured at the point or points of diversion thereof from the channel of said stream, in a box or boxes, headgate or headgates, constructed for measuring water under a four inch pressure or its equivalent in second feet; and said water to be measured at the point or points of diversion under a four inch pressure, or its equivalent in second feet. Said water to be used upon his placer mining claim known as the "Cold Spring ^{placer} Claim".

XIII.

That defendant Thomas R. Stevenson be and is hereby awarded the use of the waters of said Cold Spring Creek, in each year, to wit:

61 0345 (a). For Schwartz Tract twenty-five (25) inches dated from June 30th, 1879,

46 (b). For Stevenson Desert Entry, thirty-five (35) inches dating from May 1st, 1885.

61 0339 five inches dating from May 1st, 1875. Said water to be measured at the point or points of diversion thereof from the channel of said stream in a box or boxes, headgate or headgates constructed for measuring water under a four inch pressure, or its equivalent in second feet, and said water to be measured at the point or points of diversion under a four inch pressure or its equivalent in second feet.

IX.

61 0340 That the defendant John C. Levere be and is hereby awarded the use of the waters of of said Cold Spring Creek in each year, to wit: Twenty-five (25) inches dating from June 30th, 1887; and six (6) inches dating from May 1st, 1887.

61 0364 Said water to be measured at the point or points of diversion thereof from said channel of said stream in a box or boxes, headgate or headgates, constructed for the measuring of water under a four inch pressure or its equivalent in second feet, and said water to be measured at said point or points of diversion, under a four inch pressure or its equivalent in second feet.

X.

That defendants J. J. ~~McGinness~~ and Ida McGinness be and are hereby awarded the use of the amount of waters of Cold Spring Creek, in each year, to wit:

61 0341 Sixty-one inches dating from June 30th, 1887. ~~Said water to be~~
61 0342 fifty-nine (59) inches dating from June 30th, 1887. Said water to be measured at the point or points of diversion thereof from the channel of said stream, in a box or boxes, headgate or headgates constructed for measuring water under a four inch pressure or its equivalent in second feet, and said water to be measured at said point or points of diversion under a four inch pressure or its equivalent in second feet

COLD SPRING CR.

point or points of diversion thereof from the channel of said stream in a box or boxes, headgate or headgates, under a four inch pressure, or its equivalent in second feet, and said water to be measured at said point or points of diversion under a four inch pressure or its equivalent in second feet.

VII.

That the defendant J. B. Stanfield be and is hereby awarded the use of the waters of said Cold Spring Creek, in each year, to wit:

61 0332 (a). For Cold Spring Ranch, one hundred and thirty-six (136) inches dating from May 18, 1875, which includes the water flowing from the Spring.

61 0333 (b). For the Stanfield-McAnulty Tract, twenty-seven (27) inches dating from May 1st, 1885; twenty-five (25) inches dating from May 1st, 1886; twenty (20) inches dating from May 1st, 1889 and forty (40) inches dating from May 1st, 1895

61 0334
61 0335
61 0336
61 0337 (c). For the Stanfield Desert Claim, one hundred and twenty (120) inches dating from December 1st, 1895.

All of said water awarded to said defendant to be measured at the point or points of diversion thereof from said stream, in a box or boxes, headgate or headgates, constructed for measuring water at a four inch pressure or its equivalent in second feet, and said water to be measured at said point or points of diversion, under a four inch pressure or its equivalent in second feet.

VIII.

That the defendants Elizabeth Walker, Charles H. Walker, Paul H. Walker, Victor Walker, Eugene Walker and May Epperson and Gilbert Walker, heirs at law of Charles H. Walker, be and are hereby awarded the use of the waters of said Cold Spring Creek, in each year, to wit: Ninety-two (92) inches dating from June 30th, 1870; seventy-

NOTICE OF CHANGE OF WATER RIGHT OWNERSHIP

RECEIVED

MAR 11 1997

Please print or type. Attach pages with additional information. Instructions are on the back of this page. **WATER RESOURCES
WESTERN REGION**
Incomplete forms will be returned.

1. Water Right Number(s) (LIST ATTACHED)
Adjudication Claim Number(s) _____
2. The following **REQUIRED** information must be submitted with this form.
 - A. A copy of the most recent DEED, TITLE POLICY, CONTRACT OF SALE, or other legal document indicating your ownership of the property and water rights or claims in question, WITH ATTACHED LEGAL DESCRIPTION.
AND
 - B. PLAT OF PROPERTY or SURVEY MAP for parcel of ten acres or less. (These are usually on file with the county.)
OR
 - C. For water rights or adjudication claims involving ten or more irrigated acres, a USDA Farm Service Agency (formerly ASCS) AERIAL PHOTO with irrigated acres outlined and point(s) of diversion clearly marked.
3. Name and Address of Former Owner/Claimant(s) WILLIAM H. MCGREW & HELEN BRANDT MCGREW
PO BOX 965 GLENN'S FERRY, ID 83623
4. New Owner/Claimant(s) CHARTER MOUNTAIN RANCH, INC.
Name connector (Check one): ☐ AND, ☐ OR, ☐ AND/OR
New Mailing Address PO Box 1656
City, State and ZIP Code St Croix, USVI 00851
New Telephone Number () -
5. Date you acquired the property 3-7-97
6. If you have acquired only a portion of the former owner's property, IDWR may need to split the water right(s) or adjudication claim(s). If this applies, describe in detail your portion of each water right or adjudication claim in the spaces below. If necessary, attach additional pages.
Number of acres actually irrigated _____ Number and type of stock _____
Diversion rate in CFS _____ Number of homes _____ Other uses _____
cubic feet per second
If a water right or adjudication claim is being split and you are not sure how to identify your portion of the original right or claim, please contact the nearest IDWR office for assistance.
7. Signature of New Owner/Claimant(s)  Date 3/7/97
Date _____
8. (Corporations or other organizations must submit a list of directors/officers demonstrating authority to sign form.)
For Snake River Basin Adjudication Claims: If you are represented by an attorney and you want IDWR to correspond directly with your attorney for all matters related to your claims, please attach a Notice of Appearance completed by your attorney.

ORDER OF PARTIAL DECREE

For Water Right 61-00339, 61-10363,

61-11844, 61-11847 and 61-11854

On June 19, 2002, a *Special Master's Report and Recommendation* was filed for the above water right. No Challenges were filed to the *Special Master's Report and Recommendation* and the time for filing Challenges has now expired.

Pursuant to I.R.C.P. 53(e)(2) and *SRBA Administrative Order 1*, Section 13f, this Court has reviewed the Findings of Fact and Conclusions of Law contained in the *Special Master's Report* and wholly adopts them as its own.

Therefore, IT IS ORDERED that water right 61-00339, 61-10363, 61-11844, 61-11847 and 61-11854 is hereby decreed as set forth in the attached *Partial Decree* Pursuant to I.R.C.P. 54(b).

DATED September 5, 2002

ROGER S. BURDICK

Presiding Judge

Snake River Basin Adjudication

PERMITTING
DIRK KEMPTHORNE GOVERNOR

KARL J. DREHER
DIRECTOR

**BRUCE SMITH
ROSHOLT, ROBERTSON & TUCKER
PO BOX 2139
BOISE, ID 83701-2139**

RE: CHARTER MOUNTAIN RANCH

Dear Bruce:

Enclosed for your review are the stockwater claims we prepared using the information you provided in draft claim form. Four of the claims represent groundwater as a source and two utilize Cold Springs Creek water. All of the claims describe de minimus use which is limited to 1000 head of stock, 13000 gallons per day and no more than .24 cfs diversion rate.

We prepared four groundwater and two surface water claims because the priority dates and places of use are different for each source as it relates to the respective points of diversion. As an example, the hot water wells and the cold water wells are two different sources and the places of use and priority dates are quite different for these two sources.

The places of use are based on the maps you submitted and describe land privately owned by Charter Mountain Ranch, Inc. If you or John Mc Callum want to include public land in the places of use we need your specific direction.

We can recognize the de minimus characteristics of each claim without any additional information. However, if John Mc Callum insists that the claims reflect more than 1000 head we will need evidence to substantiate that the larger number was in place as of the priority dates claimed.

The aesthetic and wildlife uses were not included because we do not recognize them as historical uses in beneficial use claims. The ponds described on your maps were constructed for other purposes, such as, cooling, commingling of sources, etc.. Rights for these two uses should be developed in the Application for Permit process rather than SRBA claims.

We received Notices of Error signed by John Mc Callum for the Charter Mountain Ranch, Inc and ARK, Inc. claims. In general, the notices disagree with the majority of the components we recommended and they all indicate our recommendations do not reflect historical use. It is our intention to not change any of our recommendations based on the Notices of Error filings. The elements in our recommendations reflect many hours of review, discussion, negotiation and field work and we believe are an accurate representation of the historical water usage for both ranches.

When you are ready to file the stockwater claims, the filing fee is \$25 each. They will have to

January 6, 1999

Page 2

be properly executed and filed by January 29, 1999 to be included in the director's report with the irrigation and other Basin 61 recommendations.

We still need a signed and notarized claim form for the groundwater expansion claim for irrigation, A61-11887. We will have to disallow this claim if we have not received a properly executed claim by January 29, 1999.

After your review of the enclosed claim forms, it would be beneficial to meet with you in person to discuss them. Call either of us at the 334-2190 to set an appointment time.

Sincerely,

Mel Schulte

Evening Telephone Number: 208-366-7931

1. Describe the portion of the proposed recommendation with which you disagree (e.g. priority date, period of use, source):

Quantity, Point of Diversion, Period of Use, Place of Use.

2. Describe the changes you wish to make in the proposed recommendation:

*Should be consistant with adjudication claim.**

** Subject to pending transfer application.*

3. Give a brief explanation as to why you disagree with these portions:

Because they don't appear to reflect Histrical use.

 I AGREE with this proposed recommendation; no changes need to be made.

Ref: Ownership changes

Dear Bruce Smith,

1. **ATTACHED** are copies of Cold Springs Creek and Little Canyon Creek claims which reflects the **CHANGE IN OWNERSHIP** for these irrigation water rights.
2. I have hand delivered a copy of these to John McCallum March 19, 1998. These copies are as the McGrew's have claimed them and do not reflect Department recommendations.
3. Mel Schulte and myself conducted a field exam today to determine conveyance loss for the "Hot Field Ditch". As soon as I calculate the ditch loss I will send you a draft **CLAIM** for this use.
4. If you have any questions concerning the enclosed claims, please feel free to contact me.

Sincerely,

A handwritten signature in cursive script that reads "Ron Howerton".

SUBCASE NOS.: See Attachment A

Case No. 39576

IDWR'S WITHDRAWAL OF NOTICES OF ADMINISTRATIVE PROCEEDINGS

TO ALL INTERESTED PARTIES:

PLEASE TAKE NOTICE that the Idaho Department of Water Resources (IDWR) hereby withdraws its Notices of Administrative Proceedings (NAP) for the subcase numbers identified on "Attachment A".

The NAP's in these subcases are being withdrawn at this time since any administrative actions on these water rights will proceed once the partial decrees have been issued.

Dated this 12th day of April, 2002.

Subject: RE: Today's Meeting With Bruce Smith

Whoops. Forgot 61-10363 -- change priority date to 2/15/1870.

-----Original Message-----

From: McHugh, Candice
Sent: Tuesday, November 27, 2001 3:02 PM
To: Howerton, Ron; Schulte, Mel; Harvey, Becky
Subject: Today's Meeting With Bruce Smith

I thought today's meeting was very productive. We resolved 22 subcases and 2 are likely to be resolved with little effort. That only leaves the stockwater rights and 4 other water rights left. YAY!!!

To recap what we are going to need to do in the next week or so:

Becky -- Prepare SF5s to dismiss objections to 61-2199, 2100, 11887 and motions w/ language regarding the SOU Motion for 61-2111 and 11885.

Ron/Mel -- Prepare SF5 attachments for the following:

61-301 -- split into a and b. We will hold the filing of this until we receive the relinquishment form for 61-7288
61-332, 333, 334, 335, 336, 337, 338, 339, 340, 343, 364 -- drop the 3.7 acres and reduce quantity. Total acres will be 1368 with a total quantity of 16.95 cfs. We need to make sure any other overlapping rights, contested or uncontested, have the remarks changed as necessary.

61-2008 -- reduce quantity and drop 3.7 acres and quantity.

61-2095, 2209 -- split rights with BLM. Continue both rights and their splits as a PPOU with the other rights, get help from Don regarding the remarks if there are any questions.

61-11847 -- remove the quantity remark

Did I miss anything? If so, let me know.

Thank you.

Candice

Amended Director Report

*** Your question if splitting 61-2008 between BLM and Bruce would be ok per their agreement?

Answer: No.

1. The BLM tract was never a part of license 61-02008.
2. The BLM tract T04S, R09E, SENE, was never a part of the recommendation for right 61-02008 for Charter Mountain Ranch Inc.

PHOTO'S

PICTURE #35, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. DUPLICATE photo of photo 34, with no ink marks. This photo shows two points of diversion in the NENW of S10, T4S, R9E. West P/D is a plastic dam, East P/D is a gravel rock diversion with a control headgate further down. View is to South.

PICTURE #36: FX 5-28-96. Photo's by RDH. Natural channel & Ditch of Cold Springs Creek point of diversion, located in the NWNE of S10, T4S, R9E.

PICTURE #33, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. Ditch from Cold Springs Creek upper point of diversion shown in photo's 1 & 4. Photo location, SWSE, S3, T4S, R9E. Ditch flows through several wet spots or spring like areas that are a part of Cold Spring Creek taking advantage draining them. This ditch water flows in and out of natural channels of Cold Springs Creek and diverted out at points of diversion recommended in the NENW & NWNE of S10, T4S, R9E. See photo's 34, 35 & 36.

PICTURE #34: FX 5-28-96. Photo's by RDH. This photo shows two points of diversion in the NENW of S10, T4S, R9E. West P/D is a plastic dam, East P/D is a gravel rock diversion with a control headgate further down.

PICTURE #31, COLD SPRINGS CREEK: FX 5-28-96. Photo's by RDH. Collection culvert from Distribution Pond. (Piped underground from Distribution Pond). This is a pressurized system for sprinklers, it is used in conjunction with gravity flows through culverts and the ditch shown in photos 23 & 24 from the Distribution Pond.

PICTURE #32: FX 5-28-96. Photo's by RDH. A Spring location that has been identified as part of the Cold Springs Creek water in prior Cold Springs Creek decree. No precise point of diversion, water is drained from a large area located in S2 & S3, T4S R9E. View is from access road on the East looking to West.

PICTURE #29, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. POU
view from the NENE corner of S29 to the SW.

PICTURE #30: FX 5-22-96. Photo's by RDH. POU photo, located at
first cut-off ditch in S29, view is from East to West.

PICTURE #25, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) Photo location, North of reference "H". Ditch from distribution pond in center of photo into what may have been considered in the past as part of Cold Springs Creek. This channel cannot receive water directly from Cold Springs Creek, only used as a conveyance for the ditch and waste water from the field. This ditch has 2+ well water, spring water and Cold Springs Creek water. The ditch can be filled to max with either 2+ well water or Cold Springs Creek water alone. Per John McGrew. Location of POU shown SWNE & SENE, S16, T4S, R9E.

PICTURE #26: FX 5-22-96. Photo's by RDH. Same ditch shown below photo 25, just West of reference "H".

PICTURE #27, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) Photo location, reference "H". Full flow for "H" Conveyance loss measurement location.

PICTURE #28: FX 5-22-96. Photo's by RDH. Photo location SESE, S20, T4S, R9E., reference "I". Conveyance loss total from combined measurements "G" & "H".

PICTURE #23, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and to the East of reference "G1", (West culvert) water is forced both ways through culvert under Cold Springs Creek.

PICTURE #24: FX 5-22-96. Photo's by RDH. Second measurement for springs flows A61-10363. Near West culvert shown above.

PICTURE #21, COLD SPRINGS CREEK: FX 5-22-96 . Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and reference "G1" for location. Measurement for springs flows A61-10363. Water is forced both ways in ditch, from 2+ well and/or, springs and/or Cold Springs Creek. Located in the NENE, S16, T4S, R9E.

PICTURE #22: FX 5-22-96. Photo's by RDH. Same area as in above photo, measurement location overlook, ditch on left flows both ways. View is to the South East.

PICTURE #19, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. Lower Cold Springs Creek P/D. Rock dam, located in the NESW, S10, T4S, R9E.

PICTURE #20: FX 5-22-96. Photo's by RDH. See (System Diagram Below 2+ Well & Distribution Pond) and reference "G" for location. Full flow for lower West Ditch to section 29.

PICTURE #17, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "F" for location. First field on West side of Cold Springs Creek.

PICTURE #18: See conveyance loss diagram and reference "F" for location. Conveyance loss for West ditch.

PICTURE #15, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "E" for location. P/D of unnamed stream, see photo #8.

PICTURE #16: See conveyance loss diagram and reference "E" for location. Measurement adds .52 CFS to West Ditch.

PICTURE #13, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "D" for location. Conveyance loss for most East ditch.

PICTURE #14: See conveyance loss diagram and reference "C" for location. Conveyance loss for other East ditch.

PICTURE #11, COLD SPRINGS CREEK: FX 5-8-96. Photo's by RDH. See conveyance loss diagram and reference "B" for location. Full flow for upper P/D measurement.

PICTURE #12: See conveyance loss diagram and reference "A" for location. Full flow on West Ditch from upper P/D measurement.

PICTURE #9, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the channel of A61-11844 an unnamed stream. View is to the North of where this water co-mingles with the Cold Springs Creek West ditch.

PICTURE #10: This photo shows the upper area of the unnamed stream. An old homestead still remains. View is to the South.

PICTURE #7, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the East most upper fields in section 35, looking south on the East side of Cold Springs Creek.

PICTURE #8: This photo shows P/D of A61-11844 an unnamed stream. This water co-mingles with the Cold Springs Creek West ditch from upper P/D shown on photos #1 & #4.

PICTURE #5, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the plastic dam in the ditch from the upper P/D that allows the flow to the East ditch through the pipeline and/or the West ditch. Located on West side of Cold Springs Creek.

PICTURE #6: This photo shows the West ditch from the plastic dam shown in upper P/D ditch on photo #5.

PICTURE #3, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the gate valve that actually controls the flow in the pipeline on the West side of Cold Springs Creek. See photo #2.

PICTURE #4: This photo shows the upper P/D from the West side of Cold Springs Creek. Located in the NWSWNE, S35, T3S, R9E.

PICTURE #1, COLD SPRINGS CREEK: FX 4-30-96. Photo's by RDH. This photo shows the upper Cold Springs Creek P/D, view is to the South West. Located in the NWSWNE, S35, T3S, R9E.

PICTURE #2: This photo shows pipeline from the gate valve of above photo, this pipeline is for the East Side ditches. View is to the North West on East side of Cold Springs Creek.

WELL Plot

Datum : NAD-27 CONUS
Coordinate System : Latitude/Longitude
Altitude Mode : Height Above Ellipsoid
Altitude/Distance Units : Feet
Velocity Units : Feet/Second

Max Carrying Flow = 5.38 CFS (269 INCHES)
Max Well Flow = 6.25 CFS (312.5 INCHES)

6. The next step was to find the number of acres irrigated as the beneficial use, the beneficial use was found to be 246 acres or 4.92 CFS.
7. Thus, the right A61-00301 could be recommended for an inch per acre, plus any additional flow such as the conveyance ditch loss flows up to the maximum carrying flows of the two ditches below the two plus well. Total of 5.38 CFS or 269 inches. See item #2.
8. The ditch loss was measured at 0.85 CFS. See item #3.
9. Thus, then conveyance loss (up to 0.85 CFS) could be added to the 4.92 CFS to bring the maximum carrying flow of 5.38 CFS. See item #2 **MAX CARRYING FLOW = 5.38 CFS (269 INCHES)**

thus;

246 ACRES IRRIGATED =	4.92 CFS (246 INCHES)
(+) CONVEYANCE LOSS =	<u>0.46 CFS (23 INCHES)</u> out of 0.85
	<u>5.38 CFS RECOMMENDED</u>

10. Total CFS RECOMMENDED is 5.38 CFS that includes 0.46 CFS of ditch loss.

TWO PLUS WELL CAPACITY & MAXIMUM DITCH CARRYING FLOWS

March 28, 1997

INFORMATION COMPILED BY: RON HOWERTON & MEL SCHULTE

- * Photos and notes are in Cold Springs Creek field exam 3-ring binder notebook & two plus well folder, A61-00301.
- 1. The maximum well open flow measurement was measured on 3/27/97 by: RON HOWERTON & MEL SCHULTE at 6.25 CFS or 312.5 inches.
- 2. The maximum carrying flows of the two ditches below the two plus well were measured on 5/22/96. See photo 20, (Map Reference G) 2.25 CFS and on cross ditch photo 21, (Map Reference G1) of 3.13 CFS, total of 5.38 CFS or 269 inches.
- 3. Conveyance ditch loss was measurements were made from the West Ditch, Photo 20, (Map Reference G) at 2.25 CFS and from the East Ditch that is re-directed back into across Cold Springs Creek 1.73 CFS (Map Reference H) photo 27, for a total of 3.98 CFS. The maximum conveyance ditch loss was measured at 3.13 CFS (Map Reference I) photo 28, all three measurements were made on 5/22/96.

	3.98 CFS
-	<u>3.13 CFS</u>
=	<u>0.85 CFS MAXIMUM CONVEYANCE DITCH LOSS FROM TWO PLUS WELL</u>

RECOMMENDATIONS

During the field exam of 5/22/96, the ditches were at maximum flow with Cold Springs Creek Water and flow from several Springs. We asked John MC GREW if the Two Plus Well alone could fill the ditches the same. He said yes.

- 4. The first step was to see how much was in these ditches at the maximum carrying flows of measured on 5/22/96. Photos 20 & 21. 2.25 CFS on cross ditch of 3.13 CFS. The total was 5.38 CFS or 269 inches. See item #2.
- 5. Then the follow-up to this was to make an actual measurement of the Two Plus well next year (1997) at its peak flow in the spring before irrigation season. The maximum well open flow measurement was measured on 3/27/97 at 6.25 CFS or 312.5 inches. Thus, we proved that yes, the Two Plus Well could fill the ditches as full as our maximum carrying flow measurement on 5/22/96.

Max Carrying Flow = 5.38 CFS (269 INCHES)
Max Well Flow = 6.25 CFS (312.5 INCHES)

6. The next step was to find the number of acres irrigated as the beneficial use, the beneficial use was found to be 246 acres or 4.92 CFS.
7. Thus, the right A61-00301 could be recommended for an inch per acre, plus any additional flow such as the conveyance ditch loss flows up to the maximum carrying flows of the two ditches below the two plus well. Total of 5.38 CFS or 269 inches. See item #2.
8. The ditch loss was measured at 0.85 CFS. See item #3.
9. Thus, then conveyance loss (up to 0.85 CFS) could be added to the 4.92 CFS to bring the maximum carrying flow of 5.38 CFS. See item #2 MAX CARRYING FLOW = 5.38 CFS (269 INCHES)

thus;

246 ACRES IRRIGATED =	4.92 CFS (246 INCHES)
(+) CONVEYANCE LOSS =	<u>0.46 CFS (23 INCHES)</u> out of 0.85
	<u>5.38 CFS RECOMMENDED</u>

10. Total CFS RECOMMENDED is 5.38 CFS that includes 0.46 CFS of ditch loss.

TWO PLUS WELL CAPACITY & MAXIMUM DITCH CARRYING FLOWS

March 28, 1997

INFORMATION COMPILED BY: RON HOWERTON & MEL SCHULTE

- * Photos and notes are in Cold Springs Creek field exam 3-ring binder notebook & two plus well folder, A61-00301.
- 1. The maximum well open flow measurement was measured on 3/27/97 by: RON HOWERTON & MEL SCHULTE at 6.25 CFS or 312.5 inches.
- 2. The maximum carrying flows of the two ditches below the two plus well were measured on 5/22/96. See photo 20, (Map Reference G) 2.25 CFS and on cross ditch photo 21, (Map Reference G1) of 3.13 CFS, total of 5.38 CFS or 269 inches.
- 3. Conveyance ditch loss was measurements were made from the West Ditch, Photo 20, (Map Reference G) at 2.25 CFS and from the East Ditch that is re-directed back into across Cold Springs Creek 1.73 CFS (Map Reference H) photo 27, for a total of 3.98 CFS. The maximum conveyance ditch loss was measured at 3.13 CFS (Map Reference I) photo 28, all three measurements were made on 5/22/96.

	3.98 CFS
-	<u>3.13 CFS</u>
=	<u>0.85 CFS MAXIMUM CONVEYANCE DITCH LOSS FROM TWO PLUS WELL</u>

RECOMMENDATIONS

During the field exam of 5/22/96, the ditches were at maximum flow with Cold Springs Creek Water and flow from several Springs. We asked John MC GREW if the Two Plus Well alone could fill the ditches the same. He said yes.

- 4. The first step was to see how much was in these ditches at the maximum carrying flows of measured on 5/22/96. Photos 20 & 21. 2.25 CFS on cross ditch of 3.13 CFS. The total was 5.38 CFS or 269 inches. See item #2.
- 5. Then the follow-up to this was to make an actual measurement of the Two Plus well next year (1997) at its peak flow in the spring before irrigation season. The maximum well open flow measurement was measured on 3/27/97 at 6.25 CFS or 312.5 inches. Thus, we proved that yes, the Two Plus Well could fill the ditches as full as our maximum carrying flow measurement on 5/22/96.

CLAIM/WR NO: Mc Grew Claims
AGENT: RON HOWERTON
DATE: February 7, 1996
REF: System Map

1. Met with John Mc Grew at the ASCS office in Mountain Home at 1:30.
2. Mel and Lori had set up an appointment to met with John Mc Grew and Jackie a representative for the NRCS, Natural Resources Conservation Services.
3. John plotted the system on ASCS maps for land sold to Powers from Mel and plotted surface water systems and GW on their remaining lands.
4. Jackie gave Lori a copy of the mainline system for the Cold Springs area.

AFFIDAVIT

John W. McGrew, being first duly sworn, deposes and says:
The western mainline from the well identified by Ident.
Number A61-02199 was constructed in 1977 and was in use when
my parents acquired the property in 1979. We constructed
the eastern mainline and placed it into use in 1981. This
well is currently pumped by a 250 horse power motor. This
second mainline did not change the place of use.

The mainline from the well identified by Iden. Number A61-
02095 was constructed and placed into use by us in 1984.
This well is currently being pumped by a 100 horse power
motor.

The mainline constructed in 1977 and the one constructed in
1984 added new acreage to the place of use of both the above
described wells.

Dear Mel,

Enclosed please find my affidavit with supporting documents consisting of aerial photographs from 1977 and 1984 showing the mainlines constructed in those years and laterals in place. An aerial photo from 1981 is not readily available, though I could get one from 1984 which shows the 1981 mainline with laterals. My understanding is that the 1981 mainline did not significantly change the place of use. I have enclosed a depreciation schedule which shows the welding as done by 3-81 so that you are not relying entirely on my memory as to the date. If you need any thing more, please tell me.

Sincerely,

John McGrew

MEMO TO FILE

DATE

November 26, 1996

CUSTOMER

John McGrew

SUBJECT: Meeting at Mtn. Home FSA building at 2PM with John McGrew, Ron Howerton & Mel Schulte.

1. We brought colored maps of areas we will recommend to show John to see if he was in agreement and or seen anything that we missed to bring to our attention.
2. John wanted us to look at 2 possible spring areas for possible source for additional claims or add to existing claims. One spring has a local name of Babs Spring by pond. We will follow up with this ASAP.
3. We discussed the filing of a new application for groundwater on acres that couldn't be covered by existing groundwater rights. Mel is preparing the application.
4. John looked at the PPOU area outlined by the KEY map and Supplemental Map "A" for Cold Springs Creek and asked if any Cold Springs Decreed water remained on any of the ground that his mainline from well "A" served where the pivot area was?
 - a. We answered no, because when he put the Western mainline system to these lands for sprinkling in 1977, the well water was modified to not be delivered with Cold Springs water to these lands anymore. Thus, since 1977 the Cold Springs water had not been a beneficial use to the area served by the Western mainline since 1977. John acknowledged this.
 - b. For additional support we have copies of his letter dated August 13, 1996 with affidavit dated August 14, 1996 that references the Western Pipeline.
5. Advised John that we intend to disallow the domestic claim at Little Canyon Creek Ranch, because the use appeared to be abandoned. John acknowledged this.
6. Advised John that we intend to disallow the spring claim on BLM ground referenced as license number 61-02020. That usage was replaced by claim A61-11844. John acknowledged this.

AFFIDAVIT

John B. McCallum being first duly sworn deposes and says:

1. We purchased the ranch in early 1997
2. I used the existing diversion ditch in April and May 1997.
3. In June 1997 a 8 inch pipe was installed and the water diverted for the remainder of 1997, 1998, 1999 and 2000.
4. We plowed the field in 1998 and destroyed part the ditch.
5. When the road was graded we removed the culvert in 1998.

Please note the attached drawing.

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT
OF THE STATE OF IDAHO, IN AND FOR ELMORE
COUNTY.

Paul H. Walker,
Charles H. Walker
Eugene Walker and
Gilbert Walker,
Plaintiffs

vs.

Daniel McGinness
Defendant.

JUDGEMENT AND DECREE.
x

And now this case coming on to be heard upon the findings of fact and conclusions of law herein filed, and the Court being fully advised in the premises, it is ordered, adjudged and decreed.

1. That the nine hundred inches of water, the prior right to the use of which was adjudged and decreed to Daniel McGinness under and by virtue of that certain judgement and decree duly rendered and filed on the 12th day of August, 1891, in the District Court of the Fourth Judicial District of the State of Idaho in and for Elmore County in an Action pending therein wherein Daniel McGinness was plaintiff and Samuel A. McNulty and others were defendants, shall be measured under a four inch pressure at a point on said Cold Spring Creek at the head of the big or main Ditch of said Daniel McGinness near the mouth of the canyon on said Creek above the lands of said Daniel McGinness in said Elmore County, State of Idaho.

2. That the water of Cold Spring Creek awarded to the said Daniel McGinness under and by virtue of a certain decree entered on the 10th day of May, 1899, in the District Court of the Fourth Judicial District of the State of Idaho, in and for Elmore County, in an action wherein Daniel McGinness and others were plaintiffs and James Stanfield and others were defendants, shall be measured for use on Daniel McGinness's homestead at the point of diversion of said waters, which point is at a point in the channel of said Cold Springs Creek at or near the north line of the South West Quarter of the South West Quarter of Section Twenty-eight, Township four South of Range

Re: McCallum's Transfer Pages: 4

CC: Steve Lester

☐ Urgent ☐ For Review ☐ Please Comment ☐ Please Reply ☐ Please Recycle

Notes: Mel and I have reviewed the Attachment lists for John McCallum's transfer application.

The attachments are marked with what we think would be included or not included for the transfer.

A61-XXXXXX should be filed prior to the transfer for groundwater enlargements.

The application for permit on file can be amended for the additional acres not covered by historical rights or the enlargement claim.

We will not re-negotiate the 1351.5 acre estimate at this time.

File the transfer and let the transfer process determine the POU description.

You have the options of filing the transfer with the 1400 POU or filing it with our 1351.5 acre POU.

What is important at the present is to file the transfer application.

CONFIDENTIAL

Re: Unauthorized Diversion of Water from Cold Springs Creek

Dear Mr. McCallum:

On June 16, 1999, Dan Nelson, an employee of the Idaho Dept. of Water Resources (IDWR), visited with you about use of water that was leased to Magic West through the Water Bank. On the same day, Nelson also investigated a reported unauthorized diversion of water from Cold Springs Creek, located in the SW1/4SE1/4 of Section 32, T04S, R09E, irrigating lands located in the SE1/4 of Section 32, T04S, R09E, and the NE1/4 of Section 5, T05S, R09E. Nelson found a pump with a diesel motor, and evidence that a mainline had supplied water to lands located on both sides of the Cold Springs Creek. I understand that you own the land where the water was diverted and used.

You are identified as the owner of several water right claims filed in the Snake River Basin Adjudication (SRBA) that describe portions of nearby lands as a place of use. Six of the claims (A61-00309, A61-00312, A61-00316, A61-00238, A61-10578, A61-10579) assert the right to divert water from Cold Springs Creek. The claims assert the right to divert water in the NW1/4SE1/4 of Section 32, T04S, R09E. This property is owned by Harly Riggs, and an old diversion structure is located on the Riggs property. The claims do not describe a point of diversion in the SE1/4 of Section 32.

IDWR has recommended to the SRBA Court that the claims described above and other claims irrigating the property from other sources be disallowed.

John McCallum
July 14, 1999
Page 2

Based on the investigation and IDWR's records, I conclude that you are diverting water from Cold Springs Creek from an unauthorized point of diversion. If you do not identify a water right authorizing diversion of water at the location of the diesel pump, you must cease diverting water from Cold Springs Creek at that location. IDWR will instruct the watermaster to close the diversion, chain and lock any control structure, and post the diversion with notice that the diverting works cannot be tampered with. Furthermore, IDWR may issue a notice of violation for illegally diverting water from Cold Springs Creek at a location not authorized by any water right, or alternatively, may seek an injunction in the District Court of the State of Idaho, as authorized by Idaho Code § 42-1701B.

Respectfully,

Re: *Charter Mountain Ranch and ARK, Inc.*
Notices of Error

Dear Ron:

In your letter of January 6, 1999, you indicated that the Department did not intend to change any of the above recommendations because you believed the recommendations were correct. The letter also indicated that the Notices of Error applied to most components of the recommendations. The Notices of Error actually only applied to a limited number of the components. The information on the Notices was set out as it was because of the complexity of the information in the recommendation, and it was our understanding that you wanted individual meetings on these types of complex claims. Based on that, we did not attend the Notices of Error meeting in Mountain Home. We believe the changes can be addressed fairly easily and would still like to meet with you to discuss them and resolve the differences before the Director's report comes out. Thanks.

Sincerely,

Bruce M. Smith

MEETING:

CUSTOMER

BRUCE SMITH, TERRY SCANLAND

SUBJECT: COLD SPRINGS RANCH (John MC Callum's Charter Mountain Ranch)

Mel, Steve & myself met with Bruce Smith and Terry Scanland at 1:30 in Western's conference room.

We discussed enlargement and related issues pertaining to a 5 page draft transfer to put all his water sources into a common system.

The big point of contention is of the Hot Field lands below the

Walker well. Mel, Steve and I believe that our IDWR attorney's will need to be aware of this point of contention and reach a conclusion to whether these lands have any beneficial rights for irrigation to claim.

We have an appointment set for December 5, 10 AM at western to meet with John Marshall and possibly Peter Anderson.

Also, requested Bruce Smith to get proof of ownership for 2 $\frac{1}{4}$ tracts in the Cold Springs PPOU and also to let me know whether to recommend 2 other tracts that I found irrigation in on public land.

From: DWR03::DSHAFF 16-NOV-1998 12:09:20.52
To: DWR80::RHOWERTO
CC: DSHAFF
Subj: A61-02111

Hi Ron,

First the line was busy (not surprised) and then you were not there. Let me shed some thoughts on your question by e-mail.

Sounds like the recommendation can be limited to 215 acres. Of course now we have a specific season to show and have decreed. Particularly with the objectives of the claimant for early irrigation season use, you would add Standard USE Remark S03.

Those details solved, we get down to numbers in your 12/10/97 memo. I find an error in using the licensed calculated volume/acre ($499.5 \text{ Acres} / 436.6 \text{ AF} = .08770741$) and multiplying it times the present number of acres to arrive at a new volume (188 AF). Just as a user can take a given diversion rate and apply it to fewer acres, the volume can also be applied to fewer acres. The $2.02 + \text{AF/day}$ is theoretically correct, however, the user was issued a license for 436.6 AF. This proportional volume would provide a 215 day irrigation season ($436.6 \text{ AF} / 2.02 + \text{AF/day} = 215.8 \text{ days}$). WhaLa, 4-01 to 11-01.

I have not addressed the additional claim (?) and conveyance loss. I do not think this was the point of your FAX.

If you want to talk more about recommending this claim, give me a call this after 2 o'clock today. Thanks, Don

*can loss proof
proof of use for Lic would be DOP?
not, because sys to develop*

FR: RON HOWERTON

RE: Season of use & conveyance loss for license/claim A61-02111

Mel and I met with Peter Anderson and John Marshall, Friday the 5th of December. We asked them to give us direction on how we might recommend season of use. HOWEVER, THEY WANTED ME TO ASK YOU HOW WE COULD HANDLE THIS SINCE ALL NEW DECREED IRRIGATION RIGHTS LIST ONLY IRRIGATION SEASON???

AS BRIEF STATEMENT AS POSSIBLE FOLLOWS:

This license has been historically used as an early season floodwater right from Cold Springs Creek according to the new owners irrigator. It has a DOP of July 5, 1955. It was licensed for 1.02 CFS for 499.5 acres and overlapped groundwater irrigation from the Walker geothermal well. However, an accomplished transfer occurred in 1979 and moved the Walker well irrigation acres to the another well and new acres. According to their irrigator, he continued to use the surface water license for early season water.

Peter and John felt that this right could be still recommended for the CFS on the license and with the acres (215) that were historically irrigated for early season irrigation. However, with a limitation to a short irrigation season based on the number of days that the licensed diversion rate would fulfill the annual diverted volume.

NEW RIGHT FOR CONVEYANCE LOSS:

Also, we discussed the fact that for the license to be delivered from Cold Springs Creek, (2 miles plus) it would need an additional claim for just conveyance loss, based upon beneficial use since the DOP of the License. We discussed there were other licenses on different Cold Springs lands that possibly could be claimed as an accomplished transfer for the conveyance loss. However, they felt that USING other licenses for the conveyance loss, wasn't historically correct and a beneficial use right for the conveyance use was more valid.

CALCULATIONS:

436.60= VOLUME ON LIC

499.5 ACRES ON LIC = (.8770741) (215 historical acres)= 188 AFA

CONVERT CFS TO VOL in AF/day: 1.02 CFS X 1.9835 = 2.02 AF PER DAY

188 AF= HISTORICAL VOLUME @ 2.02 AF/day = 93 DAYS FOR IRR SEASON.

Question: How do we structure the two claims mentioned above to reflect early season period of use in our recommendations? Our concern is the courts partial decree will specify "Irrigation Season" for the period of use which conflicts with our intentions to have a shortened specific period of use.

P.O. Box 83720
Boise, ID 83720-0098

ATTN: Mr. Saxton

Dear Mr. Saxton:

We have two separate and different situations.

First, we will consider the application for storage. As you state, the department has held hearings and rehearings on our application *for Permit No. 61-07393. Our application was approved in both hearings. Before any progress could be made, it was discovered that Lee Trail had a prior application for transfer and storage of Cold Springs Creek Water which was pending. This application was kicked back and forth between the BLM and Idaho Water Resources with no decision made but keeping the situation alive. At this point in time, Dave Tuthill informed me that the Lee Trail application was terminated and we were now first in time. However, the moratorium caused by the Swan Falls controversy made it impossible to proceed. To my knowledge this is where the situation stands. We are still interested in this project. What is a sufficient showing of our interest?

The other issue concerns a well that has been called the 2+ well. Since the 2+ well was determined to be in the same aquifer as the Gill and Walker wells, I never expected to be granted the 16 cubic feet of water as applied for originally. For twenty years, we have been using the 2+ well in lieu of the Walker hot well, which has essentially ceased to flow. I would assume that we need official approval of this procedure. I have been attempting to bring you up to date on some of the history of these two applications of which you may not have been aware.

If you have further questions concerning our interest in these applications, we would be glad to accommodate you. We received your June 7, 1996 letter this past week. I have been ill lately and not able to respond promptly.

Sincerely,

W. H. McGrew

Memo:

To: Mel Schulte, Ron Howerton, and Lori Graves

From: Shane Bendixsen

Subject: Lee, Walker, and Two-Plus Wells.

Problem:

The subject area is located approximately 13 miles east of Mountain Home, Idaho in T4S, R8&9E (see Figure 1). Currently three artesian wells are completed in the area which draw upon the same aquifer (the Lee, Walker, and Two-Plus.) The Lee well is decreed for 1,125 miners inches or 22.5 cubic feet per second (cfs). This is also equivalent to 10,098 gpm. It is my understanding this is considered much more than could ever be used. Therefore a more accurate estimate of the Lee well capacity is needed.

Aquifer Description:

Castelin (1993), characterized the system as a confined geothermal system in "fracture-dominated silicic-volcanic rock system". He also stated that work done by Anderson (1964) produced the most reasonable transmissivity (T) value at approximately 30,000 gallons per day per foot (gpd/ft). Other pump tests have produced higher T values, but those were short term tests and no negative boundaries were encountered as would be present throughout an irrigation season. Storativity was estimated at 0.00006 (i.e. a confined system).

Method:

Aquifer head values in the spring of 1993 measured by Castelin (1993) and in 1964 measured by Anderson (1964) were approximately 100 feet above land surface at the Lee well or at an elevation of approximately 3495 feet. Castelin (1993) also noted and approximately documented seasonal potentiometric (pressure) fluctuations in the three wells. Therefore a mathematical model that approximates the seasonal potentiometric surface should provide some estimate for previous flow rates. Data are not available to create a numerical model, but data are sufficient for a simple analytical model. Work completed by Anderson (1964), and Castelin (1978 & 1993), provide ample data as long as several assumptions are made.

The method chosen for this study was based on Theis (1935). The reader is referred to Freeze and Cherry (1979, p. 317) for a further explanation. Assumptions are:

- the aquifer has infinite areal extent, is homogeneous with uniform thickness, is confined and the potentiometric surface is horizontal.
- the pumping rate is constant, ground water flow is horizontal, and the well fully penetrates the aquifer.

While not all of these conditions are met, an adequate approximation can be made. Aquifer thickness was approximated at 500 feet based on well construction data. The growing season, or the length of time at which the wells would flow, was estimated at 210 days based on work completed by Everson and others (1978). It was also assumed that the wells were equipped with pumps and would continue to flow even after the potentiometric surface fell below the well head elevation.

"QuickFlow" Analytical Ground Water Flow Model by Geraghty & Miller (1991) was used for computations. The reader is referred to Geraghty & Miller (1991) for model verification.

Results:

Figure 1, "Section A-A'" presents potentiometric contours and a cross-section based on the models results. Note this is not a geologic cross-section. The flow rates for the Lee well (1.6 cfs) and the Two-Plus well (1.0 cfs) closely match the potentiometric drawdowns observed by Castelin (1993). The Walker would cease flowing, the Two-Plus well was close to a no flow condition, and the Lee well would still flow, but lost considerable head.

Assuming land irrigated with the Lee well is 319 acres and for the Two-Plus is 246 acres, this would correspond to an discharge rate of approximately 2.1 and 1.7 acre feet per acre (AF/A) respectively. Work completed by Allen and Brockway (1983) suggest an average consumptive use for the area of approximately two AF/A. This assumes the crops grown are potatoes, grains, and hay. Pasture and some other crops would have a higher consumptive use. Therefore the flow rates closely approximate the consumptive use. The model assumes 210 days of continuous flow at the same rate. Actual flow associated with the application rate may be much higher (i.e. a inefficient delivery system will greatly increase the application rate).

Figure 2, "Section B-B'", presents the same wells flowing for the same amount of time, but with an discharge rate of three AF/A (2.3 cfs and 1.8 cfs for the Lee and Two-Plus wells respectively). Note that the Two-Plus well would cease flowing.

Therefore it is unlikely the actual diversion rate has ever exceeded 3 AF/A.

As a point of interest (Figure 3, "Section C-C'"), if the Lee well was pumped at 22.5 cfs the model suggests that the potentiometric surface would fall below the well head elevation for both the Lee and Walker wells within the first 24 hours. The Two-Plus well would cease flowing after approximately seven days. Conversely, if the Two-Plus well was pumped at 22.5 cfs, the same would be true except the Lee well would not cease flowing until after 35 days.

Data are not available to exactly determine what the previous flow rate for the Lee well has been. Data are available though to suggest that it has been greater than 1.6 cfs (2.1 AF/A) and less than 2.3 cfs (3 AF/A). This also assumes that land use has not changed.

MEMORANDUM

TO: Lee-Walker-Hall File

FROM: Paul Castelin

DATE: March 24, 1993

SUBJECT: Results of field visit March 23, 1993

Ken Neely, Lori Graves and I met initially with Bill McGrew, the owner of the wells that we wanted to visit, about 9:00 a.m. The purpose of the visit is to determine what needs to be done in order to conduct a water rights licensing exam on Bill McGrew's Two-Plus well. The well is a geothermal well in a confined aquifer with some pressure at land surface, with no pump, so an exam will need to determine an appropriate sustained rate that the well can be licensed for. Bill's wife took us to the Lee, 2+, and Walker wells. Later, we met with John McGrew, who returned with us to the Walker well and then took us to the Ross well. All wells were located using a Trimble GPS receiver; locations given below are approximate. Pressure readings were done with a Weksler 30-psi liquid-filled gage. Bill McGrew - 366-2480; John McGrew - 366-2201.

Lee Well: 4S-8E-01dba; about 3400 foot elevation. 12-inch diameter production casing, 14-inch surface casing. Under considerable pressure, valves leaking big time (>50 gpm), in need of immediate repair. No place for suitable temperature or pressure determination. Flexible hose coupling on well head can be used for future pressure readings during a well test, but will require the fitting of a 3¼-inch male 3-4 inch nipple, with sufficient reducers to bring orifice down to ¼-inch NPT.

Two-Plus: 4S-9E-09dda; about 3440 elevation. Has brass stopcock and gage (inoperative) on top casing flange. Pressure measured at 12psig, at 10:30 a.m. 3/23/93, with the 1¼-inch discharge on the north side of the casing open, flowing 20-30 gpm. Shut-in pressure showed no change on the gage. Temperature measured at the 1¼-inch discharge pipe was 59°C. (138°F.). The discharge pipe is 11 inches in diameter, about 5 feet long, with the discharge valve at the extreme outboard end. To equip the well for discharge measurements, an extension at least 6 feet long with either a threaded or flanged end will need to be installed, incorporating a pressure port at the horizontal midline of the pipe extension, about 4 feet downstream of valve. John McGrew is interested in building one for us, especially since it can also be used to adjust discharge from the well for normal operations.

Walker: 4S-9E-08aba; about 3470 elevation. Casing diameter is 14-inch, with two discharge pipes exiting the casing to the west. One discharge line (the upper) is 14 inch O.D., reducing by means

of a flange to about 11 inches O.D., in which line a valve is placed. Also, incorporated in the concrete pad of the well is an 8-inch O.D. discharge line culminating in a valve. A 1/2-inch NPT brass stopcock is situated in the middle of a blind flange on top of the casing. The stopcock is situated on top of a stack of reducing bushings having across-the-flats measurements of 2 1/2, 2, 1 1/2, 1 1/4, 1, and 7/8 inches. Pressure measured at the stopcock was less than 1psig. Concrete pad had name of Walker marked in it.

Ross: 4S-8E-36cda; about 3402 elevation. Well was discharging to an elevated cooling device of perforated 8-inch pipe; no estimate of flow, but probably less than 100 gpm. A 2-inch line from the well to a nearby house may have been discharging an additional small quantity of water, since it is reportedly used for space heating and hot water use in the house, but the valve is very stiff, maybe inoperative. The well is also equipped with a hose bib on the north side of the well and a brass stopcock with pressure gage mounted in the middle of a steel plate welded to the top of the casing.

Pressure at the stopcock measured 21.8 psig at 1150 3/23/93. Temperature measured at the hose bib was 68.5°C. (155°F.). Concrete pad has Lukehart name marked in it. Would be a good observation well for well tests since it has good means of shutting in and ports for monitoring pressure.

Bill Walker: Lives in a house located in 4S 9E 18bda. Was one of the litigants in the original lawsuit leading to the decree which controls the amount and operation of the Lee-Walker-Hall wells (which now are all under the ownership of Bill McGrew). Bill Walker clarified that our location of the Blackwell well was wrong; rather than being in his location, he showed a location in 4S-9E-05dbd or 05dcb. Also, he offered the use of information in his head and files relating to data collected, or any other aspect of the thermal water system in the area.

Ron Hiddleston: visited briefly with Ron to find out if he happened to have a suitable flange for John McGrew to construct a decent discharge pipe. As it turned out, he didn't, but recommended Paramount Supply in Boise, 345-5432, for parts.

RE: TRANSFER APPLICATION FOR THE "LEE AND WALKER" WELLS

Dear Jack and Betty:

Department staff have had a chance to make a preliminary determination regarding the acres that will be involved in the transfer for the second and third priority water rights from the "Lee and Walker" wells. The information compiled to date suggests two things concerning all three priority rights from the wells.

First, the issue of forfeiture could become somewhat complicated for a portion of your property. I refer to the southeast end of the place of use for the first and third priority rights in which it appears that some preparation is underway to cultivate this land, possibly via irrigation. It appears that this land has never been irrigated or at least has not been irrigated for more than five consecutive years.

The department is obligated to determine if forfeiture of a right or a portion of a right has occurred through lack of use whenever a transfer application is filed to change the place of use. Under the agreement signed by you and the McGrews, the second and third priority rights will be split and will include changes in places of use. "Lack of use" is defined as five or more consecutive years in which water is not applied to a beneficial use. This same review must occur to some degree in the Snake River Basin Adjudication (SRBA) even if a transfer application is not filed. Elmore County is currently undergoing SRBA review to determine the validity of water rights claimed in the adjudication process.

While particular water rights and/or SRBA claims may include the area in the southeast portion of your land, there is some doubt regarding the validity of rights to irrigate that portion. I wanted to alert you to this possibility to avoid unpleasant surprises later in the transfer and/or SRBA process.

Second, as staff work continues, it has become apparent that it would not be appropriate for department personnel to prepare the transfer application due to the level of regulatory review that must be applied to such an application. This office will have to withdraw its offer to prepare the application for you but will continue to provide any technical data and other information such as map copies and so forth to assist you in filing the transfer.

I regret that this situation has become somewhat complicated and hope this new perspective does not unduly inconvenience you. I believe that your interests and the McGrews' interests will be better served by having someone other than

Jack and Betty Powers
February 15, 1996
Page 2

department staff prepare the application. You might want to wait until the final field verification for the rights has been completed and summarized by this office before turning to the actual application preparation. When the department completes its summary of the situation, the information will be available to you and should be helpful in going through the transfer process.

Please let me know if you need more information. Meanwhile, this office will continue its field verification process and will contact you when a summary is completed for the water rights and/or SRBA claims in question.

Sincerely,

A handwritten signature in cursive script, appearing to read "Steve Lester".

RE: TRANSFER APPLICATION FOR RIGHT NOS. 61-00301 AND 61-00302

Dear Jack and Betty:

The staff at this office met today to discuss the best procedure to use in filing the transfer application that is referred to in the agreement signed by you and the McGrews regarding the above-referenced second and third priority rights from the "Lee and Walker" wells.

Our recommendation is that the transfer filing should be delayed until field verification of water uses is completed for both owners' property. The transfer will be part of the overall water right picture for both ownerships and therefore cannot be looked at in isolation from the entire irrigation picture under both ownerships. This office already has a considerable amount of data, maps, aerial photographs and so forth but still needs to complete the field inspections. Once the field verification is conducted, department staff can prepare recommendations for each ownership and can prepare the proper transfer application for your consideration.

We think this approach would be the most efficient and the least costly for you. It is extremely doubtful that the transfer process could be completed prior to the upcoming irrigation season. While the department cannot sanction any uses of water not covered by recorded water rights and/or adjudication claims, it is difficult to foresee any problems that might occur if both owners had some temporary arrangement for the upcoming irrigation season regarding uses of the "Lee and Walker" wells provided that such an arrangement does not injure any other parties.

This office will conduct the field work at the earliest opportunity this spring. The transfer application will then be prepared and sent to you. Meanwhile, please do not hesitate to contact me if you need any help.

Sincerely,

Steve Lester
Water Rights Supervisor

Re: October 24, 1996 meeting

Dear Jack & Betty:

We appreciate the opportunity to meet with you, Sean and Terry Scanlan on October 24th. We were able to discuss and clarify some important water right and SRBA issues relating to your Bennett Creek Ranch. This letter summarizes the content of our meeting.

The first item we discussed is whether the decree for the large hot water well will allow for expanded acres in excess of the historically irrigated acres. The historical usage is the basis of the decreed water rights and any additional acres require a new water right. The role of the Snake River Basin Adjudication is to determine the historical use and clarify any ambiguities in the decree. We think the data we obtained concerning the prior 25 years operation of the ranch is good information but, we welcome any additional documentation you can provide us concerning this issue.

Sean inquired if McGrews have filed a transfer to move the water right from the Walker well to the Two plus well. They have not. We anticipate using the transfer application you intend to file to exchange the 125 inches of 2nd and 3rd priorities as the process to replace the Two plus well for the Walker well. Because the Two plus replaced the Walker well prior to 1987 we can recognize it under Idaho law as an "accomplished transfer." The filing of this transfer application is important because it will also establish the historical place of use for your large geothermal well and the Two plus well.

The next major issue we discussed is the need to establish legal water rights for the 183 acres South of the large well and some options available to do this. One option is to apply for a new water right using the large well. For this application to be successful, you will need to comply with Idaho Code section 42-233(1). Enclosed for your information is a copy of I.C. 42-233.

A second option is to transfer water from other parcels of land to the 183 acres. As we discussed, this procedure does not allow for the "unstacking" of rights. It requires an equal amount of land be dried up by transferring all appurtenant water and water rights from the "transferred from" land to the 183 acres.

We briefly discussed the option of obtaining a permit to develop a groundwater source from a cold water well for the 183 acres. You indicated this did not appear to be a feasible alternative because a number of "dry holes" have already been drilled in the area by other parties.

October 28, 1996

Page 2

Please keep in mind that you can also use a combination of the options described above to provide water for the subject 183 acres or any part of the 183 acres you want to cover.

The timing of the applications you intend to file is critical. The department must comply with certain statutory requirements in advertising, processing and resolving protests that could delay approvals beyond the start of the next irrigation season. In the future if land is irrigated that does not have a valid water right we would be required to issue a "cease and desist" order and follow up with penalties for non-compliance with the order.

Another matter we discussed is the change of ownership filing for the portion of the ranch you sold. Please complete and return the forms we provided. Include a copy of the deed that conveys the property to the new owners. You indicated you still want us to prepare our recommendations using the permissible place of use concept. Therefore, when we split the water right claims for the parcel you sold, that land will receive a prorated share of each and every right that is deliverable to that land.

We still need evidence to support the January 1, 1872 priority date claimed by the McGrews in the claims for the Hot Springs Creek ranch. As I indicated in my October 21, 1996 letter, until we receive sufficient documentation to confirm that date or another date, our only alternative is to recommend the claims be disallowed.

The last thing we discussed was our intention to perform in March 1997 a live flow simultaneous measurement of the Two plus well and your large geothermal well. We will schedule a time and discuss the details at a later date.

If we can provide you with copies of our file information or application forms to assist in your filings, please let us know.

Sincerely,

Mel Schulte

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF ELMORE

ADIN HALL and RUBY HALL,
husband and wife,

Plaintiffs,

-vs-

WILLIAM H. WALKER and
MARGARET WALKER, husband
and wife;

GILBERT C. WALKER and
LENA WALKER, husband and
wife;

WORTH E. WALKER and
PAULINE WALKER, husband
and wife;

GILBERT WALKER AND SONS, a
co-partnership, consisting of
GILBERT C. WALKER, LENA M.
WALKER, WORTH E. WALKER and
WILLIAM H. WALKER;

HAZEL ROWENA LEE, as executrix
of the estate of WORTH S. LEE,
also known as WORTH SCOTT LEE
and also known as WORTH S.
LEE, JR.;

HAZEL ROWENA LEE;

Defendants.

Civil No. 2248

D E C R E E

The plaintiffs herein being represented by Anderson, Kaufman,
Anderson & Ringert; the defendants William H. Walker and Margaret
Walker, Gilbert C. Walker and Lena Walker, Worth E. Walker and

PARRY, ROBERTSON & DALY
RECEIVED

NOV 3 1967
A.M.
7:41 P.M.

Pauline Walker and Gilbert Walker and Sons, a partnership, being represented by Parry, Robertson & Daly, and the defendants Hazel Rowena Lee, individually and as executrix of the estate of Worth S. Lee, deceased, being represented herein by Hall & Rowett, and the said parties having executed and filed with the Court a written stipulation for the entry of a decree settling and adjusting the respective rights of the parties, NOW, THEREFORE;

Pursuant to the stipulation of the parties, IT IS HEREBY FOUND BY THE COURT AS FOLLOWS:

1. The defendants William H. Walker and Margaret Walker, husband and wife; Gilbert C. Walker and Lena Walker, husband and wife; Worth E. Walker and Pauline Walker, husband and wife; and Gilbert Walker and Sons, a co-partnership consisting of Gilbert C. Walker, Lena M. Walker, Worth E. Walker and William H. Walker, are hereinafter referred to collectively as the defendants Walker. Hazel Rowena Lee, as executrix of the estate of Worth S. Lee, also known as Worth Scott Lee and also known as Worth S. Lee, Jr., and Hazel Rowena Lee, individually, are hereinafter referred to collectively as defendants Lee.

2. The plaintiffs Adin Hall and Ruby Hall, husband and wife, have released, relinquished, transferred and conveyed to the defendants Lee all of their right, title, claim and interest in and to the waters of the Hot Springs, sometimes known as the Lee Hot Springs, located near the corner common to Sections Sixteen, Seventeen, Twenty and Twenty-one, Township Three South, Range Eight East, Boise Meridian, in Elmore County, Idaho, which waters flow into a creek known as Warm Springs Creek, and the said plaintiffs have transferred and conveyed to the defendants

Lee all of their right, title, claim and interest in and to all waters produced by the said Lee Hot Springs and to all waters from said springs flowing in Warm Springs Creek after being so produced, and that by virtue of such transfer and conveyance, the defendants Lee are now the owners of all of the rights of the plaintiffs in and to the waters produced at said Hot Springs and flowing therefrom into Warm Springs Creek.

3. The defendants Walker are the owners of an artesian well located in the Northwest Quarter of the Northeast Quarter of Section Eight, Township Four South, Range Nine East, Boise Meridian, in Elmore County, Idaho, drilled pursuant to Permit No. G25745 issued by the Department of Reclamation of the State of Idaho, which permit has a priority date of June 10, 1955, and which said well is hereinafter referred as the Walker well. p. 9

4. The defendants Lee are the owners of an artesian well located in the Northwest Quarter of the Southeast Quarter of Section One, Township Four South, Range Eight East, Boise Meridian, Elmore County, Idaho, which well was drilled pursuant to Permit No. G29317 issued by the Department of Reclamation of the State of Idaho, which permit has a priority date of January 19, 1961, and which said well is hereinafter referred to as the Lee well.

5. Waters flowing from the Lee Hot Springs and from the Walker well and the Lee well, both of which are artesian wells, all come from a common source of water in the same aquifer or the same subterranean body of water and the flow of water from both artesian wells tends to decrease, interfere with and eliminate the flow of the Lee Hot Springs.

6. Each tract of land herein described is arid in character and requires the artificial application of water to render such tract valuable for agricultural purposes and the amount of water awarded to each party under the provisions hereof is necessary for the successful irrigation and cultivation of the land to which the water is made appurtenant.

IT IS THEREFORE HEREBY ORDERED, ADJUDGED AND DECREED AS FOLLOWS:

61 0380 1. During the irrigation season of each year, which season is hereby established as beginning April 1 and ending on November 1, the defendants Lee shall have the right to use 125 miner's inches of continuous flow of water from the Lee artesian well, with a priority date of May 1, 1889, which amount of water represents and is in lieu of the flow of the Lee Hot Springs, and withdrawal of said water from the Lee well will constitute a change of the point of diversion and a change of the place of use of the entire flow of the Lee Hot Springs and of the waters flowing therefrom into Warm Springs Creek and shall be for use upon and shall be appurtenant to the following described land located in Elmore County, Idaho, to-wit:

The West Half of the Southeast Quarter and the Southeast Quarter of the Southwest Quarter of Section One; the North Half, the Southwest Quarter and the West Half of the Southeast Quarter of Section Twelve; the Southeast Quarter of the Southeast Quarter of Section Eleven; the West Half of the Northeast Quarter, the North Half of the Northwest Quarter, the Southeast Quarter of the Northwest Quarter, the Northeast Quarter of the Southwest Quarter and the Northwest Quarter of the Southeast Quarter of Section Thirteen; and the Northeast Quarter of the Northeast Quarter of Section Fourteen, all in Township Four South, Range Eight East, Boise Meridian.

61 0301 2. During said irrigation season, the defendants Walker shall have the right to the use of 320 miner's inches of continuous flow of water from the Walker artesian well with a priority date of June 10, 1955, for use upon the following described lands located in Elmore County, Idaho, to-wit:

The Southwest Quarter, the West Half of the East Half, and the Southeast Quarter of the Southeast Quarter of Section Eight; the Southwest Quarter of the Southwest Quarter of Section Nine; the North Half of the North Half of Section Seventeen; the East Half of the Northeast Quarter, the North Half of the Southeast Quarter and the Southwest Quarter of the Southeast Quarter of Section Twenty-nine; the South Half of the Southwest Quarter and the Southwest Quarter of the Southeast Quarter of Section Ten; the West Half of the Northwest Quarter of Section Fifteen; the East Half of the Northeast Quarter and the Northwest Quarter of the Southeast Quarter of Section Sixteen, all in Township Four South, Range Nine East, Boise Meridian.

*P. O. Walker
Montpelier*

61 0302 3. During said irrigation season, the defendants Lee, in addition to the rights provided for in paragraph 1 above, shall be entitled to and shall have the right to the use of 1000 miner's inches of continuous flow of water from the Lee well with a priority date of January 19, 1961, for use upon and which water shall be appurtenant to the real property of the defendants Lee described in paragraph 1 above.

4. Neither the defendants Lee nor the defendants Walker shall have the right, without the consent of the other, to pump water from their respective wells.

5. For a period of three years from and after October 18, 1967, the defendants Lee shall not withdraw more than 200 miner's inches of continuous flow of water at any time from the Lee artesian well unless it is sooner determined to the satisfaction

of the defendants Lee and Walker that the water supply is ample for a larger withdrawal.

6. The right of the defendants Lee to withdraw 125 miner's inches of continuous flow under paragraph 1. above is hereby established as the first right in order of priority; that the right of the defendants Walker to withdraw 320 miner's inches of continuous flow is hereby established as the second right in order of priority and the right of the defendants Lee under paragraph 3 above to withdraw 1000 miner's inches of continuous flow is hereby established as the third right in order of priority; that if the Lee well does not produce an artesian flow of 125 miner's inches of continuous flow throughout each entire irrigation season, the defendants Walker shall reduce the flow of water from the Walker well in an amount sufficient to insure the continued artesian flow of 125 miner's inches of water from the Lee well throughout each entire irrigation season; that if the Walker well, subject to the foregoing limitation, does not produce an artesian flow of 320 miner's inches of water throughout each entire irrigation season, the defendants Lee will reduce the flow of water from the Lee well under the rights set forth in paragraph 3 above in an amount sufficient to insure the continued artesian flow of 320 miner's inches of water from the Walker well throughout each entire irrigation season, but in no event shall the defendants Lee be required to reduce the flow of their well below the 125 miner's inches recognized as a first right, as set forth in paragraph 1 above.

7. Before the start of the irrigation season for the year 1968, the defendants Lee and the defendants Walker shall each construct at their respective wells a permanent-type concrete

or metal weir adequate for accurate measurement of the water produced by their well; that both wells shall be maintained and equipped at the owner's expense with the necessary valves and equipment to control the flow of water from the wells and for capping and closing off completely the flow of water from said wells when the same are not in use; that both of said wells shall be kept closed at all times except during said irrigation season; provided, however, that during the nonirrigation season each of said parties shall be entitled to withdraw from their respective wells for domestic purposes, including water for livestock, an amount not to exceed one miner's inch of water.

8. At the written request of either the defendants Lee or the defendants Walker, transmitted to the other, the operation of both artesian wells shall be placed in charge of the water master of Bennett Creek, providing such water master be willing to take charge of and supervise the operation of the wells pursuant to this decree. If such water master be not so willing, then another person shall be selected by said parties to serve as water master, to take charge of the operation of the two wells in accordance with this decree; that if the parties are unable to agree upon such a water master, then he shall be selected by three arbitrators, one chosen by the defendants Lee, one by the defendants Walker and a third by the two thus chosen. The decision of any two of the three arbitrators shall determine who shall serve as water master. The expenses and compensation of such board of arbitrators and of the water master for services in connection with the operation of the wells and the cost of providing a pressure gauge shall be borne equally by the

defendants Lee and the defendants Walker.

9. The rights and duties of the defendants Lee and the defendants Walker shall inure to the benefit of and be binding upon the heirs, administrators, executors, successors and assigns of the said parties insofar as the same are related to the ownership of the land and the operation of the artesian wells above described, and each of said parties is hereby ordered to comply with the provisions of this decree.

10. All of the parties hereto, their agents, employees, attorneys, privies and successors in interest are, and each of them is hereby, enjoined and restrained from any and all interference with the enjoyment of the rights to the use of said subterranean waters, as set forth in this decree and the rights and priorities, as herein determined and awarded, be and each of them is hereby quieted and confirmed as against each and every party to this action.

11. All pleadings filed herein be and the same are hereby amended to conform to the terms of this decree and each party shall pay his own costs herein.

Dated this 6 day of November 1967.

MEMORANDUM

To: Lori Graves

From: Paul Castelin *PMC*

Date: May 27, 1993

Subject: Two-Plus Aquifer Test Results

This is a summary of events that took place during the instrumentation and conduct of the aquifer testing using the Two-Plus well as the production well and the Walker and Ross wells as observation wells. There are also some comparisons to results from previous aquifer tests. Personnel involved included Lori Graves, Ken Neely, Lin Campbell, and Paul Castelin.

Hydrogeology of the Aquifer System:

Well logs of wells completed in this thermal aquifer show that it is predominantly a fracture-dominated silicic-volcanic rock confined system, probably very similar to faulted, silicic volcanic aquifer systems that have been developed by wells in Owyhee County and to a lesser extent at Boise. Most of the wells completed in the system are sub-parallel to the Mount Bennett Hills a couple of miles to the north and trending about northwesterly (Figure 1). It is very likely that all wells are completed in or near faults known to exist along the north margin of this part of the Western Snake River Plain, implying that aquifer characteristics will be strongly influenced by the preferred orientation of faults/fracture sets. No suitable observation wells were found lateral to the trend of the fault system to test this hypothesis, however.

Instrumentation:

The Two-Plus and Ross wells were equipped with liquid-filled 30-lb. pressure gauges teed also to a Unidata data logger querying a Unidata 0-145-lb pressure transmitter. Each well location was logged using a Trimble Basic global-positioning system unit.

Results and Uses for Constant-Rate and Recovery Data:

Observation well data from the Walker well during the constant-rate flowing of the Two-Plus well at about 1,800 gpm indicates a highly-transmissive system. Using both the Theis and Cooper-Jacob analytical methods for the drawdown phase of the test, the transmissivity (T) of the aquifer was estimated to be about 325,000 gpd/ft, with a storativity of about 0.00006. These values indicate that the drawdown for a given period of time is relatively low, but very widespread, and indicate a confined aquifer of very limited compressibility. Since this test was run for only 300 minutes, the value of T represents a relatively small part of the aquifer around the Two-Plus well. Recovery data from the test was slightly more difficult to interpret, but did provide similar results: a transmissivity of about 378,000 gpd/ft.

Tests run by IDWR in 1978, however, obtained values for transmissivity of about 39,000 gpd/ft, about one order of magnitude smaller than our results. This occurred because the 1978 test, run for three days, did identify a negative boundary that reduced the effective transmissivity. Keith Anderson, a private consultant, performed a four-day test in 1964, flowed the Lee well about 1,125 gpm (2.5 cfs), and monitored the pressure changes at both the Lee and Walker wells. His test data show yet another negative boundary encountered after about a day and a half (2,100 minutes). The drawdown versus time plot for his data after 2,100 minutes indicates an effective transmissivity of about 29,600 gpd/ft. Because of the length of his test and the appearance of aquifer boundaries late in the test, Anderson's data is best for making longer-term predictions of the season-long effects of flow. These are discussed below.

Comments about Licensing of Two-Plus Well:

I'm no authority on the licensing process, but I can give you some ideas to consider. First, the Two-Plus, Walker, and Lee wells are all completed in the same aquifer system (the Ross well is not) and therefore mutually interfere when flowing. Not all the wells are at the same elevation, so as in this case, when the aquifer is confined and the wells free-flow, the well highest in elevation will cease flowing first, the next lowest second, and so on as the irrigation season (and withdrawals from the system) progresses. Figure 2 shows the concept; the dashed lines indicate the progressive decline of the water table as the irrigation season progresses.

The Two-Plus well was capable of producing 1,800 gpm for the 300-minute duration of the constant-rate drawdown test with a 9-inch orifice on the end of the 10.25-inch I.D. discharge pipe. Only about 6.7 feet of drawdown was still available at the end of the 300-minute period. Using Anderson's value for T of 29,600 gpd/ft, a rate of 1,800 gpm could be sustained throughout a 210 day irrigation season if an initial

Even though the pressure transmitters had much too large a range (and therefore poor resolution and accuracy at the low range) we decided to see what results we would get. The Walker well was instrumented with an In-Situ Hermit 2000 datalogger with a 10 psia transducer set at about 5.42 feet below the top plate of the casing flange.

Conduct of Testing:

Wells were instrumented on Friday, April 2, with a multiple-step flow test to be run Monday, April 5. Following the multiple-step test, the wells would be allowed to recover overnight. On April 6, a constant-rate test was initially anticipated to be run for 48 hours, followed by measurements of recovery until about 90% of the recovery was complete. Antecedent trend of water levels in the aquifer system were monitored from April 2-5.

Results and Uses for the Multiple-Step Data:

Multiple-step flow tests were run April 5, at rates of 300, 600, 1200, and 1800 gallons per minute (gpm). A fifth step of 2400 gpm was attempted but even with the gate valve full open, it was impossible to obtain 2400 gpm. Maximum flow rate was estimated to be about 2000 gpm (4.5 cfs). Full recovery of pressures was allowed at the end of each step before the next step was started. Recovery was extremely rapid following each step, usually being complete within very few minutes. Each step was run for 25 minutes. Results are as follows:

<u>Step</u>	<u>Rate (gpm)</u>	<u>Drawdown (ft)</u>
1	300	1.4
2	600	3.7
3	1,200	10.3
4	1,800	23.0

Plotting the results on log-log paper, Discharge vs. Drawdown, (Figure 2) it was apparent that drawdown was not proportional to discharge at the 1,800 gpm rate, indicating some well loss due to turbulent flow in the fractures supplying the well, not an unusual or unexpected result. High well loss reduces the amount of available drawdown, and should be avoided when aquifer system pressures are low. To maximize the amount of flow for the drawdown, long-term operation of this well should probably not exceed about 1,200 gpm. For short-term periods of flow, this is not as important, as recovery of water levels occurs between periods of flow.

wellhead pressure of about 40 psig existed at the beginning of the season. This April, near the high-pressure peak for the year, the wellhead pressure was only 13 psig. From the step-testing we know that zero drawdown is reached within minutes with the valve full open and certainly well short of 2,400 gpm. Therefore, with a starting wellhead pressure of about 13 psig, the flow rate from Two-Plus alone that could be sustained for the entire irrigation season is only about 200 gpm.

It should be remembered, however, that when the Two-Plus well was tested no other wells were flowing, therefore they were not interfering with the Two-Plus well. In actual operation, with other wells such as the Walker and Lee flowing, the Two-Plus may produce significantly less than 2,000 gpm, even over the short term, and less than 200 gpm over the irrigation season.

It's a tough one to know how to license the Two-Plus individually. With no ability to pump the well, once the pressure in the system declines, they're done. Once the pressure head declines below the Walker well discharge, that leaves only Two-Plus and Lee wells capable of flowing. As heads continue to decline, Two-Plus will cease flowing first, then the Lee well. As long as all wells are owned by one owner, we should license for total amount required for irrigation, stock, and whatever uses are itemized on the permit. If the pressure in the aquifer is high enough, the water will be available, if not, it won't. If the property is subdivided, it becomes a whole new ball game, and we'll need to deal with that as it comes. A condition or conditions may need to be put on the license saying something to the effect that upon subdivision the specific water rights will need to be re-negotiated.
