STATE OF IDAHO

DEPARTMENT OF RECLAMATION

BOISE, IDAHO

REPORT OF ENGINEER

Permit No. 25631

This proof is for Completion of Works & Beneficial Use In Water District No. _____

1. Name of applicant: Lee T. Trail & Mary A. Blair

2. Source of water supply: Little Canyon Creek

3. Location of point of diversion: Is in the _____ of Section 28

T. 1 S. R. 10 E., B. 1 N. County of Elmore

4. Describe works as they exist, giving dimensions and capacities of same:

Diversion Dam is 28' high x 20' wide on crest with a 792' length including width of both spillways and diversion canal. Upstream slope is 3:1; downstream slope is 2:1. The concrete spillway on the west end is 39' wide and 7' deep, top being level with the crest of the dam. There are 4 9'x7' sections with provision for flash boards. See picture No. 1.

The west or south abutment of the spillway has a 12'x7' opening with flash board provision into a diversion canal which is 27' top width x 18' bottom width x 6' x 7' deep, and has a capacity of 50 c.f.s. or more.

5. Water is used for:

The east spillway is 68' wide on top x 40' wide on bottom, 3' deep x 500' long with 4" to 5" slope. Bottom is on solid lava rock with a dozed-up embankment all along the east side and 200' on the west side. Water returns to the creek approximately 450' downstream.

7. Both abutments are into a lava rock ledge on each side of the creek of channel.

There is an estimated 35" seepage from the east abutment coming from a fractured formation. There is a 12" concrete tile set into the 1st source of the seepage area, and extending through the toe.

The outlet conduit is 24" CMP encased in concrete, with control gate stem supported on upstream face of dam. Gate control wheel was missing.

A weir of sorts is in place in the diversion canal 350' downstream from the dam. There is no contraction on bottom or north side of weir. With a .6' pile up depth on measuring gage there is a .05' submergence on weir. See picture No. 3. *More photos*

There are also weirs in the main stream to measure natural flow into and out of the reservoir. One weir is $\frac{1}{2}$ mile upstream from the reservoir, and the other weir is 400 feet downstream from the dam. See picture No. 2. There is no bottom contraction.

8. Remarks: Both Mr. Trail and Mr. Blair along.

(Mr. Henry was notified, as requested, as to when examination would be made. She and my car appeared at the site. As this water is diverted at time of navigation and during times when all rights are filled and is regulated by the watermaster, I believe the protest should be dismissed.)

No water being diverted at time of examination.

This examination was made on the 4th day of November, 1963
