Instream Stock water

T035	R06E	S10	NESENW	B.
		S9	SWSWNW	E.

The "headgate" in Canyon Creek has been removed and the beginning of the ditch filled with dirt and rocks. This right has been supplemented to Mr. Home Irrigation District and used for instream stockwater when the water will reach this section of Canyon Creek. However if claimant were to revert to flood irrigation, this right could be beneficially used.

Pivots supplied by Mt. Home Irrigation Dist. Current use is primarily instream stock water when Canyon Creek is flowing. Flow in Canyon Creek dependent on excess water from Mt. Home Irrigation District

The lateral from Mt. Home Irrigation District's canal used to convey water to the place of use passes through extremely gravelly area. Much of this ditch has been buried and it no longer possible to co-mingle Canyon Creek water with Mt. Home Irrigation District water. The control gate at the head gate has been removed and the head of the ditch was filled in to prevent water from Canyon Creek from entering the ditch. However, the ditch is still present and if the claimant reverted to flood irrigation it appears the use could be resumed.
