Re: Water Right Numbers 75-69A, 75-70A, 75-10061A, and 10062A

I have recently noted that the legal descriptions of the points of diversion stated in the Adjudication Recommended Right Report differs in some cases from that stated in the Adjudication Claim Reports. The descriptions stated in the Claim Reports are correct, and agree with the descriptions on the claim forms I submitted.

In the case of right 75-69A the use of NW NW Lot4 significantly changes the location of the diversion from SE NW NW. The NW NW of Section 2 is indeed Govt Lot 4, but I believe the correct way to state the location using the Lot 4 identification would be SE NW Lot4.

For rights 75-10061A and 75-10062A changing SE NW NW to NW NW remains correct although the point of diversion is located within a 40 rather than a 10 acre part. For the sake of consistency I suggest you either carry the descriptions to the 10 acre part (quarter-quarter-quarter section) or to the 40 acre part (quarter-quarter section.)

The two points of diversion for right 75-70A are described consistent with my claim in both the Recommended Right Report and the Claim Report.

In case I've thoroughly confused things, the four rights each have two points of diversion in Section 2: SE NW NW and SW SW NW. Or, if you prefer: NW NW and SW NW.

Thanks for your assistance.

Sincerely,

John Burns
