Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: a control group and an experimental group. The control group received a standard training program, while the experimental group received a training program with a focus on the specific skills required for the task. The results of the training program were compared between the two groups.

[illegible]

The figure shows a schematic representation of the proposed mechanism for the formation of the polymeric species. It includes several chemical structures and reaction steps:

- Top left:** A cyclic structure representing a polymer chain segment.
- Below it:** A linear structure showing a repeating unit with a central carbon atom bonded to two oxygen atoms, which are further bonded to other groups.
- Middle left:** A structure labeled "Polymerization" showing a chain of repeating units.
- Middle right:** A structure labeled "Polymerization" showing a different arrangement of repeating units.
- Bottom left:** A structure labeled "Polymerization" showing a chain of repeating units with a different connectivity.
- Bottom right:** A structure labeled "Polymerization" showing a chain of repeating units with a different connectivity.
