MEMORANDUM

September 21, 1995

RE: SRBA exams

In May of 1991, a field exam was attempted for 67-07713. At that time the earth dam in Jenkins Creek had been washed out. On September 19, 1995, I attempted a second field exam and measurement, only to find that the dam was still not in place. The permit holder had mistakenly thought I was to look at the system under 67-02110. The diversion established under 67-07713 has apparently not been used since 1991. Before 1991, it is not clear when the system was last used, although the permit was issued in 1987 (see correspondence of 11/27/91).

67-02095 and 67-02110 are 1914 and 1916 rights originally licensed within NW S24, and which overlap the place of use in SWNW S24 under permit 67-07713. However, claim A67-02110 shows the point of diversion and place of use in Section 13, and states that use has occurred there for the past 25 years. This is the diversion that I was shown on 9/19. There was no claim filed for 67-2095; perhaps A67-02110 represents a combined claim.

Because of the overlap in recorded rights and the potential for accomplished transfer, I did not attempt to finalize 67-07713. Forfeiture could be an issue at the recorded P/U, however, the right may simply be diverted at the S13 diversion, or may legitimately be in use elsewhere on the Saito farm. There are several hundred acres irrigated and at least three sources of water which I suspect are co-mingled for distribution. And, there are only 78 acres under right 67-02110.

The best approach is to wait for SRBA verification, when the Saito's entire Jenkins Creek system may be analyzed and evidence of use at the new location can be solicited. If legitimate use may be found under 67-07713 at that time, any modifications may likely be made via license amendments. If not, then 67-07713 may be relinquished by permit holder or canceled by IDWR.
