POD LEGAL DESCRIPTION: NWNENW (L-1) Sec. 5, T8S R46E. This legal description will require an amendment to the claim.

GALAND

½ inch galvanize pipe connected to Wy G & F 12-inch pipe to provide domestic water to Roger Galland's caretakers house. The agreement to install the domestic pipe was signed in 1979. After the May 20, 1971 mandatory permit statute, which will require an application for permit to cover the use. The home is located in the NWNWNE of Sec 5, T8S R46E. The pipe connects to the Wy G & F in the SWSWSE of Sec. 32, T7S, R46E.

Does the special use permit allow for the domestic hook up

Does that make the domestic part of Wyo & Fish's' right or would they have to file a separate claim to the Spring.

Darren Olson, USFS, is going to check on this for me to see if it's authorized as well as 24-10456 (partial decree) falls into.

MEMORANDUM

TO: Tom Annear

FROM: Ed Berry

COPY TO: file

SUBJECT: Auburn water rights documents

Enclosed are copies of pages from the Auburn work diary of 1960. The people identified in the diary were Earle, Don and Jerry. I am sure it is Earle Wilde, but I am not certain of the other two individuals. I assume that we can determine the identity of Don and Jerry from old personnel records. I have also included a copy of pages from December 8 to December 12, 1962. The personnel are Earle Wilde, Butch Bonner and Don. I think that this is Don Peterson.

The first pages chronicle the duties of the day of October 1, 1960. Note that the entry shows three trips to the spring. Hatchery personnel would check the spring pond whenever they opened a supply valve. They were checking to make sure that the spring pond level was not decreasing. They were using as much of the spring flow as they could without drawing down the collection pond. The records from December of 1962 illustrates how often they had to check the spring to make sure they were getting all of the water possible without risking damage to the pipe-line. As you can see hatchery personnel checked the spring four of the five days in these entries.

The reference to the spring "holding its own" is important because it documents a practice that was explained in the inter-department communication of Butch Bonner's that I previously sent. In the second paragraph of his memo, Butch writes, "Since the time the spring was diverted to the hatchery system we have used all of the water from the spring. We allow a minimum of 30 gpm to overflow at the collection dam to prevent air from entering the main pipe-line."

The reason that they allowed 30 gpm of overflow was so that the spring pond would not drain down and create a vacuum in the collection pipe. It is believed that if this were to occur, the pipe could collapse. That practice continues to this day. We use all but 30 gallons per minute of the total spring flow for hatchery operations.

Yes, I've finished 24-03035. It was a license for just over 2 cfs, maybe it and 24-4044 together add up to about what I measured.

I don't have my files here and I can't remember the name of the person I talked to, "Tom Annear" doesn't sound familiar. This fellow said they had found evidence back to 1978. However, the current diversion structure matches the description in the field exam, and there is a photo of the hatchery building on the public-information sign dated 1948, that looks just like it does now.

The existence of claim 24-10000 out of Webster Creek explains why there seemed to be more structures on the creek than accounted for by the neighboring claim (I can't remember the number) based on an old irrigation license for a ranch.

At 02:38 PM 9/22/2005, you wrote:

hi Bryce,

Tom Annear called me about 24-2035. He said you were out there and measured the flow at 3.89cfs and wanted to know how to claim the additional flow.

They have two other claims in the adjudication 24-4044 from the same source and 24-10000 out of Webster Creek. 24-10000 is a b.u. claim. I don't know why they were not sent to you with the license. Neither claim has evidence to support the priority dates. Have you completed 24-2035?

Schematic

- 1) Parshall flume throat 1.5', upper head 0.78 ft on staff gage (see photo).

From BOR water-measurement manual

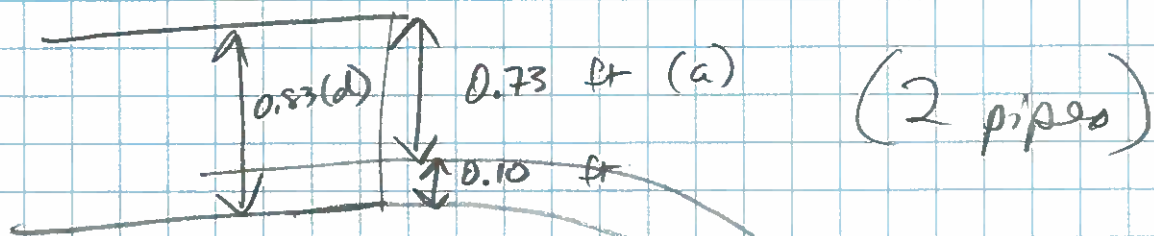

$$Q = 4W H_a^{1.522W 0.026}$$

$$= (4)(1.5)(0.78)^{(1.522 \times 1.5 - 0.026)}$$

$$= (4)(1.5)(0.78)^{1.53813}$$

$$= 4.09 \text{ ft}^3/\text{s}$$

- 2) Discharge from 2 overflow pipes (10" diameter) using California Trajectory method (BOR water measurement manual)

$$Q = 8.69 \left(1 - \frac{a}{d}\right)^{1.88} d^{2.48}$$

$$Q = 8.69 \left(1 - \frac{0.73}{0.83}\right)^{1.88} (0.83)^{2.48} = 0.10 \text{ ft}^3/\text{s}$$

$$\text{Total } Q = 4.09 \text{ ft}^3/\text{s} - 2(0.10) \text{ ft}^3/\text{s} = \underline{3.89 \text{ ft}^3/\text{s}}$$

3) Sense check: per license exam, pipe to hatchery is 10". $Q = AV \rightarrow V = \frac{Q}{A} = \frac{3.89 \text{ ft}^3/\text{s}}{(5/12)^2(\pi)} \approx 7.13 \text{ ft/s}$

This is reasonable for enclosed pipelines.

Because the diversion works match the description in the licensing exam I believe this represents the original capacity. The original license exam appears to have been done before the hatchery was in full operation, which probably explains why the license is issued for less than Full Q. I have talked to Mark Souden at Wyoming Game and Fish. An additional Ben. use claim may be filed.
