E
IMPROVEMENT - St. Joe
Winter Sports
North & South Ski Course Shelter

Forest Supervisor,
St. Maries, Idaho.

Dear Mr. Fitting:

Reference is made to my letter of October 17.

Attached are two sets of blueprints and log lists for the ski course shelter to be erected on the St. Joe Forest. The plans are not fully completed but are being sent in order not to hold up the project. The completed plans will be sent you by November 1.

Your attention is called to the size of footings on the front wall of the structure (8" x 2'-4"), see sheet 1, Section DD. We have no information as to the type of ground on which this structure will be erected. It would be well to check and if a good solid footing bed is not available the footing under the front wall should be increased to 12" x 2'-8".

Very sincerely yours,

F. E. THIEME,
Assistant Regional Forester,
Division of Engineering.
