

11/16

The place of use for 2-38 should only include that area associated with the C.J. Strike Village. All other irrigated areas appear to be covered by other water rights. The original claim for 2-38 stated a priority of 04/01/1952. The C. J. Strike dam was completed in 1952 and a dedication of the project was held on June 8, 1952. Figure 4 is an photo of the dam and village prior to the completion of the dam. The photo can be dated to sometime prior to 1952 as the dam and generation facilities are not yet completed. The area around the village is being irrigated as this time as evidences by the darker color of the photo. A closer inspection of the photo also reveals circles of slightly dark hue within the village. This appears to indicate irrigation occurring using an impact type sprinkler rotating to create an area of irrigation.

Figure 4: Aerial photograph of the C.J. Strike Dam and village. The darker hue of the area around the village indicates irrigation. Photo can be dated to 1952 or earlier.
