IN THE DISTRICT COURT OF THE 5th JUDICIAL DISTRICT OF THE
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA

Case No. 39576

Subcase Nos. **34-119C, 34-130,**
34-131A, 34-132A, 34-195A,
34-196A, 34-197A, 34-360A
34-479, 34-605A, 34-776

AFFIDAVIT OF LOY PEHRSON

STATE OF IDAHO)
County of Twin Falls) ss.

LOY PEHRSON, being first duly sworn on oath, deposes and states the
following:

1. I make the following statements based on my personal knowledge.
To the extent I state my personal beliefs, they are based on personal knowledge
and experience. I am otherwise competent to give the testimony set forth in this
affidavit.

2. All of the information herein is true and correct to the best of my knowledge, information and belief; where based on information and belief, I believe the same to be true and correct.

3. I am one of the claimants to the water rights involved in these subcases and have personally used the rights each year since 1978.

4. From about 1986 through 1991 I met with the Idaho Department of Water Resources numerous times regarding these water rights to ensure that they would be accurately described. From 1984 until the present, water under these rights has been used through ditches known as the Pehrson Ditch and the Lower Burnett.

5. In 2007, I received a letter from IDWR indicating that, in the partial decrees, the legal description of the points of diversion is inaccurate. A true and accurate copy of that letter dated October 22, 2007 is attached and incorporated into this affidavit as if set forth fully herein as Exhibit A.

6. The decrees identify the point of diversion is being in the NWNWNE of S24 T06N R25E. Actually both points are in the NENWNE, and have been since before 1987.

7. Attached as Exhibit B is a memorandum by Ernie Carlson, an IDWR employee dated January 18, 2008 and copies of aerial photographs, which describes the location of the various points of diversion. (What I refer to as the Lower Burnett ditch is D2 and the Pehrson ditch is D3, in the attached photos).

8. In the attached photos, LB1 is apparently the point IDWR, Water District 34, and the Big Lost River Irrigation District understood to be my diversion points when they assisted in filling out and ultimately settling my claim in about 1991. LB1 has not been a diversion point for my rights. I understand it has never been used to divert water to ditches.

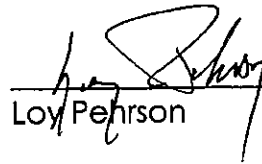

9. There are numerous rights which reflect these errors beyond the ones I am claiming. The "NW" needs to be changed to "NE" for the following decreed water rights:

- a. 34-7573;
- b. 34-12;
- c. 34-10873;
- d. 34-817B;
- e. 34-282B;
- f. 34-856H;
- g. 34-549D; and
- h. 34-491.

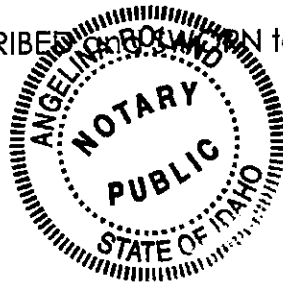

Furthermore, the rights 34-282C and 34-452E, respectively, have had the description corrected already by this Court. Consequently, the Lower Burnett is now described in partial decrees as being diverted at both locations.

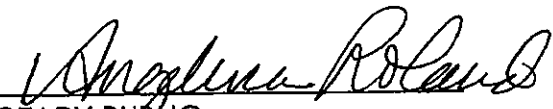

10. The decrees should be changed so they reflect the real location of

the points of diversion. This is necessary to (1) reflect reality; (2) avoid continuing errors in the legal descriptions of the rights including in transfer proceedings before the IDWR; (3) so that I may continue to use my rights, as I have used them for more than thirty years; and (4) so that they may be effectively administered.

Loy Pehrson

SUBSCRIBED and SWORN to before me this 15 day of January, 2010.

RE: DIVERSIONS FROM BIG LOST RIVER NEAR THE LOWER BURNETT

Dear Mr. Pehrson:

At the request of the Water District 34 Watermaster, Nick Miller of the Idaho Department of Water Resources (IDWR) and the Watermaster visited the Low Burnett diversion on Wednesday September 26, 2007. The purpose of the visit was to address the Watermaster's concerns that no valid water right authorizes diversion of water at the "Pehrson diversion", which is located approximately 200-feet upstream of the Low Burnett. The Low Burnett and Pehrson ditch headings are both located in the NW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of Section 24, Township 06N, Range 25E, B.M.

IDWR staff installed identification tags on both the Low Burnett and Pehrson diversions, collected location information using a global positioning system unit, and captured digital photographs of the area. The information collected during the site visit, as well as a review of available aerial photography and IDWR water right records indicates that the Pehrson diversion and ditch was installed subsequent to the start of the Snake River Basin Adjudication (SRBA). It appears the water rights currently diverted at the Pehrson diversion were historically diverted at the Low Burnett and were decreed as such.

IDWR Records indicate eleven water rights held in your name are authorized to divert from the Low Burnett: 34-119C, 34-130, 34-131A, 34-132A, 34-195A, 34-196A, 34-197A, 34-360A, 34-605A, 34-776, 34-13745. Each of these water rights bears a condition of approval that reads:

"Water is delivered through the Beck-McGowan, 3 IN 1, Harris-Vaught, Burnett and Lower Burnett ditches."

IDWR records indicate no transfer has been filed to change the point of diversion for these water rights from the Low Burnett or to add the Pehrson as a legal point of diversion. Therefore, according to IDWR records, you do not have a valid water right or permit authorizing you to divert water at the Pehrson diversion. This constitutes a violation of Idaho Code, Section 42-351, specifically diversion of water not in conformance with a valid water right. That statute provides the director discretion to issue a written Notice of Violation and Cease and Desist

EXHIBIT

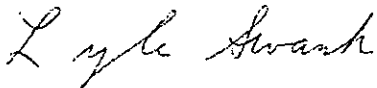

tabbies

A

Order. Please note that issuance of a Notice of Violation can result in monetary civil penalties pursuant to Section 42-1701B, Idaho Code. Additionally, IDWR observed and photographed evidence of recent use of heavy equipment in the stream channel at the Pehrson diversion. The Water District No. 34 Watermaster confirmed that the earthen and rock check structure at the Pehrson Diversion was raised recently. No water right authorizes diversion of water at that location and no permit was issued for the instream work. Therefore, the instream work is in violation of the Stream Protection Act as provided for under Idaho Code. Specifically, the work and constitutes a violation of §42-3803, alteration of a stream channel without a permit. Please note that IDWR has the discretion to pursue an administrative enforcement action that may result in monetary civil penalties pursuant to Section 42-1701B, Idaho Code.

Please contact our office within fourteen (14) days from the date of this letter to discuss these findings and determine a remedy for the unauthorized diversion and Stream Protection Act violation. You may contact Tom Bassista directly at 208-525-7161 regarding this matter.

Respectfully,

Lyle Swank, P.E.
Manager, Eastern Regional Office

MEMORANDUM

Date: January 18, 2008
From: Ernie Carlsen
Water Resource Program Manager
To: File

In mid December 2007 I received a request from Loy and Byron Pehrson to meet with them and discuss resolutions to a problem outlined by Nick Miller in his letter¹ dated December 12, 2007. The letter was mailed to the five water users with decreed water rights listing the Lower Burnett as a point of diversion. It notified them of the error in the legal description for this point of diversion and the importance of getting this corrected prior to the beginning of the 2008 irrigation season. On January 8, 2008, Tom Bassista, IDWR Stream Channel Specialist, and I met with Loy Pehrson, Byron Pehrson, Max Bingham, Doug Rosenkrance, Mike Dotzenrod and Bob Shaffer, Watermaster, on-site at the historic Lower Burnett diversion.

It was the consensus of those present that through the years several changes had been made in how and where water was diverted at the Lower Burnett. They stated an old abandoned concrete structure ("LB1"), is located about ¼ mile upstream from the concrete structure generally recognized as the Lower Burnett heading ("LB2"). They believed LB1 originally directed water into a channel where the present river channel exists. The Darlington Quadrangle topographic map² dated 1969 shows a diversion in S24 T06N R25E which corresponds to the location of LB1. The legal description for LB1 also corresponds with the decreed legal description for the Lower Burnett and seems to provide a basis for why the Water District 34 and the Big Lost River Irrigation District ("BLRID") recognized the NWNWNE S24 T06N R25E as the legal description and subsequently provided the legal description to IDWR in 1991 on a list of canals and legal descriptions³ during claims review in the Snake River Basin Adjudication ("SRBA").

Though the topographic map shows a diversion at LB1 we were told LB2 was constructed in the 1930's. The structure at LB2 is located in the NENWNE S24 T06N R25E and is visible on aerial photographs taken between 1987 and 2004^{4,5,6}. Initially LB2 was used to divert water into a bypass channel intended to convey water around a river reach with large transmission losses. On the upstream side of a concrete regulating structure in the bypass channel about 75 feet from the river was a ditch heading ("D1") used to deliver decreed rights. In order to get water into the bypass channel and D1 the water level in the river had to be raised about three feet. Placing planks across the river at LB2, which proved difficult and dangerous, did this. Unfortunately the concept of

⁵ 1992 Black and White Aerial Photograph

⁶ 2004 True Color Aerial Photograph

MEMORANDUM

using the bypass channel did not work. In the late 1960's, to reduce the difficulty in delivering the decreed rights, the heading for D1 was moved to the river on the upstream side of the bypass channel. This ditch heading ("D2") is easily identified on the 1987 infrared aerial photography. By the late 1980's only the Pehrsons were diverting water at D2. To deliver Pehrson's water rights without having to plank the river at LB2 the BLRID constructed a new head gate ("D3") a few hundred feet up stream and Pehrsons ceased using D2. The advantage of using D3 is sufficient water will go through the head gate with only a small cofferdam of large rock extending part way across the river. Like D2, D3 is also located in the NENWNE S24 T06N R25E. D3 can be seen on aerial photography taken in 1992 and 2004 but is not evident on the 1987 infrared aerial photography. In 1991, BLRID installed a new head gate at heading for D2, this is the diversion for everybody other than the Pehrsons with the Lower Burnett ditch as a decreed point of diversion. Decreed rights for BLRID are diverted at D2 and D3.

Decreed water rights historically recognized as being diverted at the Lower Burnett are being diverted at two locations, D2 and D3. Both have a legal description of NENWNE S24 T06N R25E. How the water users elect to correct the legal description for this point of diversion may depend on when D2 and D3 were established. The evidence and statements by those present at the meeting, clearly supports D2 being in existence prior to November 1987 and therefore qualifies under Idaho Code 42-1426 to be recognized as a valid point of diversion on an SRBA claim based on an accomplished change. However this is dependant on the water users successfully getting the SRBA Court to set aside the partial decrees for rights diverted through this heading and then accepting amended claims listing the correct legal description. Of course these individuals could also file transfer applications with IDWR to make this correction. Regrettably there is conflicting evidence on when the diversion at D3 was established. The Pehrsons have two written statements implying that D3 was in place prior to November 1987. However, as stated above the diversion at D3 does not appear on the 1987 infrared aerial photography. If sufficient evidence is not provided to show D3 was in place and being used in 1987 or earlier the only remedy for correcting the decreed rights of the Pehrsons and the BLRID is for each to file a transfer application with IDWR.

RE: DIVERSIONS FROM BIG LOST RIVER NEAR THE LOWER BURNETT

Dear Mr. and Mrs. Beller:

Two water rights held in your names (34-282B and 34-856H) describe a point of diversion that is not consistent with the location at which the Water District 34 Watermaster delivers your water. You are required to take all necessary actions to bring your water rights and actual water use into conformity.

Water users that have been diverting water or rediverting stored water at the Low Burnett Ditch hold water rights that bear a condition naming the Lower Burnett as a point of diversion. However, these rights each describe a point of diversion (or rediversion of storage water) in the NW $\frac{1}{4}$ of the NW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of Section 24, Township 6 North, Range 25 East (hereafter referred to as the NW tract), and do not describe a point of diversion in the NE $\frac{1}{4}$ of the NW $\frac{1}{4}$ of the NE $\frac{1}{4}$ of Section 24, Township 6 North, Range 25 East (hereafter referred to as the NE tract).

Aerial photographs of the area taken between 1987 and 2004 do not depict a diversion in the NW tract, but the Pehrson and Low Burnett ditches are depicted in the NE tract at least as early as 1992. This suggests that water rights describing a point of diversion in the NW tract may have been claimed incorrectly. Regardless of the circumstance that led to these rights being decreed as they were, diversion of water to the Pehrson or Low Burnett Ditches does not conform with the water rights as decreed.

IDWR recognizes that the current diversion of water from the Low Burnett and Pehrson Ditches has occurred for a number of years and may not be substantially different from what was occurring at the commencement of the SRBA. Nevertheless, it is in the best interest of everyone involved that the water rights and the water usage conform to one another. As such, IDWR will not immediately pursue enforcement actions, but you are required to bring your water rights and actual water use into conformity.

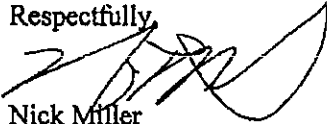

The point of diversion description on the partial decrees may only be changed through an application for transfer or by the SRBA court issuing an amended partial decree.

If, at the start of the 2008 irrigation season, you begin diverting from the Low Burnett and have not initiated efforts to address this issue, IDWR will pursue enforcement actions. Diversion of water not in conformance with a valid water right constitutes a violation of Idaho Code, Section 42-351. That statute provides the director discretion to issue a written Notice of Violation and Cease and Desist Order that can result in monetary civil penalties pursuant to Section 42-1701B, Idaho Code.

John and Barbara Beller
