RE: Amendment of SRBA Claim A43-00192

Dear Claimant:

Pursuant to the approval of Transfer No. 3580, the above referenced Notice(s) of Claim in the Snake River Basin Adjudication have been amended to conform with the transfer. Please find enclosed a printout of the way your claim records have been modified. Please check these modified records over carefully to verify they correctly reflect your intended change. If you have questions please feel free to contact this office.

Sincerely,

A handwritten signature in cursive script that reads 'Trish Fawcett'.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES
SOUTHERN REGION OFFICE

IN THE MATTER OF APPLICATION)
FOR TRANSFER NO. 3580 OF) ORDER APPROVING
WATER RIGHT NO. 43-0192 IN) TRANSFER IN PART
THE NAME OF F. STANLEY LLOYD)

This matter having come before the Idaho Department of Water Resources (department) during the review of application for transfer no. 3580 filed pursuant to Section 42-222, Idaho Code, the Department finds, concludes and orders as follows:

FINDINGS OF FACT

1. On June 8, 1989, F. Stanley Lloyd (applicant) filed an application with the department to transfer 0.8 cfs of water under right no. 43-0192. The application proposed changing the the source of water under this right from Green Canyon Creek to a groundwater source. The application also requested a change in the place of use in order to correct the recorded place of use description and show the actual current place of use and amount of irrigated acreage.

2. The applicant has stated on the transfer application that the natural flow of Green Canyon Creek (shown as Green Creek on 7.5 minute USGS topographic maps) is insufficient for full diversion of water under water right no. 43-0192. The applicant therefore has proposed drilling a groundwater well and diverting groundwater from said well to provide the full rate of diversion allowed under right

43-0192. The applicant further proposes that the priority date of the groundwater diversion should be the same priority date identified under right no. 43-0192, or April 30, 1880.

3. Department records indicate that right no. 43-0192 is the earliest priority right on Green Canyon Creek. Only one other right from the same source has the same priority date as right 43-0192. All other rights from the same source are junior to right 43-0192. According to claims filed in the Snake River Basin Adjudication, all but three of the junior rights are located downstream from the applicant's point of diversion. The one right with the same priority date, right no. 43-0371, is also located downstream from the applicant's point of diversion.

4. Review of the Department's records also indicate that there are no other groundwater rights upstream from the applicant's point of diversion from Green Canyon Creek.

5. The availability of water from Green Canyon Creek has not changed as a result of the activity of man. Stream flows at the applicants point of diversion have not been depleted by the drilling of wells or changes in upstream diversions. Water unavailability resulting from drought conditions should not justify approval to divert groundwater with a priority date equivalent to the earlier surface water right.

6. Approval of the transfer providing the applicant the ability to divert groundwater under an 1880 priority date surface water right when surface water is not available for delivery under right 43-0192 is an expansion of the original right. Such expansion may result in injury to downstream rights.

CONCLUSIONS OF LAW

1. Section 42-222(1), Idaho Code provides direction and authority to the department in the review and approval of water right transfer applications. The statute states in part:

The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, and the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-203A(5), Idaho Code.... In the event that the director of the department of water resources determines that a proposed change shall not be approved as provided in this section, he shall deny the same....

2. Approval of the proposed change in point of diversion and source of water from Green Canyon Creek to groundwater would result in an expansion of right no. 43-0192. The proposed changes may further result in injuries to downstream rights.

3. Application for Transfer No. 3580 of Water Right no. 43-0192 requesting a change in point of diversion and source of water from Green Canyon Creek to groundwater should be denied. The proposed change in place of use which corrects the recorded water right place of use should be approved.

ORDER

IT IS HEREBY ORDERED that Application for Transfer No. 3580 of Water Right No. 43-0192 which requests a change in the point of diversion and source of water is DENIED. IT IS FURTHER ORDERED that the requested change in the place of use is APPROVED subject to the following conditions:

1) The change authorized by this transfer shall be accomplished within one (1) year of the date of this approval.

2) Failure to comply with the conditions of this transfer is cause for the director to issue an order to show cause why the approval of the transfer should not be rescinded.

3) Partial approval of this transfer does not preclude the opportunity for review of the validity of the water right(s) in the ongoing Snake River Basin Adjudication.

Dated this 11th day of February, 1992.

L. GLEN SAXTON, Chief
Water Allocation Bureau

MEMORANDUM

To: Norman C. Young
From: L. Glen Saxton 
RE: APPLICATION FOR TRANSFER OF RIGHT 43-0192
Date: May 22, 1990

The attached file is an interesting one. The applicant has filed a transfer to add a groundwater point of diversion to his surface water right. The intent is to claim the priority of the surface water for water diverted from the proposed well.

The application has not been advertised. S. Region would like not to advertise it since approval is not likely.

There are several options for action including the return of the application for transfer and drilling permit application together with fees to the applicant advising that the application is not acceptable and will not be processed. The reason for unacceptability would be that section 42-222, Idaho Code, does not provide for a change in the source of water. Depending on the tenacity of the applicant, the matter might die or might result in the service of a writ of mandamus requiring action by the department.

There may be future intent of others in this basin or in the state to do this same type of filing. Hence, I suggest the application be advertised and denied with a memorandum decision and order unless we wish the matter to be addressed in the Snake River Adjudication. The adjudication could be the vehicle to use, since it is my understanding that adjudication claims have been filed which claim diversion of groundwater with the same priority as the older surface water rights.

Your comments will be appreciated.

To Idaho Department of Water Resources:

As mortgage holders The Farmers Home Administration has no objection to this application by F. Stanley Lloyd to use the underground water to fulfill the surface right decreed to Lot 4 SE $\frac{1}{4}$ Sec 12 TWP 14s R27E Cassia County Idaho.

Re: Well drilling permits and Application for transfer of water
right No. 43-0192

Dear Mr. Lloyd:

This office is in receipt of your request to proceed with action on your application for transfer and applications for drilling permits for yourself, Bruce Turner, and Wayne Whitaker.

The \$30.00 fee submitted is insufficient for the three drilling permits, however, we are receipting the check and applying the amount submitted first to the Turner and Whitaker Drilling permits, and second to your own drilling application. Your receipt and approved drilling permits for the Turner and Whitaker wells are enclosed.

An additional \$90.00 in fee is due on your own drilling application. It may be premature to submit the additional fee now because the department will not act on your drilling application until action is taken on the water right transfer.

If you have any questions regarding this matter, please let us know.

Very Truly yours,

Loren O. Holmes, P. E.
Southern Region Manager

approved 2-11-92.

43-DBPOD.SHP

NOS. DESCRIPTION
28 Sec 1/1 NWSWSE (shared with other users).
Green Canyon Cr.

The redirection point claimed @ 14S, 24E, Sec 12, SWNWSE
describes the point where the Green Canyon diversion is
measured and any excess diverted water is channeled back
to Green Canyon Cr. This is not considered as a redirection
point, it rather, is a point of control. Stan measures
his share of Green Canyon Cr. Water in Sec 12 SWSWSE.

GREEN CANYON CREEK / SPRINGS, PLACE OF USE

43-00192 ANALYSIS

The source for this right is Green Canyon Creek. The point of diversion and delivery system are shared with other claimants on different places of use (P/D overlap). Transfer 3580 was approved on 2-11-92 to correct the place of use for this right. The transfer was approved for a total irrigated place of use of 45 acres. This analysis starts with the premise that the transfer established the place of use by quarter/quarter as of 1992 and therefore I cannot recommend acres in excess of the number of acres identified by the transfer. Any changes to the system creating a change in the place of use would necessarily require a new transfer. As the transfer specifically established the place of use, I cannot recognize an unrecorded transfer of the place of use after that date. The transfer was also filed to change the source from Green Canyon Creek to groundwater. That portion of the transfer was disallowed.

I conducted a field examination on 7-28-94 and interviewed Stan Lloyd on 10-27-99 at his home. The transfer identified four different quarters as parts of the irrigated place of use. See the table below.

	Sec 12		Sec 7		
	SWSE	SESE	NWSW	SWSW	
Claimed and transfer approved acres	23	17	1	4	45
Found irrigated acres	9.1	32	1.7	7.1	
Recommended acres	9.1	17	1	4	31.1

Analysis of Sec 12 SW $\frac{1}{4}$ SE $\frac{1}{4}$

The transfer identified 23 irrigated acres within that quarter/quarter and I found 9.1 irrigated acres. Through the field examination and my conversations with Stan Lloyd, I identified approximately 14 acres that had been irrigated prior to 1992 but were no longer being irrigated. The delivery system from Green Canyon Cr. ditch that irrigated the 14± acres was replaced with a different diversion from the same ditch approximately 800 feet downstream from that diversion. According to Stan Lloyd this occurred in 1992.

Analysis of 13.9 acres no longer being irrigated.

1. The transfer established the place of use as of 1992.
2. The irrigation system changed subsequent to that date.
3. No irrigation was possible after 1992 for the 13.9 acres.
4. No legal remedies were sought to protect those acres.
5. The acres are currently not being irrigated.

I am recommending that the 13.9 acres no longer irrigated in the SW $\frac{1}{4}$ SE $\frac{1}{4}$ for forfeiture based upon non-use from 1992 through the present.

Analysis of SESE of Sec 12, and all irrigated quarters of Sec 7

The diversion point that was developed approximately 800 feet downstream from the original diversion carries water roughly through the center of the place of use and can also be diverted into the southern most spring delivery system. Through various secondary ditches, Green Canyon Creek water can be applied to the balance of the place of use. There was a pipeline coming from the Green Canyon ditch in the NWNW of Sec 13 that ran north into the place of use but Stan indicated that this system had been abandoned also. This diversion would have irrigated much of the same place of use as covered by the same southern spring system mentioned above. The transfer established the maximum number of irrigated acres in each of the three remaining forties and I found irrigated acres that exceeded the transfer acres for all three. Therefore I am recommending the acres by quarter/quarter as established in the transfer.

43-04074 ANALYSIS

There are three distinctive diversion points for the spring seeps within the claimed place of use. Although the three diversion points are independent, the place of use under the three diversions overlap and are operated together to completely irrigate the found place of use. Therefore, I accept the three diversions as one system under one claim. The diversion rates from the three locations are additive to determine the legal limit for the recommended diversion rate. A portion of the place of use is normally a wetland and does not require additional water but can dry up in the late fall and require irrigation at that point.

There is one point of diversion in the SE $\frac{1}{4}$ SE $\frac{1}{4}$ that goes into a ditch that runs easterly to the northeast corner of the place of use. Water flows generally southeast from the ditch. Scott King provided a mannings analysis for data recorded by Allen Merritt and Kelly K Christensen. The spring was identified as spring # 8. The calculations gave a system capacity for this ditch system as 0.77 cfs.

A second point of diversion is in the NE $\frac{1}{4}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$. That diversion is tied into a pipeline the runs generally south to the central drainage running through the claimed place of use. Gravity flow is east to southeast from this pipeline. No diversion capacity was calculated for this point of diversion.

The third diverted spring is located in the SW $\frac{1}{4}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$. The ditch from this point of diversion runs virtually straight east along the southern side of the property and forms the southern most boundary for the place of use. Water flows north to northeast from this ditch. Green Canyon Creek water can be diverted into this system. Scott also analyzed this spring from data prepared by Allen and Kelly. The system capacity was determined to be 1.13 cfs.

I am recommending this claim for all found irrigated acres as spring water can reach the entire place of use for one inch per acre or 1.00 cfs as the system capacity exceeds the one inch per acre legal limit.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE

STATE OF IDAHO

RECEIVED
JUL 11 1989
Department of Water Resources
Southern Region Office

IN THE MATTER OF APPLICATION)
FOR TRANSFER NO. 3580 OF) ORDER APPROVING
WATER RIGHT NO. 43-0192 IN) TRANSFER IN PART
THE NAME OF F. STANLEY LLOYD)

This matter having come before the Idaho Department of Water Resources (department) during the review of application for transfer no. 3580 filed pursuant to Section 42-222, Idaho Code, the Department finds, concludes and orders as follows:

FINDINGS OF FACT

43-0192
1. On June 8, 1989, F. Stanley Lloyd (applicant) filed an application with the department to transfer 0.8 cfs of water under right no. 43-0192. The application proposed changing the the source of water under this right from Green Canyon Creek to a groundwater source. The application also requested a change in the place of use in order to correct the recorded place of use description and show the actual current place of use and amount of irrigated acreage.

2. The applicant has stated on the transfer application that the natural flow of Green Canyon Creek (shown as Green Creek on 7.5 minute USGS topographic maps) is insufficient for full diversion of water under water right no. 43-0192. The applicant therefore has proposed drilling a groundwater well and diverting groundwater from said well to provide the full rate of diversion allowed under right

43-0192. The applicant further proposes that the priority date of the groundwater diversion should be the same priority date identified under right no. 43-0192, or April 30, 1880.

3. Department records indicate that right no. 43-0192 is the earliest priority right on Green Canyon Creek. Only one other right from the same source has the same priority date as right 43-0192. All other rights from the same source are junior to right 43-0192. According to claims filed in the Snake River Basin Adjudication, all but three of the junior rights are located downstream from the applicant's point of diversion. The one right with the same priority date, right no. 43-0371, is also located downstream from the applicant's point of diversion.

4. Review of the Department's records also indicate that there are no other groundwater rights upstream from the applicant's point of diversion from Green Canyon Creek.

5. The availability of water from Green Canyon Creek has not changed as a result of the activity of man. Stream flows at the applicants point of diversion have not been depleted by the drilling of wells or changes in upstream diversions. Water unavailability resulting from drought conditions should not justify approval to divert groundwater with a priority date equivalent to the earlier surface water right.

6. Approval of the transfer providing the applicant the ability to divert groundwater under an 1880 priority date surface water right when surface water is not available for delivery under right 43-0192 is an expansion of the original right. Such expansion may result in injury to downstream rights.

CONCLUSIONS OF LAW

1. Section 42-222(1), Idaho Code provides direction and authority to the department in the review and approval of water right transfer applications. The statute states in part:

The director of the department of water resources shall examine all the evidence and available information and shall approve the change in whole, or in part, or upon conditions, provided no other water rights are injured thereby, the change does not constitute an enlargement in use of the original right, and the change is consistent with the conservation of water resources within the state of Idaho and is in the local public interest as defined in section 42-203A(5), Idaho Code.... In the event that the director of the department of water resources determines that a proposed change shall not be approved as provided in this section, he shall deny the same....

2. Approval of the proposed change in point of diversion and source of water from Green Canyon Creek to groundwater would result in an expansion of right no. 43-0192. The proposed changes may further result in injuries to downstream rights.

3. Application for Transfer No. 3580 of Water Right no. 43-0192 requesting a change in point of diversion and source of water from Green Canyon Creek to groundwater should be denied. The proposed change in place of use which corrects the recorded water right place of use should be approved.

ORDER

IT IS HEREBY ORDERED that Application for Transfer No. 3580 of Water Right No. 43-0192 which requests a change in the point of diversion and source of water is DENIED. IT IS FURTHER ORDERED that the requested change in the place of use is APPROVED subject to the following conditions:

1) The change authorized by this transfer shall be accomplished within one (1) year of the date of this approval.

2) Failure to comply with the conditions of this transfer is cause for the director to issue an order to show cause why the approval of the transfer should not be rescinded.

3) Partial approval of this transfer does not preclude the opportunity for review of the validity of the water right(s) in the ongoing Snake River Basin Adjudication.

Dated this 11th day of February, 1992.

L. GLEN SAXTON, Chief
Water Allocation Bureau

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES

DUE TO SOURCE DISCREPANCY? (Y/N)	Y	<u>Y</u>

NOTES:

The P/D from Green Canyon Creek was found to be just west of the claimed P/D. The Rediversion point claimed in Sec 12 is the point where the measurement device is located and where any excess diverted water is turned back to Green Canyon Creek. That point is not recognized as a rediversion point and is therefore deleted from the recommendation.

C. ARE OTHER WATER RIGHTS USED? ☒ (Y) ☐ (N) IF YES COMPLETE OVERLAP REVIEW.

OTHER RIGHTS LISTED IN CLAIM: A43-04074 - *Spring Sources.*

LIST ALL RIGHTS WITH A SAME POU AND IRRIGATION USAGE:

CLAIM NO.	SOURCE	NAME	DIV. RATE	DIV. RATE/ACRE	DIV. VOL.	DIV. VOL./ACRE
A43-00192	GREEN CANYON CREEK	LLOYD, F. STANLEY	0.800	0.010		
A43-04074	SPRINGS	LLOYD, F. STANLEY	1.200	0.016		

LIST ALL RIGHTS WITH SAME POU BUT NOT USED FOR IRRIGATION.

CLAIM NO.	PURPOSES	NAME	MONTH/DAY	RATE	VOLUME
A43-04074	STOCKWATER	LLOYD, F. STANLEY	FROM 01-01 TO 12-31	.030 CFS	

D.

RATE/VOLUME CALCULATIONS: (IRRIGATION)

1a. IRRIGATION RATE

ACRES 31.1 x 0.02 CFS/ACRE = .622 CFS
(Taken from p/u review)

DOES AMOUNT CLAIMED EXCEED 0.02 CFS/ACRE? Y(X) N()

*** IF YES ADDITIONAL WATER USE FORM FILED AND ATTACHED? Y() N() ***

2. IRRIGATION CONSUMPTIVE USE

CLAIMED CONSUMPTIVE USE = 185.0 AF/A

ACRES x CONSUMPTIVE VOL. AF/A FOR AREA =

TOTAL CONSUMPTIVE USE AF/A

3. IRRIGATION DIVERSION VOLUME

CLAIMED DIVERSION VOLUME = AF/A

ACRES x DIVERSION VOL. AF/A FOR AREA =

TOTAL DIVERSION VOLUME AF/A

4. CALCULATIONS FOR USES OTHER THAN IRRIGATION:

SEE ATTACHED SHEET? Y() N()

NOTES: (Include limitations on CONSUMPTIVE USE for combined rights.)

1b. CALCULATIONS

recommend 1"/acre or .62 CFS
the Jobe Adams decree states that
the duty of water is 1"/acre. Because
I am recognizing partial forfeiture of
13.9 acres the actual irrigated place
of use is now 31.1 acres. See narrative
for additional info. K/KC

SOUTHWEST
SPRING

CLAIM # A43-00192, 04074
DATE PHOTOS TAKEN; 7-29-94
PICTURE SET # 1

This photo set shows the SW spring diversion and a portion of the P/U. The spring head is around the tree in the foreground with the ditch running right toward the caterpillar on the left. The normal channel runs to the left of the ditch but is not visible because of the willow growth in the foreground. The current diversion from the Green Creek ditch is just out of the picture range to the left. That diversion is shown in picture set 2. Another diversion from the Green Creek ditch that has been in use up until this year carried water across the grass and sagebrush slope beyond the brush on the left (shown in set # 3).

PICTURE # 3 LOCATION

DITCH

EAST END OF P/U

CLAIM # A43-00192, 04074
DATE PHOTOS TAKEN; 7-29-94
PICTURE SET # 2

This photo set shows the current diversion from the Green Creek Ditch and measuring device. This water drops into a natural swale and primarily irrigates the east half of the P/U. You are looking north northeast on the left to northeast on the right.
