Mr. Crumley;

This letter is in response to our discussion about your irrigation system. In review of your system and past power usage I have come to the following conclusion.

The oldest power records available to show the usage on this pump was in April of 1951. The pump at this time was using 75 KW, this would convert to about an even 100 HP. Knowing the lift in this area and approximate operating pressure on the system we can assume that at this time the pump was delivering approximately 1325 gpm or 2.95 cfs.

In 1983 the pump was upgraded to 125 HP. The power usage from this time on shows the pump using 110 KW. This converts to 147 HP. Using the same lift and operating pressure this would have the pump delivering approximately 1815 gpm or 4.04 cfs.

On 10/29/98 I visited the site and recorded the flow at this time. The test results show that the pump is delivering 2050 gpm or 4.56 cfs at this time. The operating pressure was lower than I had assumed it would be, which could be due to some leakage in the system allowing the pump to pump slightly more than I had anticipated.

I hope these figures are helpful to you and if I can be of any more assistance feel free to contact me at the Blackfoot Idaho Power office, or you can call me at 236-7744.
