E. NARRATIVE/REMARKS/COMMENTS

The water for this permit is diverted from a 40 Hp well in the SWSE of Section 4 through a 10-inch mainline. The mainline travels approximately 40 ft north to a 40 Hp booster. The booster send the water due west through a 10" mainline to feed wheel lines that irrigate the east field. At the end of the east field there is a 25 Hp booster that re-pressurizes the water through a mainline traveling west approximately 1/8 mile where the mainline T's. At the T the water travels north and south and delivers water to a series of hand lines that irrigate the west 80 acres. Originally 2 other wells added water to this system under water right 63-02995, but the wells were not very productive. The owner quit using these well and upgraded the boosters on this system so he could pump all of the water from both rights through this well. The owner has not filed a transfer to do this, but it was done shortly after this well was put into production in the late 1960's, therefore an accomplished transfer in the SRBA on 63-02995 should cover the increased water use from this well.

OVERLAP: There are 2 overlapping rights for this ground. The first right is 63-02995 that irrigates the same property, but is from a different well. As I mentioned above the owner of this right now pumps 63-02995 through the well associated with this permit through an accomplished transfer. The second right 63-02881 shows the irrigation of 25 acres within the place of use for this permit. When I spoke with the owner about this license he state that it must be a mistake because the owner of 63-02881 has never owned or irrigated the 25 described by the license. 63-02881 was not claimed in the SRBA, so I think it was an old license that was incorrectly described and is no longer used.

RECOMMENDATIONS: I recommend that this permit be licensed for 2.00 cfs diversion rate and 544.5 afa to irrigate 121 acres. When combined with 63-02995 these rights should be limited to 2.42 cfs and 544.5 afa for 121 acres of irrigation. The owners should not be allowed to use more than .02 cfs or 4.5 afa per acre. No season of use was given in the permit, so I recommend that the current standard of 3/1 to 11/15 be used for this permit.

DIVERSION RATE CALCULATION SHEET

COX HALL FLOW MEASUREMENT:

The original field examiner made a Cox Hall flow measurement in 1966. The following are the field examiner's calculations:

$$D = 7 \frac{13}{16} = 47.937 \times 17 \text{ Diff.} = 815 \text{ gpm} / 448.8 \times 1.11 = 2.00 \text{ cfs}$$

In order to determine if this was an accurate measurement I used supporting information to double-check the measurement. The original field examiner stated that there were 3 sprinkler lines with 33 3/16 nozzles in each line for a total of 99 3/16 nozzles. I calculated the pressure needed to operate these nozzles at this diversion rate.

$$2.00 \text{ cfs} \times 448.8 = 897.6 \text{ gpm} / 99 = 9.06 \text{ gpm per nozzle}$$

The University of Idaho Fact sheet in the Field Examiners Handbook shows that a pressure of 75 psi would be needed to operate these sprinklers at 9.06 gpm.

I also performed a theoretical calculation using the well log and the boosters horse power.

$$\frac{(8.8) \times (40 \text{ Hp well} + 25 \text{ Hp booster} + 15 \text{ Hp booster}) \times (0.70)}{110 \text{ ft static water level} + (75 \text{ psi} \times 2.31)} = \frac{492.8}{282.5} = 1.74 \text{ cfs}$$

The sprinkler check shows that the sprinklers were operating at a little higher psi rate than normal, but they are still within standard practices. The theoretical also shows that the well and boosters were really not strong enough for this high of diversion rate. However, each of the pumps and boosters did have a 1.15 service factor that could raise the combined horsepower to 92, which would increase the theoretical diversion rate to 2.00 cfs. The supporting documentation does show that even though the system was being worked extremely hard, that it is reasonable to go with the measurement and allow a 2.00 cfs diversion rate. I recommend that the diversion rate for this permit be licensed at 2.0 cfs.

PLEASE NOTE: A new measurement could not be performed on the well at the time of my field examination. The 25 Hp booster was upgraded to a 40 Hp booster and the 15 Hp booster was upgraded to a 25 Hp booster. Therefore, in order to license the original amount of water diverted we must use the original system.

Dear Sirs:

Enclosed is the Notice of Claim to a Water Right for Water Right No. 63-03264 that you recently submitted to our office. We are returning the claim due to some discrepancies between the original water right and the claim that you have filed. In addition the required filing fee was not submitted with the claim. Also enclosed is an additional claim form and instructions for Permit No. 63-03268, which also requires a claim be filed in the Snake River Basin Adjudication.

We are enclosing profile reports for right nos. 63-03264 and 63-03268, so that you can base your claims on the original water rights. As you can see 63-03264 has been Licensed for 145 acres of irrigation in Township 3N, Range 4W, Section 24 and 63-03268 is a Permit for 121 acres in Township 3N, Range 4W, Section 4. You must show the number of acres irrigated in each quarter-quarter. One quarter-quarter section is 40 acres.

The filing fees for irrigation claims are \$50.00 flat fee, per claim, plus \$1.00 per acre.

Please complete these claims and return to our office with the appropriate filing fees for processing. If you have any questions regarding these claims, feel free to contact a Water Right Agent in our office, or schedule an appointment to come in and have an agent assist you with these claims.

Sincerely,

A handwritten signature in cursive script that reads "Lori Harris".
