The diversion rate for this water right recognizes and maintains the historical diversion rate for irrigation of the 360.4 acre place of use for this water right. No future transfer can remove all or any portion of this water right from this place of use or change the nature of use of all or any portion of this water right without removing the irrigation water from and diverting up a proportional number of irrigated acres within this place of use. If all or part of this water right is transferred to a new place of use or a new nature of use, the quantity of water available for transfer shall be limited to no more than 0.48 cfs per acre unless a greater quantity can be justified for the new use based on acceptable irrigation practices or contemporary standards for efficient use of water.

RE: Subcase No. 75-4089 (Edwards)

Dear Julie:

I am enclosing a Standard Form 5 ("SF5") for filing. You will note that there are two copies of the revised recommendation attached to the SF5. The contents are the same, but because the document has been faxed previously, the image quality is not that good. Therefore, we are also providing a more legible copy.

If you should have any questions, please don't hesitate to contact me at 287-4815.

Sincerely,

A handwritten signature in cursive script that reads "Ray Williams".
