NOTES: 10/30/1996: The acres found in the NWSW of S-14 are not the acres covered by A63-08448. A63-08448 covers the 8 acres which are continuous to the fields in the SWSW of S-14. Additional acres are located south of the canal & north of the what appears to be a driveway and are continuous with the field to the east. These acres show as white on the NAPP. The acres are shown as irrigated on the ASCS map in the BLU exam (attached) but the permit was not amended to include these acres. It may be that ground water is not used on the acres in the NWSW of S-14. If this is a separate field the irrigator may not put ground water on this particular field. However based on the system description in the BLU exam, ground water is used to supplement surface water and the same system is used to deliver water from both sources.

Another area where the acreage is not clear is the NWSW of S-23. The field in the SWSW looks continuous with the field to the south (NAPP). There may be a fence line separating the NWSW from the SWSW but the ASCS map in the BLU exam also seems to indicate that the fields south of the canal in the ~~SWSW~~ NWSW
