 Pump operating today. Discharge from the pump goes through 19 feet of 8" I.D. pipe to a stilling pool which can also be supplied by gravity from Deer Flat High Line Canal. From this pool a pump lifts water through the system irrigating land in the northwest $\frac{1}{4}$ of Section 9, Township 3 North, Range 4 West. Irrigation of a maximum of about 110 acres is anticipated. Irrigation season usually April 15 to Oct. 15. Because of cheaper cost, Mr. Kincheloe buys surplus water and uses it in the system when it is available in the adjacent Deer Flat High Line Canal, in lieu of water from the well. ☐ See Remarks on page 4 for continuation

2. Measurements:

Both rotor type meters are calibrated for the 8" I.D. pipe to read rate of flow in 10s of gallons per minute and to totalize in 1000s of gallons.

My rotor was installed with the rotor axle installed at the recommended depth in the 8" pipe of 1 inch, which is the depth at which average velocity in the pipe cross-section has been found to occur.

H. REMARKS AND OVERLAP REVIEW ANALYSIS

Mr. Richard Kincheloe says early in the pumping season before drawdown occurs that the pump in the well reaches rates of 1000 gpm. This rate is desirable at times for his orchards. He estimates duty of the tract to be 5.0 acre-feet per acre because of the loose, light, sandy soil. The growing season at 2600 feet is among the longest in Idaho.

I. RECOMMENDATIONS

1. Recommended Amounts

Beneficial Use	Period of Use From To	Rate of Diversion Q (cfs)	Annual Volume V (afa)
----------------	--------------------------	------------------------------	--------------------------

700 gpm for 180 days equals 557 acre feet or practically equivalent to 5 acre-feet for the 110 acres proposed.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

This is to certify that I have examined Application for Permit to appropriate the public waters of the State of Idaho No. 63-10426, and said application is hereby APPROVED.

1. Approval of said application is subject to the following limitations and conditions:

- a. SUBJECT TO ALL PRIOR WATER RIGHTS.
- b. Proof of construction of works and application of water to beneficial use shall be submitted on or before August 1, 1989.
- c. The rate of diversion, if water is to be used for irrigation under this permit, when combined with all other water rights for the same land shall not exceed 0.02 cubic feet per second for each acre of land.
- d. The water right acquired under this permit if for hydropower purposes shall be junior and subordinate to all rights to the use of water, other than hydropower, within the State of Idaho that are initiated later in time than the priority of this permit and shall not give rise to any right or claim against any future rights to the use of water, other than hydropower, within the State of Idaho initiated later in time than the priority of this permit.

e. Other: Permit holder shall commence the excavation or construction of diverting works within one year of the date this permit is issued and shall proceed diligently until the project is complete.

If construction of the well under this permit was not initiated prior to July 1, 1987, commencement of well construction or diversion of water under this permit is prohibited unless a drilling permit is obtained from the Department.

Prior to the diversion of water under this permit a flow measurement port or other device as specified by the Department shall be installed to provide for the installation of measuring equipment and the determination of the rate of diversion by the Department.

Witness my hand this 23rd day of July, 1987.
