Subject: SF-5 anomalies: 37-07707, Parker Gulch, LLC

Carter,

RE: SF-5 anomalies: 37-07707, Parker Gulch, LLC

1. Most of the POU (RecPOU shapefile) is on private land within Mineral Survey 605 (SWSW, SESW, S10, T04N, R18E), however neither the license nor the SF-5 includes any acres on private land within the SWSW, S10. Should the shapefile be trimmed to exclude the SWSW, or should the SF-5 include some acres in the SWSW on private land?

2. The SF-5 describes 5.0 ac within the NWNW, S15, however the shapefile is only 4.05 ac in size and 1.71 ac of that is on FS land (Sawtooth NF) within Lot 12 (NWNW), S15, T04N, R18E. Should the shapefile be increased by 1 acre or should the SF-5 acres be reduced by 1 acre (or more if no special use permit on FS)?

3. The SF-5 describes POUs in NENE and SENE, S16 that are not included in the shapefile. Should the shapefile be adjusted to include these POUs, or should the SF-5 be adjusted to exclude these POUs. The map attached to the IDWR Field Report for licensing shows these acres are entirely on FS land. Do they have a special use permit from the FS?

BLM isn't affected by these issues and is just forwarding apparent anomalies found during its review of the SF-5.

Fred
