EXHIBIT E

Item 5: Description of existing diversion works:

The current lake water pumping facility was constructed around 1930. The screen “well” is 32 feet deep and consists of a 20” pipeline that runs from an intake on the lake bed. The intake is located approximately 1,000 feet from the shore at an approximate depth of 100 feet. The intake has a steel screen preventing the entry of debris into the pipeline. The screen well has two 200 hp vertical turbine pumps. The pumps are connected to a transmission main which feeds water up Tubbs Hill to two storage reservoirs (the original storage tank dates from 1903). From there it flows back down the hill by gravity into the distribution system.
