RE: 78-4102A

Dear Mr. & Mrs. Boldman:

We have reviewed your Notice of Error Reply and our Preliminary Recommendation. The Snake River Adjudication Claim was based on 78-4102 that listed 9 acres of irrigation. That water right was split between you and Mr. Updegrove with ½ acre going to him and 8.5 acres to you. We did make an error in calculating the amount of water that we recommended last year. The Idaho Code allows 0.02 cfs per acre for irrigation. The calculation should have been 0.02 cfs x 8.5 acres = 0.17 cfs. We increased the amount approximately 30% for the sandy soil, which results in a total of 0.24 cfs.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ken Knoblock', is written over a horizontal line.

AMENDED

CLAIM TO A WATER RIGHT

Under the provisions of Section 42-243, Idaho Code, any person using or claiming rights to the public waters of Idaho established by diversion and application to a beneficial use must file a claim with the Department of Water Resources on or before June 30, 1983. Exempted from this filing are single family domestic uses as defined in Section 42-230(d), Idaho Code. Also exempted are rights represented by a permit, license, decree, adjudicated right, or a previously filed claim.

The filing of this claim does not confirm the water right claimed but failure to file may result in forfeiture of a water right.

Notice is hereby given that B. Edward &/or Wilma C. Roberts
(Name of Claimant)

Box 119, Riggins, ID 83549 Telephone No. 628-3820
(Mailing Address) (Zip Code)

claims a right to the diversion and beneficial use of the surface or ground water. The extent and nature of said claim is as follows:

- (1) Date of priority: (When was the water first applied to a beneficial use) 1896

A claim is not acceptable on a ground water source with a priority later than March 25, 1963 or on a surface water source with a priority later than May 20, 1971. An exception is that a claim may be filed on single family domestic use from a ground water source.

- (2) Describe the source of water: (Name of stream, lake, spring, etc., or ground water)
Squaw Creek tributary to Little Salmon River

- (3) Describe the purpose for which the water has been used and the time during the year when you have used the right claimed:

(cfs, gpd, AFAI)				

- (5) A) Point of diversion: (Location of point where water is diverted from its source)
SW 1/4 NE 1/4, Sec. 17 Twp. 24N Rge. 1E B.M., County of Idaho
Additional points of diversion:

B) Describe means of diversion of water: (Pump and pipeline, well, diversion dam, reservoir, length of ditch and field, etc.). Give sizes and capacities: be as specific as possible. Describe any changes in the system and give the date of the change. Diversion dam with gravity flow ditch.

- (6) A) Describe location of use by listing number of irrigated acres within each 40-acre tract in appropriate box. If use is not for irrigation, place an "X" in appropriate box to show location.

No. of acres 9

B) If water is used for other than irrigation, fully describe that use, being as specific as possible:

NOTE: Include here the type and number of stock watered:

- (7) If you are claiming water as a member of an organization, list name of organization:

MICROFILMED

1. Peak crop water requirements during the growing season.
2. Effective crop rooting depth.
3. Texture and infiltration rate of the soil.
4. The available water holding capacity of the soil.
5. Pumping capacity of the well or wells (if wells are the water source).
6. The State Water Commission permitted pumping rate.

Table 1 shows the system capacity you need for the most common irrigated crops in North Dakota and various soil textures. To use this table, you must determine the dominant soil texture in the field and what type of crops you will grow (the crop rotation), then determine the appropriate system capacity.

Table 1. System Capacity in gallons per minute per acre (gpm/acre) for different soil textures needed to supply sufficient water for each crop in 9 out of 10 years. An application efficiency of 80% and a 50% depletion of available soil water were used for the calculations.

Crop	Root Zone Depth (ft)	Coarse Sand and Gravel	Sand	Loamy Sand	Sandy Loam	Fine Sandy Loam	Loam and Silt Loam
POTATOES**	2.0	8.2	7.5	7.0	6.4	6.1	5.7
DRY BEANS	2.0	7.9	7.1	6.4	6.1	5.7	5.4
SOYBEANS	2.0	7.9	7.1	6.4	6.1	5.7	5.4
CORN	3.0	7.3	6.6	5.9	5.5	5.3	4.9
SUGARBEETS	3.0	7.3	6.6	5.9	5.5	5.3	4.9
SMALL GRAINS	3.0	7.3	6.6	5.9	5.5	5.3	4.9
ALFALFA	4.0	6.8	5.9	5.6	5.1	5.0	4.5

** Adjusted for 40% depletion of available water

For example, if you plan a rotation of potatoes, corn and alfalfa on a loamy sand, you can determine from Table 1 that potatoes require 7.0 gpm/acre, corn 5.9 gpm/acre and alfalfa 5.6 gpm/acre. You would select a design system capacity for the crop requiring the largest amount, in this case the potatoes at 7.0 gpm/acre. If you install a center pivot system covering 130 acres, you would need about 910 gpm for proper design. However, what you need for proper design and what a well will produce is frequently different. As a general rule, under full season irrigation, you need a minimum of 6 gpm/acre is required because most of the soils irrigated in North Dakota are loamy sands or sandy loams. You can use a lesser flow rate, but you will need to do more intensive water management.

A sprinkler system must be design-ed to apply water uniformly without runoff or erosion. **The application rate of the sprinkler system must be matched to the intake rate of the most restrictive soil in the field.** If the application rate exceeds the soil intake rate, the water will run off the field or relocate within the field resulting in over- and underwatered areas.
