I found 3 P/Ds. one P/D for the North spring and two P/Ds for the south spring. The head of both springs are within Sec 31 NE 1/4 NE 1/4. The North spring diversion is a ditch that crosses the spring channel. the ditch is a continuation of the delivery system from Clyde Creek and is running from the north to the south along the western property boundary fence. This same ditch eventually reaches the pond that is part of the delivery system of the Southern spring. The Northern spring channel east of the Clyde Creek ditch is also used as a delivery system to irrigate portions of the P/D. (cont on p 5)

SYSTEM ANALYSIS FOR GARY NELSON

CLAIMS: A43-00062, A43-00063, A43-00064, AND A43-04082

The property is physically divided by Cassia Creek with each side operated as independent irrigation systems. Specific rights are used on each unit.

WEST SIDE SYSTEM

The appurtenant claims are:

<u>CLAIM</u>	<u>SOURCE</u>	<u>DECREED RATE</u>	<u>FOUND RATE</u>	<u>COMMENTS</u>
A43-00062	Springs	0.30 cfs	1.21 cfs	
A43-04082	Springs	1.10 cfs		same springs as A43-00062
A43-00064	Clyde Cr	1.60 cfs	4.26+ cfs	some water bypasses MD, system not at cap.

SYSTEM ANALYSIS

The system is flood irrigation using a ditch system. The property irrigates from west to east-southeast with the Clyde Creek source being able to irrigate all the recommended place of use.

Clyde Creek source

The Clyde Creek diversion is a shared diversion and delivery system. The recommended P/D is at the headgate that is approximately 30 feet NW of the parshall flume. Clyde Creek has braided channels within this general location with this diversion being on the northeasterly most channel. During times of low water rocks are used to control the amount of water going down each channel, although, that point is not recognized as a P/D.

Springs Source

The spring source ties into the same ditch delivery system and can irrigate all of the place of use except for a portion of the north half. There are two separate springs approximately 500 feet apart that rise on John Nye's property. The north spring rises approximately 300 feet and the south spring rises approximately 600 feet west of the property boundary fence. The north spring is diverted at the property line by the Clyde Creek ditch system that initially enters the property at the northwest corner of section 32. That ditch continues south along the property boundary to and past the next spring channel. The spring channel continues southeast from the property line and is used as a conveyance system to deliver water to various laterals.

The southern spring is diverted at two different points. The first diversion is into a separate ditch that carries the water southeast to the property boundary about 40 feet south of the spring

channel and then turns south to follow the fence line. The second diversion is a small pond that holds slightly less than one acre-foot of water. There is a valved pipe exiting the pond at ground level that controls the rate of discharge into a ditch system. The overflow from the pond also goes into a ditch system that runs basically south. During the latter portion of the irrigation season when the spring discharge is low, the pond is used to hold the spring flow until the pond is full and then it is discharged at a greater rate. The pond is considered a part of the delivery system rather than storage as the pond volume can be achieved by the decreed diversion rate in 24 hours.

The claimant indicated that the output of the springs varies widely throughout the year with the peak flow being dependent upon the irrigation of Nye's property.

The claim, A43-04082 represents the use of the spring flow that exceeds the decreed rate that is available prior to the watermaster being called on to deliver water to uses of an earlier priority date. As the water has always been available and used on the property since prior to the decree the recognized priority date is one day after the decree, or 10-19-1928.

Diversion rate analysis for springs

Recommended place of use	=	66.4 acres
66.4 acres @ 1 in/acre	=	1.33 cfs
43-00062 decreed rate	=	<u>0.30 cfs</u>
balance not decreed	=	1.03 cfs

The 1.03 cfs is the rate that can be recognized under 43-04082. This rate brings the acreage under the spring sources to a full inch to the acre for all acres under this system. Although the measured rate is approximately 10% less than 1 in/acre, I am recommending the 1.03 cfs as the spring flow varies and at times can exceed the 1 in/acre flow rate.

EAST SIDE SYSTEM

The appurtenant claim is A43-00063

SYSTEM ANALYSIS

Claim A43-00063 is used only on the east side of Cassia Creek which covers approximately 10 acres. This includes the lawn, garden and a horse pasture north of the home and lawn. This ground receives water from Cassia Creek through the Rice-Lessey ditch. A domestic well can also be used on the lawn. This right is used only on this ground as an independent system and is not used in conjunction with the other rights described as being appurtenant to the West Side system.
