RE: Basin 74 Recommendations Missing Tributary Information

Dear Diana:

It was discovered that a group of Basin 74 water rights were recommended in the Director's Report for Irrigation and Other Uses, Reporting Areas 23, IDWR Basin 74 without designation of tributary information. The water right source appeared on the recommendations; the tributary did not.

Upon review of this group of water rights, the department discovered all appear to be rights with a spring source. In most cases, water rights decreed in the Lemhi Adjudication did not list the tributary to spring sources. Many of the department's SRBA recommendations of Lemhi rights reflected the elements as decreed in the Lemhi—so the missing tributary information unwittingly carried over to some of the department's SRBA recommendations claimed with a source of spring(s). Attachment 1 shows the missing tributary information for these rights, currently undecreed in the SRBA.

In the review process, it was discovered that some spring recommendations with missing tributaries had moved forward to partial decree. Attachment 2 shows the missing tributary information for these decreed rights.

Water Rights Decreed in the Lemhi Adjudication without Tributaries
