RE: 77-4089 & 77-4219

Dear Mr. Knoblock:

This is how we came up with the amount of 2.60 cfs. for irrigation.

Water pressure range 45 – 100 psi. used 60 psi for average.

Use mostly 3/16" nozzle when water is available.

3/16 @ 60 psi = 7.75 gpm. Used 6.5 gpm. Average

120 total sprinklers x 6.5 = 780 gpm. x 50% conveyance loss = 390 gpm. = 1170 gpm.

1170 gpm. = 2.6 cfs.

Sincerely,

Kenneth Walters

77-4089

Field Exam Notes

Date of Exam: July 7, 2005

The Point of Diversion (POD) for **irrigation** is at GPS location **N45° 24' 41.4"** by **W116° 17' 31.3"** The diversion consists of a concrete dam and a submerged fourteen inch (14") PVC pipe (*Photo 1*) that goes through a bubbler about twenty feet (20') down stream from the POD (*Photo 2*). Water then continues through a buried PVC pipe to where it is divided into various other lines at the Place of Use (POU). On the day of the exam, all of the water was being diverted out of Shorts Creek at the POD but overflow from the bubbler was going back into the creek.

I also examined claim **77-4219** on the same day as this claim. Claim **77-4219** is rediverted out of Shorts Creek at the same POD and with the same diversion system as this claim. They also have the same irrigation POU (*Photos 5 & 6*).

Irrigation is done entirely through sprinklers which are pressurized by gravity. Measurements were taken at the sprinkler heads using a stopwatch and a five (5) gallon bucket. In irrigation lines 1 through 6, every third sprinkler was measured (Except for Line 2, Sprinkler 4 which was clogged. Sprinkler 5 was measured instead.) Every sprinkler was measured in lines 7 and 8. Those measurements are recorded below.

Measurements:

Line 1		Line 2		Line 3		Line 4		Line 5		Line 6		Line 7		Line 8	
#	Sec.	#	Sec.	#	Sec.	#	Sec.	#	Sec.	#	Sec.	#	Sec.	#	Sec.
1	97	1	88	1	145	1	123	1	112	1	77	1	65	1	58

JAN 17 2012

The times for the sprinklers in each line were totaled and averaged. The average of each line was then used to find the average gallons per minute (gpm) per sprinkler then multiplied by the number of sprinklers per line to give the gpm per line. The cubic feet per second (cfs) for each line was then calculated and totaled for the final sum.

Calculations:

Line	Total time Sec.	Ave time/ Sprinkler	Ave gpm/ Sprinkler	Sprinklers in Line	gpm	CFS
1	717	89.6250	3.3473	3.9 22.0000	86 73.6402	0.1641
2	436	87.2000	3.4404	13.0000	94 44.7248	0.0996

The details of the location of the irrigation POU is different from what is indicated on the claim. The POU that was found is recorded on the Data Entry Form and is also indicated on the Photo-Quad map. I do not know the lot numbers involved

I was unable to take the GPS location for the POD for the domestic use. However, it is located up stream from the irrigation POD and I believe it is located in the NW, SW, NW of Section 24 as indicated on the claim. The source is a spring located a short distance from and on the east side of Shorts Creek. The diversion system is a plastic collection tank (*Photo 3*). A buried pipe connects the collection tank to a concrete holding tank some distance down stream (*Photo 4*). From there, a buried pipe feeds the house. The water for irrigation and domestic uses are not intermingled.

The POU for the domestic use is the house located in **Twp 24N Rge 1E Sec.14 SE, SE**. I do not know the lot number involved.

Mr. Walters stated that this claim does not service livestock but the livestock drink out of stocktanks that are serviced by springs (*Photo 7*) and out of the streams.

Mr. Walters also stated that when the creeks dry up, he pumps water out of the Salmon River to irrigate his fields (#77-7309). Only 77-4219 and 77-7309 are known to have the same POU as this claim.

T24N R01E S14	NESE		

51 ACRES TOTAL

Right Numbers 77-4089 and 77-4219 are limited to the irrigation of a combined total of 51 acres in a single irrigation season.

OTHER PROVISIONS NECESSARY FOR DEFINITION OR ADMINISTRATION OF THIS WATER RIGHT:

This partial decree is subject to such general provisions necessary for the definition of the rights or for the efficient administration of the water rights as may be ultimately determined by the Court at a point in time no later than the entry of a final unified decree. Section 42-1412(6), Idaho Code.

The quantity of water decreed for this water right for domestic use and stockwater use is not a determination of historical beneficial use.

EXPLANATORY MATERIAL: BASIS OF CLAIM - Beneficial Use

RE: 77-4089

Dear Mr. Walters:

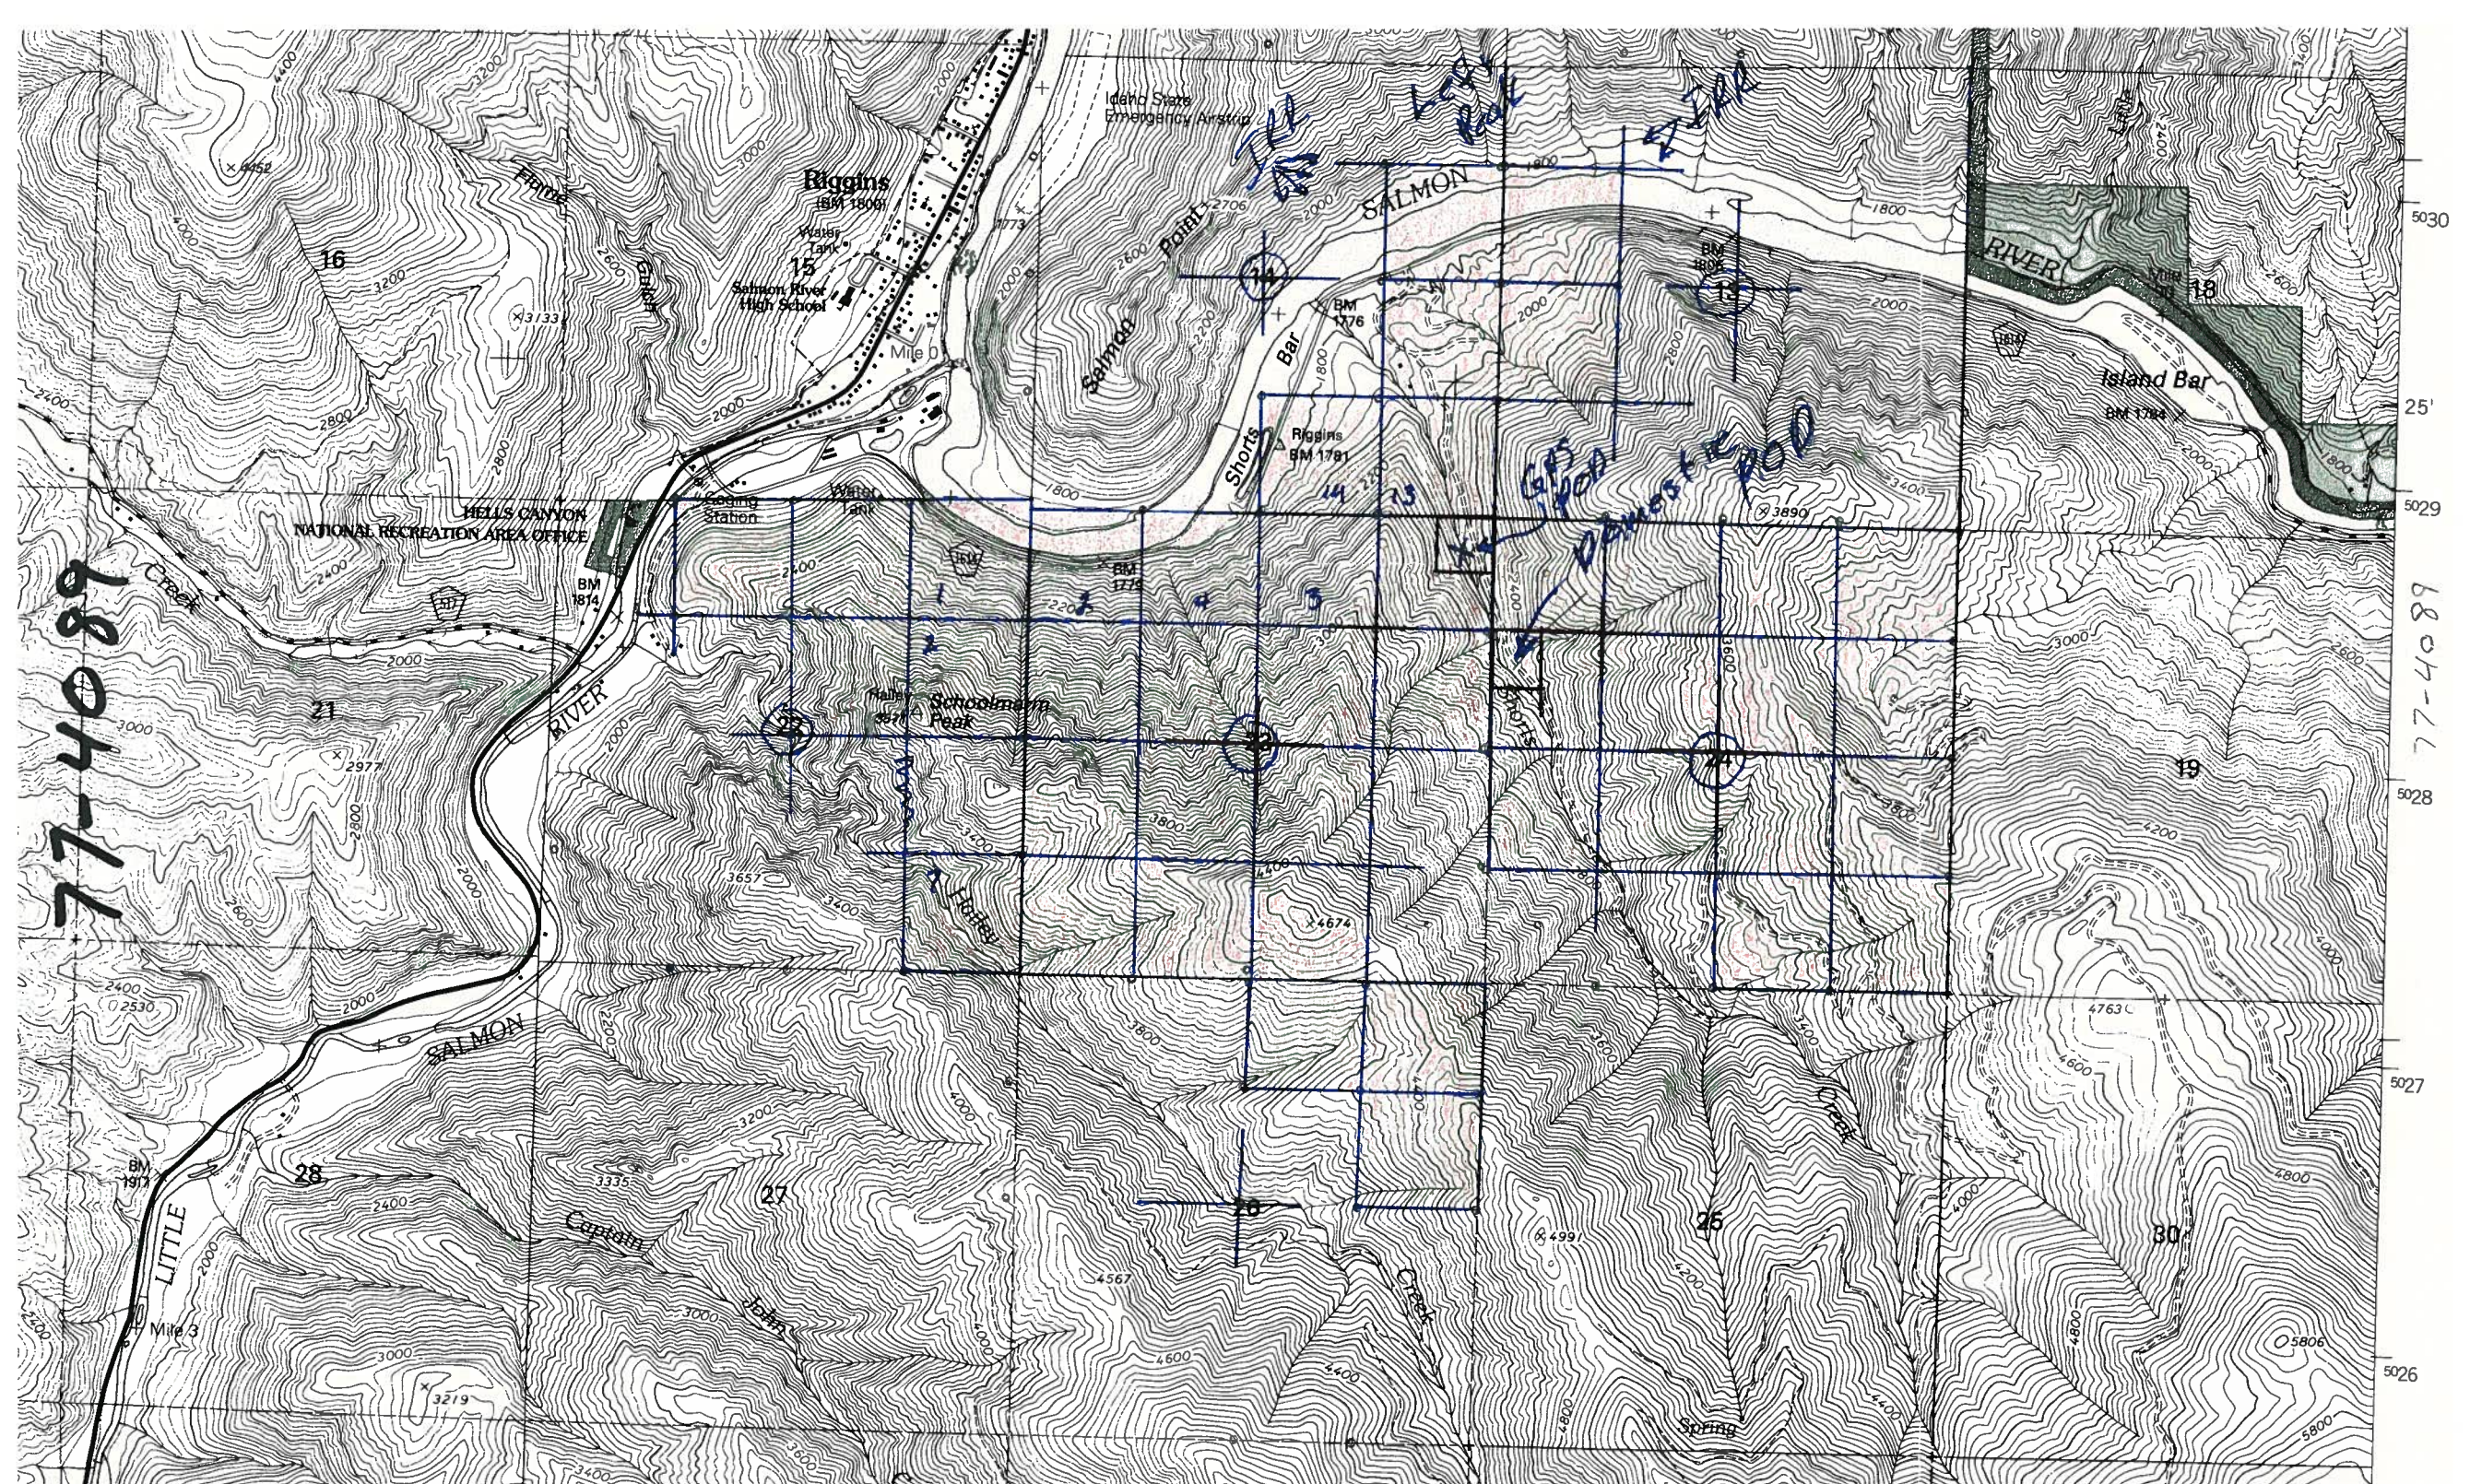

I have reviewed the examination report that was done by Jim Zimmerman. I would like to get an idea of how much water you are using for irrigation. I see that you are applying the water by sprinklers. How many sprinklers do you run and what is the nozzle size of the sprinkler? Do you know the approximate system pressure?

Sincerely,

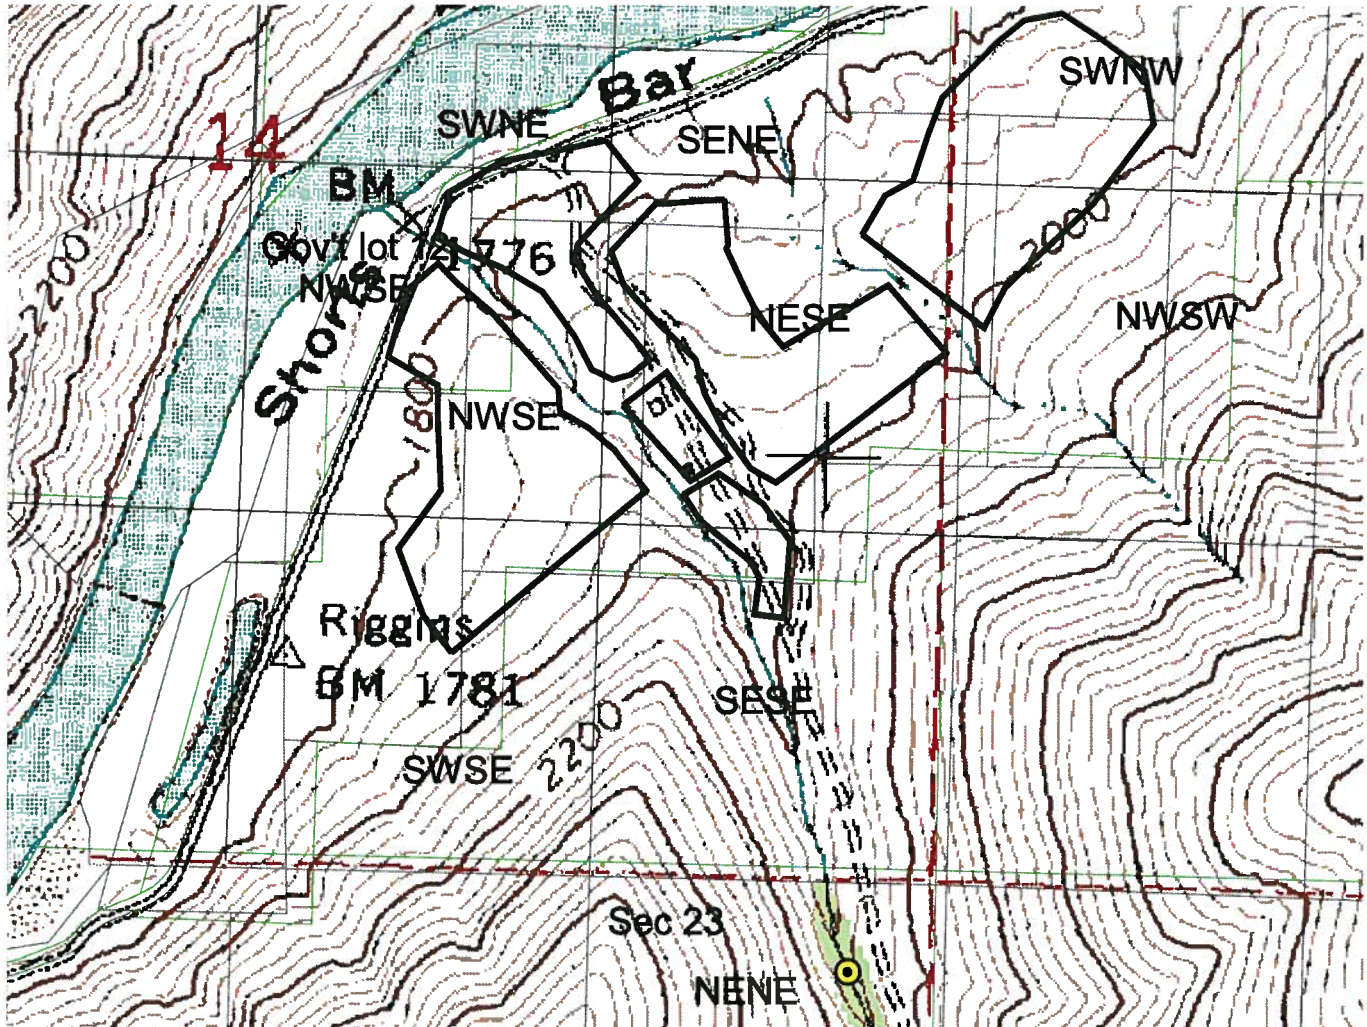

Kenneth Knoblock
Water Resources Agent
