P/U analysis: Spring water under 43-00474 can irrigate all of the Round place of use, whereas Cottonwood water under 43-00200 and 43-00205 enters the property South (down hill from the entry point for the spring system and can only irrigate a portion of the Round P/U. Therefore two polygons were created.

P/D analysis for 43-00474: The delivery ditch cuts across 4 spring channels at or near the spring sources. Therefore I am recommending 4 P/Ds and springs as the source. All 4 springs are within ~~850~~ 850± ft of each other.

P/D analysis for 43-00200 & 43-00205: The Source is Cottonwood and the main ditch is approximately 3100 ^{meters} from the P/D to the P/U. Other rights near the P/D shall this ditch (also owned by Ward)

SYSTEM DESCRIPTION: DESCRIBED BELOW (), SEE LICENSE FILE (), OR SEE ATTACHMENT ()

The Water is diverted from Cotton wood into an earth ditch the ditch runs approx 3200-meters or approx 10,500 ft. as determined using a line shape file in Arc View. The irrigation method is Wild flooding. As can be seen on the NAPP Photography, portions of the P/U are not well irrigated (if at all), however as these areas are difficult to measure and individually are relatively small regarding the overall P/U boundary, I have included that ground within the recommended P/U.

Claims diverting from Cottonwood Creek and sharing a common ditch

			43-00330
			43-00331

Four systems share the ditch diverting water from Cottonwood Creek at TWP 13S, RNG 24E, SEC 25 NESWNW.

Paul Ward owns three parcels with independently decreed rights and Golden Gardner owns one system. Conveyance losses were calculated for the ditch, based upon estimated ditch width and soil properties obtained from the "Soil Survey of Cassia County, Idaho, Eastern Part" issued August 1994. See the Excel Spreadsheet dated 3-17-2000 (heading = **CONVEYANCE LOSS – WORSTELL**). Total conveyance losses were calculated to be 2.50 cfs

A second Excel Spreadsheet, **Claims diverting from Cottonwood Creek and sharing a common ditch** dated 4-10-2000 is an interactive spreadsheet that calculates the proportional share for each system based upon the reach and irrigation requirements at 1 inch per acre for the found irrigated acres.

Starting at the point of diversion and going downstream, the four systems are identified as follows Paul Ward HES-104, Golden Gardner, Paul Ward P/U 2, and Paul Ward home.

Paul Ward HES-104

As the place of use for Paul Ward HES-104 begins near the point of diversion, no conveyance losses are assigned for this system (claim).

Gardner system

The Gardner system has a 0.74 cfs proportionate share of the conveyance losses calculated for reach 1. I found 74 irrigated acres, which equates to 1.48 cfs at 1 inch per acre. 43-00325 was decreed for 0.50 cfs, which is less than the irrigation requirement for the found acres. This right is recommended in its entirety. 43-00326 has a later priority date and was decreed for 2.70 cfs. I am recognizing 1.48 cfs (irrigation requirement) and 0.74 cfs (conveyance loss) for a total of 2.22 cfs. The balance of the decreed rate is determined to be forfeited.

The decreed place of use not being recommended is;

1. the ground north and up hill of the ditch,
2. the ground southeast of a ditch coming from Clyde Creek and going to the Nelson and Nye properties in section 31,

3. a small area northwest of that same ditch and
4. a 3.7 acre knob in the SWSW of sec 30.

The 1976 orthophotograph and the 1987-88 NAPP photography both show the same non-irrigated place of use.

Paul Ward P/U 2 and Home

The two systems listed above are joined together along the eastern border of the SWSW of sec 29 and they have historically been operated as a combined system. The ditch carrying water across the decreed place of use for P/U 2 to the Home place of use is also the supply ditch for irrigation of the P/U 2 place of use. A portion of 43-00200 has historically been used as conveyance loss for the use of water rights decreed to the 34 acres of the Home place of use west of Cassia Creek. 1.04 cfs is the irrigation requirement for P/U 2 and an additional 0.99 cfs is recognized for conveyance loss which totals to 2.03 cfs. The balance of the decreed rate ($2.40 - 2.03 = 0.37$ cfs) is available for conveyance loss under the combined usage with the Home place of use rights. The conveyance loss calculations found 0.78 cfs appurtenant to those rights. As the decree for 43-00200 was for 2.40 cfs, that is the maximum that can be recognized under that right.

The delivery system is an earth ditch approximately 12,898 feet long. For this analysis the delivery system is divided into 3 reaches based upon each irrigation system's diversion from the main ditch.

Paul Ward system HES-104 irrigates ground at the point of diversion and no conveyance losses are attributed to this system or right (43-00241).

Reach 1 goes from the P.D to Gardner's diversion system. Paul Ward's other two systems and Gardner's system share the conveyance losses for this reach.

Reach 2 goes from the Gardner diversion to Ward's P/U 2 diversion point. This reach is shared by the two remaining Ward systems.

Reach 3 goes from Ward's P/U 2 diversion to Ward's home diversion. All of this reach is for the home system.

The Ward home system from Cottonwood also overlaps with delivery system from Cassia Creek through the Rice-Lessey Ditch. This same system is operated in conjunction with the Ward P/U 2 system.

* Therefore the conveyance losses are treated as a combined system and are identified under 43-00200 for that portion that does not exceed the decreed rate for that right.
