REF: Cassia Creek water

January 25, 2001 I met with the renters (Harry and Jody) of Cedric Taylor's property. The property is located in Cassia County within three adjacent townships; 12 south, 26 east, section 36, 12 south, 27 east, section 31 and 13 south, 26 east, section 1, of the Boise Meridian. Property boundaries are outlined in green below. The overall slope of the land falls in a northeasterly direction. Water used to irrigate the property is both Cassia Creek and well water.

Conveying Cassia Creek: Cassia Creek is diverted from the NESENW of section 12, township 13 south, range 25 east of the Boise Meridian and flows north to the SWNWSE corner of the property located in section 1. From there, it can flow in three directions. One path is due east along the south property line to SENESE corner. Secondly to the pivot, and finally, north to the north corner of the SWNE quarter-quarter of section 1. At the north corner it goes due east one-quarter mile and joins with the water from the pivot. At that point it can go to the pond or north along the property line to section 36. On the north half of the SESE it flows due east to Cassia Creek where it jogs north to the quarter-quarter line and proceeds due east to the end of the property in section 31, township 12 south, range 27 east of the Boise Meridian.

System:

The system uses a combination of open ditches, handlines, flood irrigation, a ¼ mile pressurized pivot and 2 deep wells to irrigate. One deep well is located in the SW corner of the property in section 1. This deep well has a 30-hp pump serial number RSJ410312, and model number 5K4326XG2. The other deep well has a 75-hp pump and is located in the center of the pivot, serial number SWJ511134 and model number SK6267XC15A.

Once the surface waters enters the property it's conveyed through open ditches north or east. After a short distance due east the water can flow northeasterly to the center of the pivot and dumps into a concrete collection box, 3-feet by 3-feet and 8 feet deep. A pump at the collection box conveys the water to the quarter mile pivot. This 60-hp pump was rewound to 30-hp, serial number JNJ914354, model number 5K6254XM501A. The pressurized pivot was installed in 1980.

When Cassia Creek water is no longer available the deep well is pumped into the collection box and conveyed to the pivot. From the pivot the water flows in an open ditch north along the west line of the SENE quarter-quarter approximately 1200 feet and then goes into an underground pipe to the pond.

The pond is located in the SENENE corner of section 1. From the pond, the water can go north to irrigate the land in sections 36 and 31 or east to a mainline. A PTO conveys the water east to the mainline that runs to the end of the property. The handlines run north and south. They will pick up the NE corner of the pivot and the land east of the house.

Alternately, if the water goes north, a concrete ditch runs along the property line into another collection box. From there, a 10" mainline runs north to section 36 (SENE), then turns east with an 8" mainline, narrowing to 6" and then decreasing to a 4" mainline in the SESW of section 31. Again, the handlines run north and south through the land in sections 36 and 31.

From the collection box to the elbow in section 36, there are 25 risers. From the elbow east, there are approximately 85 risers to the edge of the property in section 31. Harry uses both 5/32 and 11/64-inch birds on the handlines. But most frequently uses 11/64th because of the trash in the water (tires, signs, dead animals, and just about anything else you can think of).

The 30 hp deep well in section 1 is also used for irrigation when the creek water is gone.

Pond: Harry and Jody had the pond engineered in 1996 to capture the water and convey it to the lands in sections 31 & 36. The pond is 10 feet deep with side slopes of 2:1. Harry thought the volume was 2.8 ac-ft of water. But stated that it could be filled in less than one day with creek water. Two-foot diameter concrete lined culvert going from Cassia Creek to the pond.

Crops: barley, alfalfa, corn, wheat, pastures and fall triticale (wheat and rye mix). Crops are rotated in all fields.

Stockwater: Watering of 60 hogs and 65 dairy cows is occurring from the domestic well. The domestic well also services two homes. See 43-10488 & 43-10489.
