43-00417A, 43-00417B AND 43-07080

BASIS FOR RECOMMENDATION

43-00368, 43-00370 and 43-00417 were decreed to the NW quarter of section 14. **43-00369** was decreed to the same tract as above and the E $\frac{1}{2}$ SW $\frac{1}{4}$ and E $\frac{1}{2}$ NW $\frac{1}{4}$ of Section 11. **43-07080** is a groundwater source right licensed partly on new ground and partly overlapping ground.

As a majority of the irrigated place of use has two or more overlapping rights for any specific area I am recommending all rights within a single permissible place of use. Each right, however, is being recognized with an acre limitation based upon the historical place of use covered specifically by that right.

43-00368 was decreed from Connor Creek. I found a delivery system from Connor Creek delivering water to the NW $\frac{1}{4}$ of sec 14. The delivery system cannot deliver water to the entire recommended place of use in that quarter and is therefore recommended with an acre limitation to those acres that have historically irrigated from Connor Creek. The Connor Creek system does not irrigate any ground in Section 11. The ditch flow from Connor Creek is predominately northeast until it reaches the northern boarder of Sec 14. At that point the ditch runs east. Gravity flow is south to southeast. I found 87 irrigated acres under the Connor Creek source.

43-00369 was decreed with Cassia Creek as the source. Cassia Creek cannot reach any portion of this property. I have interpreted this right to be a later in priority date right from all decreed sources and as a supplemental right to the existing rights and therefore have split it according to the sources recognized on the other claims. The "A" portion is recognized as complementary to 43-00370 and is recommended with the same sources, p/ds, and place of use. The "B" portion is recognized as complementary to 43-00368 and is recommended with the same source, p/d, and place of use.

The decree for **43-00370** lists Mahogany Springs, Summit and Blacksmith Creeks as the sources for this right. Blacksmith Creek enters the property in the North end of the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 11 (also the northern border of the recommended place of use). Stream flow from Blacksmith Creek is predominantly straight south. Although not clearly described in the decree, I am recognizing the irrigated acres in Section 11 and 14 as part of the decreed place of use for this right. Using the three sources, all of the irrigated place of use except for the southwest corner of the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of section 14 and that portion of the irrigated place of use east of Blacksmith Creek located in the E $\frac{1}{2}$ NW $\frac{1}{4}$ of section 14. Approximately 166 acres

The sources shown in the decree for **43-00417** are 'all springs' upon said land'. Although most of the springs are somewhat independent of each other, they are physically grouped in two geographical locations and therefore I have split this claim into two parts representing each spring grouping. Three springs are located in the S $\frac{1}{2}$ SW $\frac{1}{4}$ of section 11 and are part of the "A" split.(approximately 31 acres) The other springs are located in the W $\frac{1}{2}$ NW $\frac{1}{4}$ of section 14 and are part of the "B" split. (approximately 28 acres) The springs are part of the gravity system and the irrigated place of use from these springs is limited in area by the ground slope.

43-07080 is the last right appurtenant to a portion of the total place of use. This right is from groundwater and a licensing field examination was conducted in 1883. The adjudication recommendation is based upon this examination. This right is limited to the 109 licensed acres.

DIVERSION RATE LIMIT ANALYSIS

The permissible place of use found was 211 acres. The combined diversion rates for all rates would exceed one inch per acre. Therefore a rate limit is required. Conveyance losses were calculated for the Connor Creek diversion (43-00368 and 43-00369B) Conveyance losses were not calculated for any of the other ditches.

System claims	acre limitation	irr rate
43-00368 & 43-00369B	87 acres	1.74 cfs (when the two rights are combined) 0.23 cfs conveyance losses
43-00370 & 43-00369A	166 acres	3.32 cfs (when the two rights are combined)
43-00417A	31 acres	0.62 cfs
43-00417B	28 acres	0.56 cfs
43-007080	109 acres	<u>0.64 cfs</u>
	total	7.11 cfs

System limits = 211 ac @ 0.02 cfs/acre =	4.22 cfs
Total conveyance loss	<u>0.23 cfs</u>
Total system diversion rate limits	4.45 cfs

SPLIT ANALYSIS FOR A43-00369

This right was decreed as a blanket right for additional water for the entire place of use with the source listed as Cassia Creek. Cassia Creek is approximately one mile south of the southern edge of this property and water from Cassia Creek cannot physically reach this ground. Based upon historical practices in this area, as it relates to this claim and other rights similarly decreed, this right is recognized to be additional water from the same sources decreed as A 43-00368 (from Connor Creek) and A43-00370 (multiple sources) with earlier priority dates. As the base rights are being recommended for the actual place of use under its system, A43-00369 is being split to conform to each base system and diversion rate applicable to each system.

A43-00369A is recommended as overlapping with A43-00370 with the same sources and for the same place of use. I accept the originally decreed priority date as valid for this portion of the original right.

A43-00369B is recommended as overlapping with A43-00368 with the same source and for the same place of use. I accept the originally decreed priority date as valid for this portion of the original right.

**RECOMMENDATION ANALYSIS FOR DECREED RIGHT
43-00368 & A PORTION OF 43-00369**

A43-00368 and A43-00369B are recommended as Connor Creek diversions using the same P/D, delivery system and for the same P/U.
A43-00369B is for additional water with a later priority date.

DECREE INFORMATION:	DECREED RATE	DECREED SOURCE	DECREED RIGHT #
	1.00 CFS	CONNOR CREEK	43-00368
	3.34 CFS	CASSIA CREEK	43-00369

Measured = system capacity > 1.00 cfs
Found P/U = 87 acres

DIVERSION RATE RECOMMENDATION:

LEGAL LIMIT AT 1" PER ACRE = 87 acres * .02cfs/acre = 1.74 CFS
RECOMMENDATION FOR A43-00368: 1.00 CFS
difference 0.74 CFS

RECOMMENDATION FOR A43-00369B 0.74 CFS

The adjudication claims are being recommended with three separate sources with the diversion points identified as found. Each source irrigates some ground independent of the other sources but also overlaps on some acres within the recommended place of use. I am recommending these sources as one system under this claim.

DECREED RIGHT 43-00417

DECREED RATE	DECREED SOURCE
ALL	ALL SPRINGS

I found two significant spring systems and several other seep/spring areas. The springs are being recommended as two separate systems under parts A and B. The smaller spring seeps were not measured or specifically identified.

Analysis for A43-00417A (the north spring system consisting of three developed springs.

Measured = .47 cfs (includes a small flow from Sibley Creek but does not include the output of the two north springs within this system)

Found P/U = 31 acres

Analysis for A43-00417B (the south spring system consisting of three developed springs and two small ponds.

MEASURED = .66 cfs (the measurement includes all three springs except for a small seepage that was below the ditch. Both Mahogany Springs water and Connor Creek water was and had been diverted past this system and is not considered to have significantly impacted the springs discharge for measurement purposes.
