RE: AMENDMENTS TO SNAKE RIVER BASIN ADJUDICATION CLAIMS
A43-00369 AND A43-00370

Dear Noel

Enclosed are copies of the claims that relate to the Blacksmith Creek diversions and place of use that I found irrigated but not included in your original claim.

I have already added the quarter quarter and acres in the SWNE, SENW and increased the acres in the NESW AND NWSE as we discussed on the phone earlier today. The addition to the place of use represents an additional 26 acres for which variable fees are due.

Please review the claims and, if the changes are acceptable, sign them and have your signature notarized. Return those claims to this office along with a check for \$26.00 for the added acres.

Delivery within the Cassia Creek drainage has historically treated stockwater as not deliverable at the decreed priority date if that use was not specifically described in the decree. I also had the legal staff review the Jobe Adams decree specifically as the decree relates to stockwater. Based upon their analysis and the historical practice for the Cassia Creek drainage it was determined that the department cannot recognize stockwater as an added use to the original decreed right independent of the irrigation use.

If you have additional questions please contact me at this office.

Sincerely

Kelly K Christensen
Sr Water Resource Agent

NOTES:

See Attached narrative

ADD: Bascat - System - Analysis. 43C

The system is capable of irrigating 168 acres. This right is based upon Claimant's map. See P/4 page 109 note. decreed at 1.20 CFS. Using the Department guideline of .015 CFS/A as the lowest for beneficial use application for flood irrigation, this right is capable of irrigating 110 longer using KKC 3-3-00

$$.015 \text{ CFS/A} \times \frac{1.20 \text{ CFS}}{1 \text{ acre}} = 80 \text{ acres}$$

This right is therefore limited to the irrigation of 80 acres with the 168 acres when combined with A43-00369A all 168 acres can be irrigated at 1" per acre.

RECOMMENDATIONS:

TOTAL ACRES: 168 ☒ ASCS limited to 80 A. per acre

REVIEWED BY: KKC N/A () DATE: 7-14-95

NOTES: Stock water was not part of the disease case. Disease indicates that cases are specifically disease. Legally all members of the disease indicate that if the right description does not identify Stock Water specifically then it was not disease. We can't be recognized. Social as form in part of the case is damage is to NOT deliver water in the in system independent of coverage.

Recommend Priority Needs dept standards. P/You not given in the decree.

The system capacity exceeds the desired rate for this right even when combined with A43-00369A. Therefore the claimed rate is to be recommended. I measured 3 specific points on the system, (2 on Blk Sm C & 1 on Mahogany Sp.) The runoffs have already declined and therefore it was unable to establish the system capacity by direct measurement. Sibley Creek was nearly dry and therefore no measurement was made on that system. Also a 3rd P/D of Blk Sm. Creek was not in place at exam time and therefore was also not measured. ~~It~~ I estimated the measured decline at approx 50% of capacity with Sibley Creek and the Southern Blk Sm ~~Sp~~ P/D are being capable of delivering an equivalent amount as the measured system. Yellow sheet field notes 6-23-95 189 general notes

43-00368, 43-00369A, 43-00369B, 43-00370,

43-00417A, 43-00417B AND 43-07080

BASIS FOR RECOMMENDATION

43-00368, 43-00370 and 43-00417 were decreed to the NW quarter of section 14. **43-00369** was decreed to the same tract as above and the E $\frac{1}{2}$ SW $\frac{1}{4}$ and E $\frac{1}{2}$ NW $\frac{1}{4}$ of Section 11.

43-07080 is a groundwater source right licensed partly on new ground and partly overlapping ground.

As a majority of the irrigated place of use has two or more overlapping rights for any specific area I am recommending all rights within a single permissible place of use. Each right, however, is being recognized with an acre limitation based upon the historical place of use covered specifically by that right.

43-00368 was decreed from Connor Creek. I found a delivery system from Connor Creek delivering water to the NW $\frac{1}{4}$ of sec 14. The delivery system cannot deliver water to the entire recommended place of use in that quarter and is therefore recommended with an acre limitation to those acres that have historically irrigated from Connor Creek. The Connor Creek system does not irrigate any ground in Section 11. The ditch flow from Connor Creek is predominately northeast until it reaches the northern boarder of Sec 14. At that point the ditch runs east. Gravity flow is south to southeast. I found 87 irrigated acres under the Connor Creek source.

43-00369 was decreed with Cassia Creek as the source. Cassia Creek cannot reach any portion of this property. I have interpreted this right to be a later in priority date right from all decreed sources and as a supplemental right to the existing rights and therefore have split it according to the sources recognized on the other claims. The "A" portion is recognized as complementary to 43-00370 and is recommended with the same sources, p/ds, and place of use. The "B" portion is recognized as complementary to 43-00368 and is recommended with the same source, p/d, and place of use.

The decree for **43-00370** lists Mahogany Springs, Summit and Blacksmith Creeks as the sources for this right. Blacksmith Creek enters the property in the North end of the SW $\frac{1}{4}$ NE $\frac{1}{4}$ of Section 11 (also the northern border of the recommended place of use). Stream flow from Blacksmith Creek is predominantly straight south. Although not clearly described in the decree, I am recognizing the irrigated acres in Section 11 and 14 as part of the decreed place of use for this right. Using the three sources, all of the irrigated place of use except for the southwest corner of the SW $\frac{1}{4}$ NW $\frac{1}{4}$ of section 14 and that portion of the irrigated place of use east of Blacksmith Creek located in the E $\frac{1}{2}$ NW $\frac{1}{4}$ of section 14. Approximately 166 acres

The sources shown in the decree for **43-00417** are 'all springs' upon said land'. Although most of the springs are somewhat independent of each other, they are physically grouped in two geographical locations and therefore I have split this claim into two parts representing each spring grouping. Three springs are located in the S $\frac{1}{2}$ SW $\frac{1}{4}$ of section 11 and are part of the "A" split.(approximately 31 acres) The other springs are located in the W $\frac{1}{2}$ NW $\frac{1}{4}$ of section 14 and are part of the B" split. (approximately 28 acres) The springs are part of the gravity system and the irrigated place of use from these springs is limited in area by the ground slope.

43-07080 is the last right appurtenant to a portion of the total place of use. This right is from groundwater and a licensing field examination was conducted in 1883. The adjudication recommendation is based upon this examination. This right is limited to the 109 licensed acres.

DIVERSION RATE LIMIT ANALYSIS

The permissible place of use found was 211 acres. The combined diversion rates for all rates would exceed one inch per acre. Therefore a rate limit is required. Conveyance losses were calculated for the Connor Creek diversion (43-00368 and 43-00369B) Conveyance losses were not calculated for any of the other ditches.

System claims	acre limitation	irr rate
43-00368 & 43-00369B	87 acres	1.74 cfs (when the two rights are combined) 0.23 cfs conveyance losses
43-00370 & 43-00369A	166 acres	3.32 cfs (when the two rights are combined)
43-00417A	31 acres	0.62 cfs
43-00417B	28 acres	0.56 cfs
43-007080	109 acres	<u>0.64 cfs</u>
	total	7.11 cfs

System limits = 211 ac @ 0.02 cfs/acre =	4.22 cfs
Total conveyance loss	<u>0.23 cfs</u>
Total system diversion rate limits	4.45 cfs

**BOWCUT SYSTEM ANALYSIS
FOR FARMSTEAD IN Tns 13S; Rng 25E; Secs 11 & 14 B.M.**

SPLIT ANALYSIS FOR A43-00369

This right was decreed as a blanket right for additional water for the entire place of use with the source listed as Cassia Creek. Cassia Creek is approximately one mile south of the southern edge of this property and water from Cassia Creek cannot physically reach this ground. Based upon historical practices in this area, as it relates to this claim and other rights similarly decreed, this right is recognized to be additional water from the same sources decreed as A 43-00368 (from Connor Creek) and A43-00370 (multiple sources) with earlier priority dates. As the base rights are being recommended for the actual place of use under its system, A43-00369 is being split to conform to each base system and diversion rate applicable to each system.

A43-00369A is recommended as overlapping with A43-00370 with the same sources and for the same place of use. I accept the originally decreed priority date as valid for this portion of the original right.

A43-00369B is recommended as overlapping with A43-00368 with the same source and for the same place of use. I accept the originally decreed priority date as valid for this portion of the original right.

**RECOMMENDATION ANALYSIS FOR DECREED RIGHT
43-00368 & A PORTION OF 43-00369**

A43-00368 and A43-00369B are recommended as Connor Creek diversions using the same P/D, delivery system and for the same P/U.
A43-00369B is for additional water with a later priority date.

DECREE INFORMATION:	DECREED RATE	DECREED SOURCE	DECREED RIGHT #
	1.00 CFS	CONNOR CREEK	43-00368
	3.34 CFS	CASSIA CREEK	43-00369

Measured = system capacity > 1.00 cfs
Found P/U = 87 acres

DIVERSION RATE RECOMMENDATION:

LEGAL LIMIT AT 1" PER ACRE = 87 acres * .02cfs/acre = 1.74 CFS
RECOMMENDATION FOR A43-00368: 1.00 CFS
difference 0.74 CFS

RECOMMENDATION FOR A43-00369B 0.74 CFS

PLACE OF USE ANALYSIS

Water is delivered to the P/U through an earth ditch that forms the northwest and north borders of the P/U. The meadows are flood irrigated through various contour ditches and is at times co-mingled with water from the A43-00370 system and/or the A43-00417B system. The eastern boundary is formed by a natural channel that lays west of Blacksmith Creek and roughly parallels that channel. The southern boundary is the property line. Excess irrigation water from this system can irrigate a portion of the ground south of this system. A ditch running straight south from the point where the Connor Creek ditch enters the property and following the fence line forms the western border of the P/U.

RECOMMENDATION ANALYSIS FOR DECREED RIGHT 43-00370 & A PORTION OF 43-00369

A43-00370 and A43-00369A are recommended as multiple source diversions using the same P/Ds, delivery systems and for the same P/U. A43-00369A is for additional water with a later priority date.

DECREED RIGHT 43-00370

<u>DECREED RATE</u>	<u>DECREED SOURCE</u>
1.20 CFS	MAHOGANY SPRINGS: not identified by the USGS on the quad maps but there is a spring system locally known as Mahogany springs BLACKSMITH CREEK: identified as such by the USGS on the quad map SUMMIT CREEK: USGS identifies a Summit Creek just north of this system but in basin 45. The next significant stream source used in this system is Sibley Creek as identified by the USGS and as such, is the recommended source under this decreed claim.

DECREED RIGHT 43-00369

3.34 CFS CASSIA CREEK (Recommended sources as listed above)
Measured = 1.09 cfs (the system was not at capacity)
Found P/U = 166 acres

POINT OF DIVERSION ANALYSIS

43-00370 was decreed as having three sources but without listing any diversion points. 43-00369 was decreed with Cassia Creek as the source. Cassia Creek has never and cannot be physically delivered to the found place of use without a pumping plant. In reviewing the Jobe-Adams decree, it is noted that many times tributaries to Cassia Creek are referred to as Cassia Creek. Therefore 43-00369 is being recommended as a split right with the sources agreeing with the overlapping right sources.

The adjudication claims are being recommended with three separate sources with the diversion points identified as found. Each source irrigates some ground independent of the other sources but also overlaps on some acres within the recommended place of use. I am recommending these sources as one system under this claim.

CONNOR CR. DITCH

CLAIM # A43-00 370
DATE PHOTOS TAKEN; 6-29-95
PICTURE # 1

This photo shows the eastern most spring of the Mahogany Springs System. You are looking east across the ditch and spring water. The spring is coming in from the left and the ditch runs along the right. I measured 0.50 cfs at this point which includes the output of all three springs.

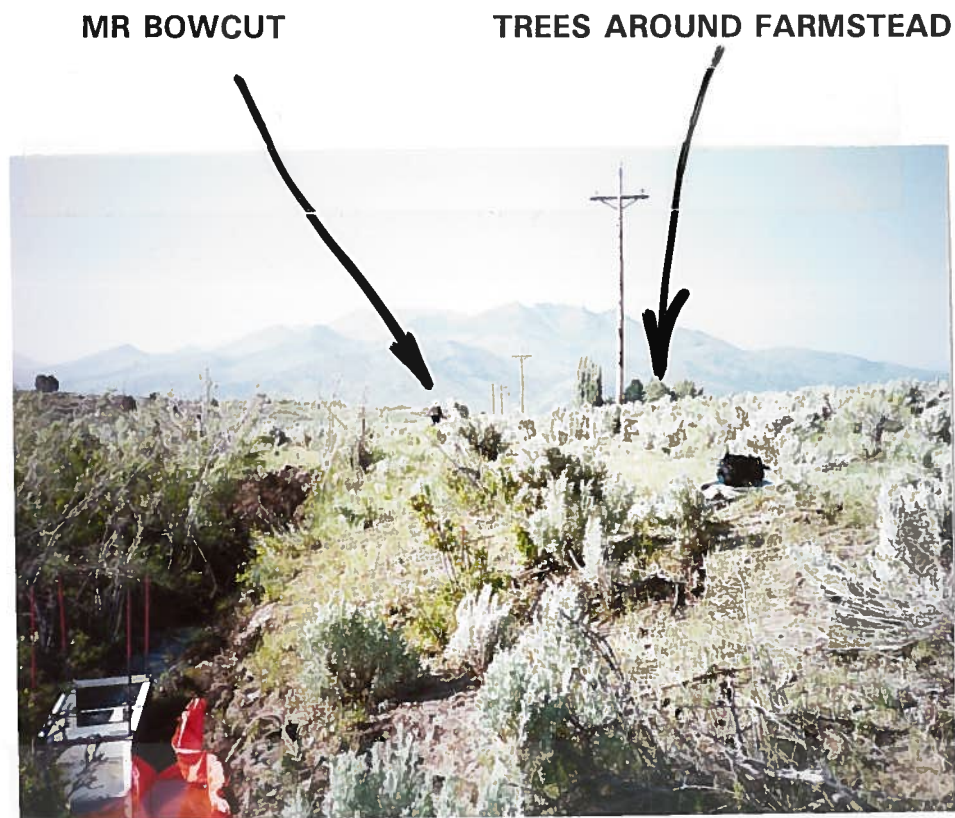

CLAIM # A43-00370

DATE PHOTOS TAKEN; 6-29-95

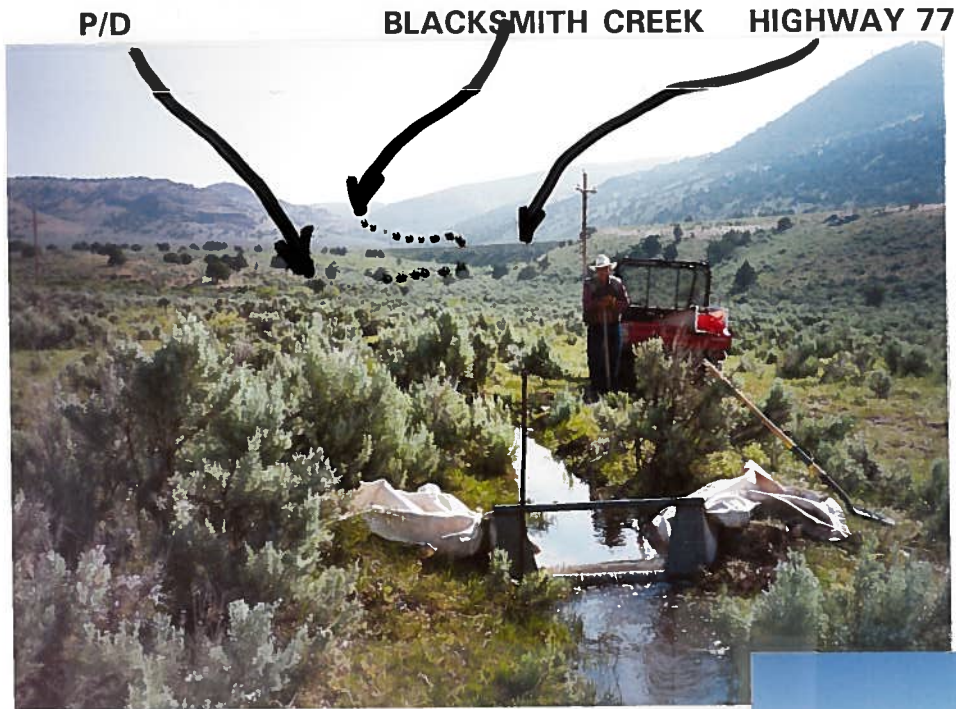

PICTURE # 2

This photo shows the measurement site on Blacksmith Creek for the second from the north point of diversion. You are looking south in this photo. This location is approximately 30 feet south of the point of diversion. The normal stream channel lays to the left of the ditch. The entire stream flow was being diverted at the north point of diversion and this water represents various spring/seeps between the north point of diversion and this point of diversion. As the spring water collects in Blacksmith Creek before diversion, the water is recognized as Blacksmith Creek water and not spring water. The ditch swings southwest just past Mr Bowcut.

CLAIM # A43-00370
DATE PHOTOS TAKEN; 6-29-95
PICTURE # 3

This photo is looking northeast toward the P/D and the Head of Blacksmith Creek. The ground to the right of the ditch is sometimes irrigated in the spring whenever water is available to improve range grass production for grazing.

PICTURE # 4 →

This photo is looking south toward the farmstead and shows the measurement location and the irrigated ground east of the ditch.

FARMSTEAD

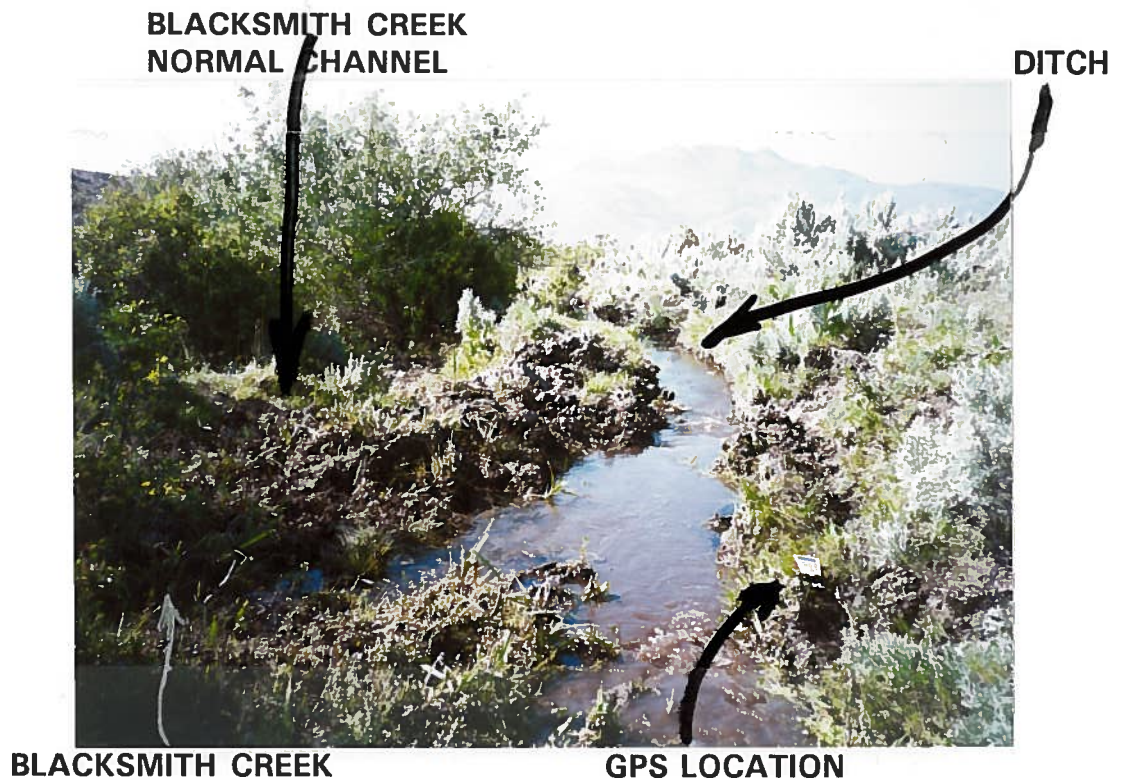

CLAIM # A43-00370

DATE PHOTOS TAKEN; 6-29-95

PICTURE # 5

This photo is looking south across Blacksmith Creek and the point where an unnamed stream joins Blacksmith Creek. That stream roughly parallels Highway 77 from near Connor Summit to this point. The normal channel swings through and to the left of the brush on the left. A GPS reading was taken at this point but no site tag was placed at this location as there was no permanent structure to attach the tag to. This is the northern most point of diversion of three from Blacksmith Creek.

CLAIM # A43-00370
DATE PHOTOS TAKEN; 06-23-95
PICTURE SET # 6

This photo set is looking north northeast on the right to north northwest on the left. The channel on the left is the Blacksmith Creek natural channel. The ditch in the center of the photo comes from the southern most P/D on Blacksmith Creek. All of the P/U in the foreground is irrigated from Blacksmith Creek only. On the far left the darker green and redish ground can be irrigated from Connor Creek, Mahogany Creek and/or the southern spring system (A43-00417B).

CLAIM # A43-00370
DATE PHOTOS TAKEN; 06-23-95
PICTURE SET # 8

This photo set is looking west on the left to northwest on the right. The photo location is on the south property border between Bowcut and Wickel which is close to the W1/16th corner of sec 14. The ground to the right of the drainage channel is irrigated from Blacksmith Creek and the ground to the left can be irrigated from Connor Creek, the South spring system (A43-00417B), and/or Mahogany Springs. This channel forms a natural boundary between the east and west sides of the irrigated ground. This channel extends north northeast and borders the farmstead on the west.

CLAIM # A43-00370
DATE PHOTOS TAKEN; 06-23-95
PICTURE SET # 9

This photo set is looking northwest on the left to north on the right and shows the Sibley Creek channel entering the southern Spring (locally called Sibley Spring) channel. The spring and Sibley Creek water can be diverted to the northeast through a ditch shown in the foreground on the right. This spring also is developed with a 2" buried line running southeast toward the section line.

CLAIM # A43-00370
DATE PHOTOS TAKEN; 6-23-95
PICTURE # 11

This photo shows the spring development for the western most spring of the Mahogany Springs system. See also photo set 10. This structure is approximately 100 north of photo set 10. You are looking north in this photo.

CLAIM # A43-00370
DATE PHOTOS TAKEN; 06-23-95
PICTURE SET # 12

This photo set shows the middle spring diversion point of the Mahogany Springs system. You are looking west northwest on the left to west on the right. The marked spring seep is the area that is visible from long distances but this seep area was not contributing a significant amount of water to the system on this date and is not identified as a point of diversion.
