Dear Mr. and Mrs. Moss:

Pursuant to notification that you presently own the property in which the above referenced Adjudication Claims are appurtenant, the Department has changed the records of the current owner as you requested. Please find enclosed copies of the computer records of the claims noting the changes in claimant. As I mentioned when you were in the office last week, these claims do not match the water rights from which they were derived and will be corrected during the adjudication process.

Please review the records and if you have any corrections or questions, please feel free to call this office.

Sincerely,

A handwritten signature in cursive script that reads "Jeanie".

RE: CHANGE OF WATER RIGHT OWNERSHIP

Dear Mr. and Mrs. Moss:

In attempting to process the Notice of Change of Water Right Ownership submitted to the Department of Water Resources by Land Title and Escrow, Inc. of Burley on your behalf, I have been unable to locate the water right number you wish to have put in your name. Consequently, I am unable to complete the change at this time.

I have researched all water right records for Township 11S, Range 27E, Sections 20 and 21 and have not found a water right in the name of Layton and Betty Ott. It appears the Ott's, and possibly other prior owners, did not notify IDWR of the ownership change when they purchased the property.

I am returning your original Notice of Change of Water Right Ownership. Please complete the blue highlighted items and return it to me at the above address along with all other proof showing the chain of ownership changes (i.e. warranty deeds) proving ownership has passed from all previous owners to you.

Sincerely,

Trish Fawcett
Technical Records Specialist

POWER OF ATTORNEY

RAFT RIVER RANCHES, INC., hereby appoints and by these presents does make, constitute and appoint SHIRL L. CHAPMAN, attorney for RAFT RIVER RANCHES, INC., to sign and execute for said corporation that certain claim to be filed in Case No. 13770-12-83 in the District Court of the Fifth Judicial District of the State of Idaho, in and for the County of Cassia.

DATED this 17th day of Dec, 1985.

RAFT RIVER RANCHES, INC.

By:

Leo A. Jardine
LEO A. JARDINE
Its: Secretary

STATE OF UTAH)
 : ss.
COUNTY OF SALT LAKE)

On this 17th day of Dec, 1985, personally appeared before me LEO A. JARDINE who, being by me duly sworn, did say that he is the Secretary of RAFT RIVER RANCHES, INC., an Idaho corporation, and that the foregoing Power of Attorney was signed on behalf of said corporation by authority of its Bylaws or a resolution of its Board of Directors, and said LEO A. JARDINE acknowledged to me that said corporation executed the same.

MEMORANDUM

To: FILES A43-02574A, A43-02574C, A43-02576A, A43-02576C
From: HELEN HARRINGTON-THORNTON
Date: February 2, 1993
Subject: BACKGROUND TO FILINGS

=====

The original claims (the C portions of each) were filed in the Fosha vs. Dunn adjudication. These claims were for the portions of the original rights which were within the Fosha adjudication area (Sections 19, 20, 21, 28, 29, 30, 31, 32, 33, T 11S, R 27E).

When the Snake River Basin Adjudication came along, additional claims were filed for the lands not included within the above listed sections (the A portions).

Subsequently, the Fosha vs. Dunn adjudication was consolidated in the SRBA.

Raft River Ranches has indeed claimed the entire rights 43-02574A and 43-02576A, however it has been accomplished through two claims^{each}. I have numbered the second adjudication claims as 'A' suffixes in order to allow for recombining the claims in the final recommendation as the total A portion.

Review of the claims filed in the Fosha vs. Dunn adjudication was accomplished in the mid-1980s and the C portion files of each claim will contain the materials from that review. No review has yet been done on the A portions.

2/8/93 - corrected 'A' record to match original claim - created 'E' record to carry over tentative recommendation

Change of Address *pp. I am still checking on these*

Dear Water Right Holders: *Rights Not sure if all correct*

IDWR has been notified the address presently in our records is incorrect. Although we have reached you at the address above, we need your written confirmation this is your correct mailing address before we can change our records. Future notices related to your water right can be sent only to the address on your water right or as otherwise changed by you.

Please sign your name at the bottom of this letter and return it to this office. Make corrections to your name and address if necessary and list any other water rights you may have before returning this letter by February 20, 2001. Thank you for your help.

If your mail delivery address changes in any form, please contact us in writing so we can update our records.

If there has been a change in ownership of the property connected with the water rights referenced above, please call this office toll-free at 1-800/451-4129 to obtain a form to make this required change to the water right record.

Sincerely,

Sally Sherman

Prepared by Jeanie Robertson

Dan Moss claims well #6 (SESW Sec. 22)
which was measured & licensed for 369" (7.38)

R43-04013A	0.58 cfs
R43-04014C	0.98 cfs
R43-04014E	1.32 cfs
R43-02574C	8.03 cfs
	<u>10.91 cfs</u>

Bob Moss claims well #6 also

R43-04014A	0.72 cfs
R43-04014B	0.98 cfs
R43-02574E	2.0 cfs
R43-02576E	1.33 cfs
	<u>5.03 cfs</u>

for 5.36 cfs
Dan Moss also claims 4 wells in Sect. 21, (although well in SESE should be Section 20.)

#9 SWSE Sec. 21 is licensed for 5.18 cfs

#11 SESE Sec. 20 is licensed for 6.02 cfs

* 2 additional wells were added in approved transfer 2236 from 10/25/78 to pick up declining production of other wells

Total recom. div. rate = 21.3 cfs

Total measurement of system = 18.58

- 2.72 cfs probably picked up by other 2 undoc. wells

??? are systems tied together ???

MEMORANDUM

To: FILES

From: Helen Harrington-Thornton

Date: January 22, 1993

Subject: Claims Originally Filed in Fosha vs. Dunn Adjudication
=====

This claim was originally filed in the Fosha vs. Dunn Adjudication which has subsequently been consolidated with the SRBA. Claimants in Fosha vs. Dunn were not required to file a new claim in the SRBA. In some cases, however, claimants may have filed an amended claim in the SRBA.

The original claims consist of both an original white copy with the original signature and a yellow carbon. Both of these form must be retained in the IDWR files. The original form included a green carbon which is the claimant's copy. As stated above, there may also be an amended claim.

The review of this claim initially occurred in 1985/1986 by IDWR Adjudication staff. The review process included field examination by IDWR Southern Region Staff (Loren Holmes and Allen Merritt) in 1985 and additional review by IDWR State Office staff (Don Shaff, John Noyes and Forrest Luthy). The claim review documents include:

- // ~~Final~~ ^{Not final} recommendation - shown on zeroxed copy of claim, with recommendation shown in RED
- // Adjudication Claim Analysis Sheet (consider this a replacement for the currently used Claims Verification Report (CVR)
- // Map
- // Correspondence, Memos to File, etc.
- // Zerox of original receipts (this is because the original receipt was hand written, prior to the computer receipting). However, in most instances, a voided receipt has been created in the computer in order to update the record to the Host Master.

I have reviewed the claim at this time in order to evaluate the completeness of the original review and have it meet current standards. I have created an R record and verified the recommendation when possible. Generally, the review is based on information available at the time of the original review in 1985/86. Unless there is a discrepancy, additional information of more recent origin has not been added to the review process.

C-1c Description of Diverting Works

It is proposed to change the points of diversion under license #G-31818 by adding one additional well to the existing points of diversion that have been covered under the license and subsequent transfer #1598. All of the wells are now existing wells and are utilized to irrigate the lands as described under the original right and subsequent approved transfer #1598.

MEMORANDUM

TO: File 43-2574C

FROM: Don Shaff 
Water Rights Supervisor

DATE: June 18, 1986

RE: Review Analysis

This claim was filed with 14 points of diversion described lying both inside and outside the investigative area of concern here. The place of use claim was limited to that area within the investigative area. The findings of the department are in agreement with the claimant with respect to the place of use.

The claimed points of diversion presented another problem. The points lying outside the investigative area are not within the scope of the authorized order. As a result, the single point of diversion within the investigative area is in the SE1/4SE1/4SE1/4, Section 20.

The amount of water recommended for this water right is limited by the diversion capacity of that right which is 6.02 cfs. The period of use was expanded from that license consistent with the policy of the department with respect to irrigation seasons and frost-free periods.

MICROFILMED

MAR 19 1993

shown by the attached well log. The well is equipped with a Layne-Bowler deep well turbine pump with four stage type T.H.C. 14 inch bowls. The pump is driven by a 450 H.P. Hall Scott natural gas engine. The water is discharged through 10 feet of 12 inch I.D. pipe into a concrete box 9 feet x 14 feet x 32 inches deep having two 27 inch openings with flash boards on the west and north sides thereof, through either or both of which the water is discharged into two separate earthen ditches and is used for the purposes described herein.

SESE, 320 T/H/S R27E

Well No. 11 is a 20 inch well 700 feet deep and cased with 20 inch O.D. pipe from 0 to 318 feet and 16 inch O.D. pipe from 308 feet to 555 feet as shown by the attached well log. The well is equipped with a Layne-Bowler deep well turbine pump with three stage type T.H.C. 14 inch bowls. The well pump is driven by a 353 Caterpillar natural gas engine developing 250 H.P. and having a maximum 1300 R.P.M. The water pumped from the well is discharged into a 12 inch O.D. pipe and conveyed thereby 34 feet through a right angle el to a Gould split case booster pump, model 3405. The booster pump is driven by a 145 H.P. natural gas Waukesha engine, model 145GZ, having a maximum 2000 R.P.M. From the booster pump the water is discharged through 10 feet of 10 inch I.D. pipe (with a 6 feet metering section equipped with vanes) and then into the main 12 inch I.D. sprinkler system main pipeline. A pressure gauge is installed in the 12 inch I.D. pipe between the well pump and the booster pump and a pressure gauge is installed in the metering section on the discharge side of the booster pump immediately below the meter. From the booster pump the water is conveyed west 500 feet through 12 inch 12 gauge steel pipe wrapped No. 8, thence north 2200 feet through 12 inch .064 aluminum main line pipe, thence through 1800 feet of 10 inch .064 aluminum main line pipe, thence through 600 feet of 8 inch .064 aluminum main line pipe, thence through 600 feet of 6 inch .058 aluminum main line pipe. The main line aluminum pipe has 104 valves spaced 50 feet apart. From the main line pipe the water is discharged into eighteen 4 inch Ireco laterals each being 1,960 feet long and consisting of 49 sections each 40 feet long with a riser in the middle of each section equipped with rain-bird heads with 9/64ths inch nozzles. The water is discharged by means of said sprinkler system and is used for the irrigation of the lands herein described.

Well No. 12 is a 20 inch well 712 feet deep cased with 20 inch O.D. pipe to a depth of 706 feet as shown by the attached well log. The well is equipped with a Layne-Bowler deep well turbine pump with three stage type R.K.M.C. 18 inch bowls. The pump is driven by 250 H.P. electric motor, U. S. make, 440 volts, three phase, 1800 R.P.M. The water is discharged through 10 feet of 12 1/8 inch I.D. pipe into a concrete box 12 feet x 8 feet x 30 inches deep having three 27 inch openings with flash boards on the north, west and south thereof, through any one or any combination thereof the water is discharged into three separate earthen ditches and is used for the purposes described herein.

ENGINEER'S CERTIFICATE

I, Joseph Novak, a Civil Engineer and Land Surveyor registered in and licensed by the State of Utah, do hereby certify that:

1. On the 17th day of September, 1968 I personally measured the waters discharged by Wells Nos. 10 and 12 described in this Proof and that on the 19th day of September, 1968 I personally measured the waters discharged by Wells Nos. 9 and 11 described in this Proof.
2. The equipment used consisted of a new Hershey-Sparling heavy duty 10 inch meter and a Swiss made Security Stop Watch calibrated to one-tenth of a second. Wells Nos. 10 and 12 were measured with the meter installed in a portable 6 feet section of 10 inch I.D. light weight pipe equipped with three Hershey-Sparling standard metal vanes mounted in the interior thereof parallel to the length of the pipe at angles of 120 degrees with the trailing edge of the vanes situated $5\frac{1}{4}$ inches ahead of the center of the meter. The meter was mounted with its center 50 inches below the intake end and 22 inches above the discharge end. The meter was calibrated in miner's inch hours with a totalizing dial and a sweep hand dial divided into tenths of one revolution.
3. Wells Nos. 9 and 11 were measured with the same meter described above, which was installed in a 6 feet permanent section of 10 inch I.D. standard pipe with standard Hershey-Sparling vanes mounted inside the pipe, with the positioning of the meter and vanes as specified above. The intake end of the metering section of pipe was connected by Dresser couplings to the discharge pipe from the Gould booster pump at a point approximately 10 feet from the discharge side of the booster pump. A pressure vacuum gauge was installed 16 inches beyond the center of the meter and a pressure vacuum gauge was installed in the discharge pipe between the well pump and the booster pump at a point approximately 3 feet above the intake side of the booster pump. The same type metering system and pressure vacuum gauges are installed in the discharge pipes of both Wells Nos. 9 and 11.
4. Each measurement of the discharges of Wells Nos. 10 and 12 was made by connecting the portable metering section of 10 inch I.D. pipe to the ends of the respective discharge pipes with either Dresser couplings or plastic connectors, with the discharge end of said portable metering section slightly elevated to assure a full pipe of water through the meter section.
5. A minimum of three measurements was made of the discharge of each well after sufficient pumping to insure stabilization of the discharge thereof. Each measurement was based upon the accurate timing of a minimum of 10 complete revolutions (10 miner's inch hours).
6. At the time of the measurement of Well No. 9 only ten out of the eighteen 4 inch Ireco laterals were in operation since the remaining laterals watered lands planted to grains from which the sprinkler lines had been removed and the grains were then being

In view thereof the ten 4 inch laterals each comprising 49 sections of 40 feet lengths with one riser in the middle of each section and each riser equipped with a rainbird head with 9/64ths inch nozzles were placed in operation. To simulate the inclusion of the eight additional laterals one outlet valve was slightly opened to permit the discharge of less than 50 miner's inches. The well was pumped sufficiently to insure stabilization and then a series of measurements were made by maintaining the pressure in the discharge pipe immediately below the meter at pressures varying from 20 p.s.i. to 60 p.s.i. while maintaining the pressure in the line between the booster pump and the well pump at approximately 1 p.s.i. consistent with standard operations. Three of the measurements were selected with discharge pressures between 25 p.s.i. and 40 p.s.i. being conservative normal operating pressures and based upon the accurate timing of 10 complete revolutions (10 miner's inch hours) each. The discharge was determined by multiplying the number of revolutions by 60 and dividing the product by the average time thereof to one-tenth of a second and based thereon the measured discharge of Well No. 9 was 259 miner's inches. During the measurements the Caterpillar engine was operated at 1100 RPM (150 RPM below its rated capacity). An additional test was made by increasing the speed of the Waukesha engine connected to the booster pump sufficient to create a vacuum measured at minus 5 p.s.i. in the line between the well pump and booster pump to demonstrate that the booster pump had more than sufficient capacity to discharge into the pressure sprinkler system all of the water produced by the well pump. The overall system was designed to produce and discharge through the pressure sprinkler system 300 miner's inches of water while operating at 40 p.s.i.

7. At the time of the measurements of Well No. 11 the sprinkler system laterals had been removed from the fields which were planted to grain and which were then being harvested. To have placed the laterals and sprinklers in the grain fields would have required the expenditure of approximately \$1,000.00 estimated by the owner in labor costs plus loss of the crops then being harvested. In view thereof efforts were made to simulate the sprinkler system in operation by opening the main 12 inch discharge pipeline approximately 500 feet below the meter and installing a temporary headgate in the pipeline to restrict the flow of water being discharged and thereby maintain the operating pressures in the 12 inch discharge pipeline below the meter. After the well had been pumped sufficiently to insure stability the temporary headgate was partially closed and discharge pressures were built to 15 p.s.i. below the meter. A series of measurements were then made with the discharge pressures maintained at between 10 p.s.i. and 15 p.s.i. while maintaining the pressure in the line between the booster pump and the well pump at approximately 1 p.s.i. At the completion thereof an attempt was made to increase the discharge pressure to between 25 p.s.i. and 40 p.s.i. by further closing the temporary headgate. However, to do so the well pump had to be shut down. After adjusting the temporary headgate the well pump was again turned on but was brought up too rapidly, causing a wave of back pressure, with the end result of what is believed to be a sheared key in the connection of the bowls to the pump column. In view thereof no further measurements can be made until the necessary repairs are completed, which will require pulling the well pump. Three of the foregoing measurements made with discharge pressures between 10 p.s.i. and 15 p.s.i. were selected and based upon the accurate timing of 10 complete revolutions each (10 miner's inch hours) the discharge was determined by multi-

During the measurements the Caterpillar engine was operating at 1300 RPM and the Waukesha engine was operating at 1250 RPM, being well below its rated maximum. During the testing the speed of the Waukesha engine was increased above 1200 RPM sufficient to create a vacuum measured at minus 5 p.s.i. in the line between the well pump and booster pump to demonstrate that the booster pump had more than sufficient capacity to discharge into the pressure sprinkler system all of the water delivered to it by the well pump. The overall system was designed to produce and discharge through the pressure sprinkler system 300 miner's inches of water while operating at 40 p.s.i.

8. A minimum of three measurements was made of the discharge of each well after sufficient pumping to insure stabilization of the discharge thereof. Each measurement was based upon the accurate timing of a minimum of 10 complete revolutions (10 miner's inch hours). The respective quantities of flow were determined in miner's inches by multiplying the number of complete revolutions by 60 and dividing the product by the average time to one-tenth of a second, and based thereon the measured discharges of the four wells are as follows:

Well No. 9	259 miner's inches
Well No. 10	286
Well No. 11	301
Well No. 12	384
Total	1,230 miner's inches

I further certify that the foregoing measurements were accurately made and that the methods employed and equipment used accurately reflect the discharge of each well under the existing conditions and as stated above within the accepted limits of error.

C-1b Point of Diversion

Additional Points:

SE SW Sec. 22; SE NE Sec. 11; NW SE Sec. 3; SE SE Sec. 9; NE NE Sec. 23; SE SE Sec. 11; NW SE Sec. 10; NE SW Sec. 2; SE SE Sec. 23; NW NE Sec. 10; SW NW Sec. 16; all in T11S, R27E, Boise/Meridian, and NE SW Sec. 35; SW SE Sec. 35; both in T10S, R27E, Boise/Meridian. SE SE Sec. 20, T11S, R27E (new point of diversion well #11).

C-1c Description of Diverting Works

It is proposed to change the points of diversion under license #G-31818 by adding one additional well to the existing points of diversion that have been covered under the license and subsequent transfer #1598. All of the wells are now existing wells and are utilized to irrigate the lands as described under the original right and subsequent approved transfer #1598.

C-1d Reasons for Applying for Change in the Points of Diversion

The purpose of filing this application is to improve the efficiency of the applicants irrigation system and provide a greater flexibility in the utilization of ground water on the lands owned by the applicant. There will be no enlargement of the water right now held by the applicant either as to the quantity of water that is to be diverted nor the land irrigated. The maximum rate at which the water will be diverted under any combination of the wells will be 36.0 cubic feet per second, with a maximum total annual diversion of 7,680 acre feet for irrigation of 3,360 acres of land as described in paragraph 8. These lands are irrigated in combination with other water rights as previously established by the Department of Water Resources. The wells and diversion works were described in detail in the attachment to application for transfer of water #1598 approved by the Department of Water Resources on May 12, 1969. Information regarding those diversion structures, wells, and pumping systems can be obtained by referencing this information now on file with the Department.

3 Remarks

The map shown under 2-B shows the locations of the wells previously described under existing license G-31818 and subsequent approved transfer #1598. The new point of diversion is shown as well #11 in the SE/4 SE/4 Sec. 20, T11S, R27E. The lands irrigated by said waters are accurately shown in the maps submitted as part of the proof under permit #G-31818 now on file in the office of the Department of Water Resources and will not be changed hereunder.

**ACTION OF STATE RECLAMATION ENGINEER
AND CERTIFICATE OF TRANSFER**

APPROVED

This is to certify that I have examined Application for Transfer of Water Rights No. 1598,
and said application is hereby approved

1. Approval of said application is subject to the following limitations and conditions: The maximum rate of diversion shall not exceed 36.0 c.f.s. or a total annual withdrawal of 8,064 acre feet/annum under maximum Permit No. G-31818 or in combination with maximum Permit No. G-31956 shall not exceed the maximum rate of diversion of 60.0 c.f.s. or a total withdrawal of 13,440 acre feet. Permanent measuring devices of a type approved by the Department of Reclamation are to be installed at any and all points of diversion.

2. Denial of said application is for the following reasons: _____

Witness my hand this 12th day of May, 19 69.

10. Change In Point Of Diversion (continued)

Additional points of diversion:

(11) SE $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 20; (9) SW $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 21; (10) SE $\frac{1}{4}$ NW $\frac{1}{4}$ Sec. 22;
 (A) NW $\frac{1}{4}$ NE $\frac{1}{4}$ Sec. 10; (B) NW $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 3; (D) NW $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 10;
 (E) SW $\frac{1}{4}$ NW $\frac{1}{4}$ Sec. 16; (G) SE $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 9; (H) NE $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 2,
 all in Township 11 South, Range 27 East, Boise Meridian and
 (C) NE $\frac{1}{4}$ SW $\frac{1}{4}$ Sec. 35; (F) SW $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 35, both in Township 10
 South, Range 27 East, Boise Meridian.

It is proposed to change the points of diversion under License No. G-31956 by adding eight additional existing wells to the existing points of diversion under said License. The wells presently covered by said License are designated above as Nos. (9), (10), (11) and (12) and the additional wells to be included hereunder are designated as (A), (B), (C), (D), (E), (F), (G) and (H) which were initially drilled by applicant as drainage and recovery wells carrying applicant's respective designations as R-1 to R-8 inclusive.

The purpose of filing this Application is to improve the efficiency of applicant's distribution system and to conserve evaporation and seepage losses of waters by using the well or wells situated more closely to the particular field or fields being irrigated rather than transport waters long distances through ditches and canals.

There will be no enlargement of the rights of Applicant hereunder, either as to quantity of water diverted or acreage irrigated. The maximum rate at which water will be diverted under any combination of the wells hereunder will be 24.0 second feet, with a maximum total annual diversion of 5,760 acre feet for the supplemental irrigation with License No. G-31818 of a maximum of 3,360 acres of land as described in paragraph 8 herein.

Well (A) is a 20 inch diameter cased well 119 feet deep and is equipped with a Western Pump, Serial No. 17296, with an Amarillo Drive, Serial No. 4866, and driven by an Allis Chalmers engine, Serial No. R20098.

Well (B) is a 20 inch diameter cased well 110 feet deep and is equipped with a Western Pump, Serial No. 17291, with an Amarillo Drive, Serial No. 0L35578, and driven by an Allis Chalmers engine, Serial No. R8024.

Well (C) is a 20 inch diameter cased well 110 feet deep and is equipped with a Western Pump, Serial No. 17295, with an Amarillo Drive, Serial No. 0L12117, and driven by an Allis Chalmers engine, Serial No. R26117.

Well (D) is a 20 inch diameter cased well 120 feet deep and is equipped with a Western Pump, Serial No. 17297, driven by a 20 horsepower Fairbanks Morse electric motor, Serial No. PM10178.

Well (E) is a 20 inch diameter cased well 120 feet deep and is equipped with a pump with an Amarillo Drive, Serial No. 0L21175, and driven by an Allis Chalmers engine, Serial No. CR29568.

Re: Harold Calder - Raft River Ranch

Dear Mr. Tippet:

In behalf of Harold Calder I submit for your review and consideration the following summary of the water rights owned by Mr. Calder for use on the Calder Raft River Ranch.

(1) Water License No. 20665 issued August 9, 1955 covering 5.66 cfs (223 miner's inches) from two wells designated as

"O"-1 situate in Northeast Quarter Southeast Quarter Section 3, Township 11 South, Range 27 East, B. M. and

"O"-2 situate in Northeast Quarter Northeast Quarter Section 10, Township 11 South, Range 27 East, B. M.

for domestic and irrigation purposes, covering the irrigation of 313 acres of land.

(2) Water License No. G-31813 issued September 27, 1968 covering a maximum of 7,680 acre feet of water annually to be diverted at a maximum rate of 36 cfs (1800 miner's inches) from six wells having a combined capacity of 2,090 miner's inches, for the irrigation of 3,360 acres of land (supplemental to Water License No. G-31956) from April 1 to November 1 and stockwatering from January 1 to December 31. The wells are designated and situated as follows:

No. 3 - Northeast Quarter Northeast Quarter, Section 23, Township 11 South, Range 27 East, B. M.

No. 4 - Southeast Quarter Southeast Quarter, Section 11, Township 11 South, Range 27 East, B. M.

No. 5 - Southeast Quarter Southeast Quarter, Section 23, Township 11 South, Range 27 East, B. M.

No. 6 - Southeast Quarter Southwest Quarter, Section 22, Township 11 South, Range 27 East, B. M.

No. 7 - Southeast Quarter Southeast Quarter, Section 15, Township 11 South, Range 27 East, B. M.

No. 8 - Southeast Quarter Northeast Quarter, Section 11, Township 11 South, Range 27 East, B. M.

(3) Water License No. G-31956 issued on September 27, 1968 covering a maximum of 5,760 acre feet of water annually to be diverted at a maximum rate of 24 cfs (1200 miner's inches) from four wells having a combined capacity of 1,230 miner's inches for the irrigation of 3,360 acres of land (supplemental to Water License No. G-31818) from April 1 to November 1 and for stockwatering from January 1 to December 31. The wells are designated and situated as follows:

No. 9 - Southwest Quarter Southeast Quarter, Section 21, Township 11 South, Range 27 East, B. M.

No. 10 - Southeast Quarter Northwest Quarter, Section 22, Township 11 South, Range 27 East, B. M.

No. 11 - Southeast Quarter Southeast Quarter, Section 20, Township 11 South, Range 27 East, B. M.

No. 12 - Northeast Quarter Southeast Quarter, Section 14, Township 11 South, Range 27 East, B. M.

43-4015 (4) A right by diversion and beneficial use to an additional 30 miner's inches of water from the two wells described in paragraph (1) hereinabove, as a supplemental supply to irrigate the same 313 acres described therein.

43-4012 (5) A right by diversion and beneficial use to divert 350 miner's inches of water from two prior existing wells designated as

"E"-3 situate in Northwest Quarter Northwest Quarter, Section 15, Township 11 South, Range 27 East, B. M. and

"E"-3A situate in Northeast Quarter Northwest Quarter, Section 15, Township 11 South, Range 27 East, B. M.

to irrigate 485 acres of land.

THE CALDER MATTER

Application No. G-39375, filed July 19, 1963, covers six wells.

My letter of October 28, 1963 approves these wells. (We have awaited this brief on four wells)

Page 2 - Paragraph 2

Mr. Calder not being familiar with the requirements of Idaho Law -

- - - -

Question: Why wasn't he? Ignorance of law is not a valid excuse.

Who assured Mr. Calder?

Page 3 - Paragraph 2

The statement - "Mr. Calder was informed that it was customary under Idaho practice to first drill and test a well before an application for permit was filed."

Question: Who informed Mr. Calder?

Page 4

Mr. Calder was advised - "that the customary practice was to first drill and test a well before an application for permit was filed - - - - and the custom seems to be consistent with applicable provisions of the Idaho Code, at least prior to the 1963 Amendment."

Answer: See Session Laws of 1951, Chapter 200, Section 4 -
In view of the 1953 amendment to the Underground Water Code (42-231) which states - "It shall likewise be the duty of the state reclamation engineer to control the appropriation and use of the ground water of this state as in this act provided and to do all things reasonably necessary

MICROFILMED

MAR 19 1993

Page Two - The Calder Matter

or appropriate to protect the people of the state from depletion of ground water resources contrary to the public policy expressed in this act." The department of reclamation did not then, or since, allow the "customary practice" of opening of wells and testing before filing an application for permit.

Idaho Code, 1953 amendment, 42-238, requires well drillers to "keep a log of each well that may hereafter be excavated or opened by him in Idaho including wells excepted under section 42-227 and 42-228, Idaho Code and to furnish a copy of such log - - duly signed, to the state reclamation engineer within thirty days following the completion of such well." This again disavows the "customary practice" referred to above.

Page 5 - Line 6

If the "customary practice" was followed after the 1963 amendment was enacted then the well driller was not complying with the law.

Line 6

Reference to Idaho Code 42-233a states that a permit shall be issued in accordance with the provisions of Section 42-234 which states that "whenever the state reclamation engineer determines that a permit shall issue - - " In this case the individual could not have advance knowledge that any particular area was going to be a critical ground water area. Any intention to declare a critical area, if made known, would simply invite as many applications as could be submitted.

Page 6 - Line 4

It is noted that the Kuwana lease was executed on April 1, 1963, and that the Ground Water Law and amendments thereto were in effect.

MICROFILMED

MAR 19 1993

631818

Page Three - The Calder Matter

A copy of this lease was received in this office September 12, 1963, though Line 6, Page 6, states a copy of this lease was previously sent to us, though the reason for sending us a copy is not clear.

Page 7 - Line 9

How would curtailment of the state on new wells be effected unless ^{leaves} ~~leave~~ an application therefor had been made? This sentence ~~leave~~ the thought of "drilling as many wells as possible" before permit could be asked for, or before the state could interfere.

The affidavit to accompany this brief which was to detail the construction of these wells, a log of the operation has yet to be received. We understand that difficulty was encountered during the construction, and a log of each well was intended to be forwarded to this office.

Page 8 - Line 23

We are not arguing that had Messers Kuwana and Calder made proper application, etc., they would not now face a serious dilemma. The Underground Water Law was on the books and its requirements were plain. Calder was familiar with underground water problems in Utah. It would seem that prudence would dictate a study of similar conditions elsewhere.

Page 11 - Line 7

We appreciate the realization that caution must be exercised in proceeding with additional development but with respect to the doctrine first in time, first in right, and Idaho Code 42-226, which states that this doctrine shall not block full economic development of underground resources, the same code assuredly does not mean that a reasonable ground water level for the big operator is a reasonable water level for the little operator.

TAPPAN 4/1/64

Page Foour - The Calder Matter

Finally we note that Water Supply Paper 1619 C C in the last paragraph this statement - "Regardless of whether the underflow was 140,000 acre feet or 200,000 acre feet annually in 1955, increased withdrawals since that time are acting to reduce the underflow."

Withdrawal in 1962 and 1963 was some $124,400/129,900$ acre feet. *respectively.*

Water License No. G-31818 Priority July 19, 1963 Amount 36.0 c.f.s.

THIS IS TO CERTIFY, that HAROLD CALDER
of Bountiful, Utah, made application for a permit to appropriate the public waters of
the State of Idaho, dated July 19, 1963; that Permit G-31818 was issued pursuant
to said application; that the proposed works were completed on or about 1968,
with a storage/or carrying capacity of 2090 miners inches, said works consisting of 6 wells,
vertical turbine pumps and distribution system; and that on September 20, 1968,
proof was made to the satisfaction of the State Reclamation Engineer, of the beneficial use of 7,680
acre feet per season, with a maximum rate of diversion of 36 cubic feet per second of the waters
of 6 wells, tributary of subterranean flow,
for the purpose of irrigation from April 1 to November 1;
and for stock water from January 1 to December 31; and for
from to; and that the use
of said waters has been made in accordance with the laws of Idaho, and is hereby confirmed by the State Recla-
mation Engineer and entered in the records of the Idaho Department of Reclamation: the point of diversion is
located in SE $\frac{1}{4}$ SE $\frac{1}{4}$, Sec. 15, T. 11 S, R. 27 E, B.M., and
other additional points SEE ATTACHMENT, in the County of
Cassia; and that the amount of water to which such right is
entitled and which is hereby confirmed, for the purposes aforesaid, is limited to an amount actually beneficially
used for said purposes and shall not exceed 7,680 acre feet per year.

Description and location of place of use:

7		400
8	8/21/63	272
	Total	1,857

During the month of August, 1968 the discharge of the six wells herein was measured by Robert Mac Calder, graduate Chemical Engineer, using a new Hershey Sparling 10 inch flow meter mounted in 10 inch I.D. pipe with open end discharge as follows:

<u>Well No.</u>	<u>Discharge In Inches</u>
3	210
4	318
5	336
6	400
7	336
8	500
	Total 2,100

On September 17, 1968 the discharge of the six wells herein was measured by Joseph Novak, Registered Engineer and Land Surveyor in the State of Utah, the measurements of which are shown on the attached Engineer's Certificate.

Paragraph 6 (continued)

The irrigated acreage by 40 acre tracts and the type of crops raised thereon during the 1968 irrigation season are as follows. However, the crop pattern has varied in the past, and likewise will vary in the future. Therefore, the 1968 crop pattern is representative of that year only and is not intended as a limitation herein. The grains consisted primarily of barley and some oats and wheat. The grasses comprise the irrigated pastures which consisted of a combination of crested wheat, university mix and ranger alfalfa. The irrigated acreages are shown on the accompanying aerial photograph tinted in green and is made a part of this proof by reference jointly with the proof under Permit G-31956, as amended. The acreages and locations thereof by 40 acre tracts and the crops grown thereon during the 1968 irrigation season are more particularly described as follows:

Paragraph 7 (continued)

Well No. 3 consists of an 18 inch well 403 feet deep cased with 18 inch diameter pipe to a depth of 398.6 feet as shown by the well driller's log attached hereto. It is equipped with a Layne-Bowler deep well turbine pump with 14 inch bowls of two stage type T.H.C. The pump is driven by a 150 H.P. electric motor, U. S. make, three phase, 440 volts and 1800 R.P.M. The water is discharged from the well through 10 feet of 10 1/8 inch I.D. discharge pipe directly into a concrete box 6 feet x 6 feet x 2 feet deep having two 2 feet openings with flash boards situated on the east and west sides thereof respectively, through either or both of which the water is discharged in whole or in part into two separate earthen ditches and conveyed thereby and distributed therefrom for the uses set forth herein.

Well No. 4 consists of a 20 inch well 455 feet deep cased with 20 inch O.D. pipe from 0 to 346 feet and 16 inch O.D. pipe from 339 feet to 455 feet as shown by the attached well log. It is equipped with a Layne-Bowler deep well turbine pump with 14 inch bowls of three stage type T.H.C. The pump is driven by a 200 H.P. electric motor, Westinghouse make, three phase, 440 volts and 1778 R.P.M. The water is discharged from the well through 10 feet of 10 1/8 inch I.D. discharge pipe directly into a concrete box approximately 6 feet x 6 feet x 2 feet deep having three 2 feet openings with flash boards situated on the north, south and west thereof respectively, through any one of which or combination thereof the water is discharged into three separate earthen ditches and conveyed thereby and distributed therefrom for the uses set forth herein.

Well No. 5 consists of a 20 inch diameter well 501 feet deep cased with 20 inch O.D. pipe from 0 to 275 feet and 16 inch O.D. pipe in the bottom, as shown by the attached well log. It is equipped with a Layne-Bowler deep well turbine pump with 14 inch bowls of Three stage type T.H.C. The pump is driven by a 200 H.P. electric

motor, Westinghouse make, three phase, 440 volts and 1778 R.P.M. The water is discharged from the well through 10 feet of 12 5/8 inch I.D. discharge pipe directly into a concrete box approximately 7 feet x 7 feet x 3 feet deep having two 2 feet openings with flash boards on the north and south sides thereof respectively, through either or both of which the water is discharged into two separate earthen ditches (with the south ditch immediately dividing into two ditches) and conveyed thereby and distributed therefrom for the uses set forth herein.

Well No. 6 consists of a 20 inch diameter well 602 feet deep cased with 20 inch O.D. pipe from 0 to 330 feet, 18 inch O.D. pipe from 325 feet to 500 feet, and 500 feet to 602 feet in open hole as shown by the attached well log. It is equipped with a Layne-Bowler deep well turbine pump with four stage T.H.C. type 14 inch bowls. The pump is driven by a 450 H.P. natural gas Waukesha engine, Model F2894GU-G8841. The water is discharged from the well through a 12 inch I.D. discharge pipe directly into a concrete box 8 feet x 8 feet x 3 feet deep having three 2 feet openings with flash boards on the north, east and west sides thereof respectively, through any one of which or combination thereof the water is discharged into three separate earthen ditches and conveyed thereby and distributed therefrom for the uses set forth herein.

Well No. 7 consists of a 20 inch diameter well 600 feet deep cased with 20 inch O.D. pipe from 0 to 430 feet and 16 inch O.D. pipe in the bottom as shown by the attached well log. It is equipped with a Layne-Bowler deep well turbine pump with two stage 18 inch bowls. The pump is driven by a 250 H.P. electric motor, Westinghouse make, three phase, 440 volts and 1770 R.P.M. The water is discharged from the well through a 12 3/16 inch I.D. discharge pipe directly into a concrete box approximately 20 feet x 8 feet x 4 feet deep having one opening on the north side thereof, through which the water is discharged into a head ditch equipped with four headgates by means of which the water is discharged into any one or combination of two head ditches running to the west and two head ditches running to the east and conveyed thereby and distributed therefrom for the uses set forth herein.

Well No. 8 consists of a 20 inch diameter well 560 feet deep cased with 20 inch O.D. pipe from 0 to 313 feet, 18 inch O.D. pipe for 23 feet and 16 inch O.D. pipe for 109 feet as shown by the attached well log. It is equipped with a Layne-Bowler deep well turbine pump with two stage type R.K.H.C. 18 inch bowls. The pump is driven by a 450 H.P. natural gas Waukesha engine, model F2894GU-G8841. The water is discharged from the well through a 12 1/8 inch I.D. discharge pipe directly into a concrete box 18 feet x 8 feet x 4 feet deep having two 3 feet openings with flash boards situated on the north and south sides thereof respectively, through either one or both of which the water is discharged into two separate earthen ditches and conveyed thereby and distributed therefrom for the uses set forth herein.

Remarks

The water diverted by means of the six wells covered herein is commingled with the waters diverted by means of the four wells covered by Permit No. G-31956 through an integrated system of irrigation ditches. The waters so commingled are used as a sole supply to irrigate a total of 3360 acres of land described herein and shown on the accompanying aerial photograph tinted in green. The waters herein are used during the entire irrigation season, i.e. that period during which the water can be beneficially used for irrigation purposes, generally considered to be approximately March 15 to November 15, inclusive, being one month earlier and one month later than the average frost free period. The waters herein are also used during the entire year for incidental stockwatering purposes for a maximum of 2,000 head of cattle by drinking directly from the ditches. A maximum of 1,800 inches of water will be diverted from any combination of the six wells described herein.

ENGINEER'S CERTIFICATE

I, Joseph Novak, a Civil Engineer and Land Surveyor registered in and licensed by the State of Utah, do hereby certify that:

1. On the 17th day of September, 1968 I personally measured the waters discharged by means of the six wells described in this Proof.

2. The equipment used consisted of a new Hershey-Sparling heavy duty 10 inch meter and a Swiss made Security Stop Watch calibrated to one-tenth of a second. The meter was installed in a portable 6 feet section of 10 inch I.D. light weight pipe equipped with three Hershey-Sparling standard metal vanes mounted in the interior thereof parallel to the length of the pipe and at angles of 120 degrees with the trailing edge of the vanes situated 5 1/4 inches ahead of the center of the meter. The meter was mounted with its center 50 inches below the intake and 22 inches above the discharge end. The meter was calibrated in miner's inch hours with a totalizing dial and a sweep hand dial divided into tenths of one revolution.

3. Each measurement was made by connecting the said portable section of 10 inch I.D. pipe to the end of the discharge pipe with either Dresser couplings or plastic connectors, with the discharge end of said portable section slightly elevated to assure a full pipe of water through the meter section.

4. A minimum of three measurements was made of the discharge of each well after sufficient pumping to insure stabilization of the discharge thereof. Each measurement was based upon the accurate timing of a minimum of 10 complete revolutions. The respective quantities of flow were determined in miner's inches by multiplying the number of complete revolutions by 60 and dividing the product by the average time to one-tenth of a second and based thereon the measured discharges of the six wells are as follows:

Well No. 3	216 miner's inches
Well No. 4	331
Well No. 5	325
Well No. 6	369
Well No. 7	380
Well No. 8	469
Total	2,090 miner's inches

I further certify that the foregoing measurements were accurately made and that the methods employed and the equipment used accurately reflect the discharge of each well as stated above within the accepted limits of error.

Static Water Level 133'

This well was test pumped for 5 hours and had the indications of a good well from the start. The water cleared up several times and would get slightly dirty when we increased the capacity. At the end of the test the water cleared up and held steady. This well will produce more water than our badly worn test bowls pumped. Very likely the well will produce 350 to 400 inches of water with additional draw down.

2400	266	195
2600	290	200

The well was tested for two hours and was good from the start. A very small amount of sand was pumped, which cleared up very soon. Backflushing seemed to have no effect on the well. This well will be able to pump with our test unit.

The well was tested for four hours and was good from the start. Very little sand was pumped and the water cleared up fast. The test was limited due to insufficient ditches to carry the water away from the potatoes being cultivated. This well will probably produce 400" of water from all indications.

HAROLD CALDER --- WELL TEST, UNIT # 7
SE $\frac{1}{4}$ SE $\frac{1}{4}$ Sec. 15, T. 11S., R. 27E.

Total depth of well is 600'

Static water level is at 97'

<u>GPM</u>	<u>INCHES OF WATER</u>	<u>PUMPING LEVEL</u>
1000	111"	120'
1350	150"	122'
1700	190"	123'
2100	233"	128'
2350	261"	132'
2600	290"	136'
3000	333"	140'
3600	400"	147'

The well was test pumped for 9 hours. Some fine sand and fine gravel was pumped. There was no heavy run of sand or gravel after the well initially cleared up. However, there was a continuous small amount of sand and gravel for several hours. This is a very strong well and should produce a large volume of clean water.

TODD KUWANA
Well Test #8
August 21, 1963

Started Test - 10:30 A.M.

Running slow - Water Muddy - No Reading

Increased speed as water cleared.

1st Reading	250"	2200 GPM	155' Depth
2nd Reading	258"	2325 GPM	155' Depth
3rd Reading	272"	2450 GPM	155' Depth

4th and subsequent readings showed increasing capacities with water continually clearing until pitot readings ran off chart. Estimated capacity of 500" (4500 GPM) from final depth of 165'. Engines completely loaded to capacity of bowls. Only 4½ hours engine time required to clean up and develop well.

APPLICATION FOR PERMIT
To appropriate the Subterranean Waters of The State of Idaho

Application No. G- 39375
Permit No. G- 31818
District No.

1. Name of Applicant: HAROLD CAIDER, c/o Joseph Novak, 520 Continental Bank Building
Postoffice address: Salt Lake City County: Salt Lake State: Utah 84101
2. Quantity of water claimed: 36.0 cubic feet per second
(a) Rate of withdrawal in cubic feet per second or Idaho
Miners' inches or gallons per minute
(b) Annual withdrawal in acre feet per annum
3. Source of water supply: Subterranean NE 1/4, SE 1/4, Sec. 23; SE 1/4, Sec. 22;
4. Location of point of diversion or well is in the SE 1/4 of the 1/4 of Section 11; SE 1/4, Sec. 15;
Twp. 11 S., Rge. 27 E., B.M., County of Cassia
5. Water is to be used for: Irrigation and domestic
6. If for municipal, industrial or recreational purposes, give:
(a) Point of use of water is in the 1/4 of the 1/4 of Section, Twp.
Rge. B.M.
(b) Waste water or sewage effluent is to be returned to
at a point in the 1/4 of the 1/4 of Section, Twp., Rge. B.M.
7. Kind of works: 6 wells equipped with turbine pumps, ditches
8. Estimated cost of works: \$150,000.00
9. (a) Is reservoir to be used? No
(b) Capacity of reservoir:
10. The time required for the completion of such work and complete application of the water to the proposed use is 5 years.
11. If applicant is a corporation, give:
I. (a) Date and place of incorporation:
(b) Amount of capital stock: \$ (c) Amount paid in: \$
(d) Names and addresses of directors:
II. The financial resources of the applicant are (a) Cash onhand: \$
(b) Treasury stock: (c) Bonds to be issued:
(d) Other resources: Agreement with Ted Kuwana and Layne-Bowler Pump Co. to complete the works
12. The land to be irrigated is described in the following tabulation:
13. Existing water rights and/or valid permits appurtenant to the lands to be irrigated are: None
(a) 0 (cubic feet per second, inches or gallons per minute) of the water herein applied for is to be supplemental to the existing water rights.
(b) 36 (cubic feet per second, inches or gallons per minute) for new lands.

Idaho herein set forth.

s/ Harold Calder

Applicant.

8:00 A.M. By

Agent.

Date of first receipt at Department of Reclamation: / July 19, 1963

Returned to applicant for correction:

Corrected application received:

Approval of State Reclamation Engineer

The number of this permit is G- 31818

Recorded in Book 111

Page 31818

Approved April 13, 1964

This is to certify that I have examined the within application for a permit to appropriate the public waters of the State of Idaho, and hereby approve the same, subject to the following limitations and conditions:

Bond in the sum of \$1,000.00

to be filed on or before June 13, 1964

Work to begin on or before

and to continue diligently and uninterruptedly to completion, unless

temporarily interrupted by circumstances over which the permit holder has no control.

One-fifth of the work above specified to be completed on or before October 13, 1966

The whole of said work to be completed and beneficial use of water appropriated in accordance herewith, to be made and proofs offered on or before April 13, 1969

Witness my hand this 13th

day of April, 1964

s/ CARL E. TAPPAN

STATE RECLAMATION ENGINEER.

IN TESTIMONY WHEREOF, We, ROBERT E. SMYTHE

and ARNOLD WILLIAMS

Governor of the State of Idaho,

Secretary of State of the State of Idaho, have caused this instrument to be executed in the name of the State of Idaho, and caused the Great Seal of the State of Idaho to be hereunto affixed, this 13th day of April, 1964

Countersigned:

STATE OF IDAHO

(SEAL)

By s/ ARNOLD WILLIAMS

By s/ ROBERT E. SMYTHE

Governor

Secretary of State.
