Comments: Date: 06/23/1998 User-ID: SBOCK Subject: PERMISSIBLE PLACE OF USE
I SPOKE TO VIC CONRAD ON 6/22/1998, ABOUT CREATING A PPU FOR THE
RIGHTS OFF OF DEER CREEK. HE AGREED THIS WOULD BE THE BEST
COURSE OF ACTION TO TAKE. I ALSO TALKED TO FRANK BACHMAN ON
6/17/1998, AND HE SAID THE WATER IS USED IN A PPU FASION RIGHT
NOW. CURRENT IDWR POLICY IS TO ALLOW THE AMOUNT OF WATER DECREED
OR LICENSED IF CLAIMED IN AN AREA WHICH WILD FLOODING IS THE
COMMON AND ACCEPTED PRACTICE, UNLEES LIMITED BY DITCH CAPACITY.
THIS CLAIM IS NOT LIMITED BY CAPACITY. CURRENT IDWR SEASON OF
USE FOR THIS AREA IS 4-1 THROUGH 10-31.

SOURCE: DEER CREEK — TRIB: THREE CREEK —

REVIEWED BY: T. Hansen DATE: 12/16/1996

SYSTEM DESCRIPTION: DESCRIBED BELOW (), SEE LICENSE FILE (), OR SEE ATTACHMENT (X)

Changed to P.P.U. per Joe Conrad 10/22/98

SYSTEM DESCRIPTION ATTACHMENT

A51-00125

The point of diversion is located on Deer Creek in the SWMNNE of S. 35, T15S, R11E. The diversion structure consists of a wooden headbox in the stream which dams up the water to the ditch. The headbox is 12 feet wide, 10 feet long, and 4.4 ft high. The diversion is identified as No. 6 by Mr. Liesen.

The ditch leaves the stream on the north side, parallels the creek for a short distance, then turns in a northerly direction and swings toward Mud Flat Draw. Ditches run off the main ditch to interior of the irrigated acres. The acres adjacent to Mud Flat Draw may also receive water from Mud Flat Draw.

All irrigation is flood irrigation from earth ditches. Mr. Liesen described the irrigation practices as follows:

Water flows into the ditches during Spring run-off. Active diversion may or may not be required, but in high water flows go down the ditches regardless of the diversion structures in the stream. Diversion structures are used if needed. After Spring run-off the fields are allowed to dry out in order to cut hay. No active irrigation is conducted after the hay is cut because Mr. Liesen and his help are busy moving cattle, and with other ranch duties. Water flows in the creeks all summer, but the labor necessary to irrigate is not available later in the irrigation season.

M. Minicucci 12/16/1996

CHECK DOCUMENTS USED TO VERIFY POB: (X) ORTHOPHOTOQUAD, IDMR NO. DD67; () TOPOGRAPHIC QUAD, IDMR NO. _____;

(X) NAPP, IDMR NO. DD67-NE; (X) OTHER MR. LIESSEN'S MAP

NOTES: 12/13/1996. Record acres are based on the 1987 ASCS map. Using the
for grid method. These recommendations may change if technology allows
for more accurate assessments of the irrigated acres. The place uses
the irrigated acres between Deep Creek & Mud Flat Draw. Although the
decreased place 7 use is the N 1/2 NW 1/4, this point of diversion also
extends in the S 1/2 SW 1/4 - that portion that is south of the Mud Flat Draw
drainage. ASCS identifies the POB as field No. 2. 0777

is the limiting factor
See next page

NOTES:

6/18/1998 Current TDRS policy is to allow full amount of CF's demand of wild flooding in the accepted practice in an area. The Wildlife Analysis is not required unless limiting factor is ditch capacity. In this case ditch capacity is 3.26 per full amount demand and is recommended. If no diversion would make TDRS not

RE: Snake River Basin Adjudication (SRBA) Notices of Claims for Three Creek Ranch

Dear Mr. Bachman:

The Department is currently in the process of reviewing and preparing the following Notices of Claims for court decree in the SRBA. This process includes field verification, use of orthophotoquad and ASCS maps, NAPP photography, and correspondence with the ranch manager. During this review process a question has arisen concerning the flow rate claimed for these claims.

You indicated during a visit to this office that you wish to claim the full amount of each decreed right because the irrigation practices on Three Creek Ranch require more than the normal duty of water under Idaho water law.

Department policy requires excessive flow calculations for each of these claims which claim more than 1 inch of water per acre. These calculations require information which is not readily available to me, such as set times, frequencies, and breakdowns in acres of the types of crops grown. In order to determine if more than one inch per acre is needed, the enclosed Irrigation Flow Rate Questionnaire must be completed for each right. Once this form is completed and returned, the Department can determine if more than 1 inch per acre is needed.

Please return these forms to this office within 30 days of the date of this letter. If we do not receive these forms within that time period the Department will recommend 1 inch per acre for these claims. The claims will also include an amount of water for stock water in addition to the irrigation water amount.

Notice of Claim No. A51-00121:

This claim was filed for 2.06 cfs for 105.6 acres. The review found 42 acres. This is almost 2 1/2 inches of water per acre.

Notice of Claim No. A51-00124:

This claim was filed for 3.06 cfs for 160 acres. The review found 50.5 acres. This is over 3 inches of water per acre of land.

Notice of Claim No. A51-00125:

This claim was filed for 1.50 cfs for 80 acres. The review found 40 acres. This is almost 2 inches of water per acre of land.

Notice of Claim No. A51-00126:

This claim was filed for 2.70 cfs for 145 acres. The review found 85 acres. This just over 1 1/2 inches of water per acre of land. An amended claim is enclosed for this claim. We discussed that this right was decreed with the source of Deer Creek, but was incorrectly claimed as Three Creek. The amended claim changes the source back to the originally decreed source of Deer Creek. The point of diversion was also changed to reflect the diversion point for the ditch which serves the decreed acres. Please review this amended claim, initial any changes you wish to make, complete the claim by adding the appropriate notarized signature, and return it to this office.

Notice of Claim No. A51-00127:

This claim was filed for 1.88 cfs for 94 acres. The review found 37 acres. This is more than 2 1/2 inches of water per acre of land.

Notice of Claim No. A51-00128:

This claim was filed for 4.28 cfs for 225 acres. The review found 106 acres. This is over 2 inches of water per acre of land.

Notice of Claim No. A51-00129:

This claim was filed for 2.40 cfs for 120 acres. The review found that these acres, which are on high ground between Three Creek and Deer Creek, are not irrigated. This finding was confirmed during conversations with the ranch manager and with you.

Enclosed are copies of orthophotoquads for each of these claims, with the points of diversion and places of use indicated on each map. If you do not agree with delineations of each of these claims, or have any questions or comments, please contact me at this office.

Sincerely,

Maria Minicucci

RE: Snake River Basin Adjudication Notice of Claims for Three Creek Ranch

Dear Mr. Liesen:

Enclosed are copies of satellite photos of the Three Creek Ranch area. You had mentioned during our field exam of the ranch that you would be willing to draw in the points of diversions and their associated irrigated acres, if we could provide these photos to you.

I have enclosed some colored pens and markers. I find that using colors can be the best way to visually connect diversion points to irrigated acres.

Your assistance with this matter is greatly appreciated. I hope to use your completed maps to support the findings of the field exam and to help decipher the irrigation system on Three Creek Ranch.

Thank you once again for your help. Please contact me at the number at the top of this letter if you have any questions or comments.

Sincerely,

A handwritten signature in cursive script, appearing to read 'Maria Minicucci'.

MANNING EQUATION CHANNEL CAPACITY RESULTS

05-28-1996

File Number: A51-00125?

Claimant: SIMPLOT LIVESTOCK

Channel measured: DIV PT NO. 6

Date of measurement: 05/23/1996

Measurement location:

S35 SWNWNE NWSWNE

Calculation prepared by: M. MINICUCCI

Comments about the measurement:

MEASUREMENTS BY KW & MM. WOODEN DAM IN STREAM
LOCATION ON MR. LIESEN'S MAP.

CAPACITY

The results of the calculation are:

The channel cross section is 2.31 ft-sq.

The wetted perimeter is 5.72 feet.

The hydraulic radius is 0.40 feet.

The slope is 0.0091

The roughness coefficient is 0.0550

The flow velocity is 1.412 ft/sec.

The rate of flow is 3.26 cfs.
