>

Jay and Kenneth Black came into the office to go over the recommendations of their various claims on Grape Creek, and to file a new irrigation claim on Savage Hollow Creek.

The priority date of the use of Savage Hollow Creek is based upon the priority date of the later decree on that same place of use, which is April 1, 1881. Mr. Black believes that the original settler of the property began to utilize Savage Hollow as soon as development began on the higher ground that the creek flows onto located in the SENE Section 6, T15S, R25E. From the old ditches that are still evident there, Mr. Black estimated that 20 to 25 acres were flood irrigated beginning in the early 1880's. With Jay Black's help, I drew a rough polygon on GIS to approximate the acres irrigated. A later refinement which more closely followed the contour of the land calculated to 22 acres. The diversion rate recommended is 1 inch per acre.

Mr. Black now uses the water of Savage Hollow in two ways, depending on the crop planted in that portion of the farm. Some years he flood irrigates from the diversion at the east fenceline of the SENE Sec 6. Some years he diverts the creek into the pond located in the SWSE Section 6 and co-mingles the water with Grape Creek and Ground water in his sprinkler system.

Mr. Black says that water for irrigation purposes is available in Savage Hollow creek sporadically, and only in a year with good snow pack. If not diverted, the creek would flow into Grape Creek, therefore, Mr. Black rotates use of the creek the same as Grape Creek, allowing downstream users the use of Savage Hollow when it is their irrigation turn on Grape Creek.

*Note:
Decreed right 43-403A is for highwater &
not subject to the 1 inch per acre
limitation. UH.*
