REASONS SUPPORTING EACH BOX CHECKED

In response to Statement of the Objection item 8, and all allegations of the objection regarding this item, IDWR responds as follows: Idaho Code Sec. 42-1411(2)(g) requires the director to determine the period of use of each water right acquired under state law that is recommended in the director's report. IDWR's irrigation season of use standards have evolved over time as better technical information has become available. A necessary consequence of this is that, depending on when a particular license was issued, water rights in the same area have been licensed inconsistently, some licenses being issued with different lengths of season listed and some being issued with no season of use listed. To remedy this problem IDWR has developed irrigation season of use standards for various climatic areas throughout the state based on a 75% chance of a 24 degree

fahrenheit frost. The period of the year during which this water right may be used is consistent with the standard irrigation season of use for the area in which the place of use of this water right is located. The director's report does not prohibit pre-season or post-season irrigation; subject to the conditions set forth in general provision 12b of the director's report, water may be used for irrigation outside the standard season of use.

In response to Statement of the Objection item 10 and all allegations of the objection regarding this item, IDWR responds as follows: The license upon which the claimant's claim is based does not set an annual volume of consumptive use for this water right. Idaho Code Sec. 42-1411(2)(i) requires the director to determine the annual volume of consumptive use for each water right acquired under state law and recommended in the director's report. IDWR has developed uniform standards of consumptive use for various climatic areas throughout the state, based upon the definition of consumptive use contained in Idaho Code Sec. 42-1401A(2), which is the maximum volume of water consumed by "the most water consumptive crop that can be grown in the area during the period of year when water is used for irrigation." The consumptive use recommended for this water right is based upon the maximum volume of water consumed by the most water consumptive crop (pasture) that can be grown in the area during the irrigation season. Idaho Code Sec. 42-1401A(2) provides that the quantification of consumptive use "is included as a rebuttable presumption in a decree only for the purpose of transfers pursuant to section 42-222, Idaho Code." Therefore, the consumptive use recommended for this water right is included solely for use in future transfer proceedings, and not as a limitation on the quantity of water that the claimant may divert pursuant to this recommended right. As consumptive use volume and diversion volume are two different elements of the water right, the diversion volume cannot properly be substituted for the consumptive use volume of this recommended water right. In further response to this objection item, IDWR responds that it recommended this element of the water right as claimed.

CHANGES TO THE DIRECTOR'S REPORT

The director proposes no changes to the description of this claim in the Director's Report.
