Department of Water Resources

Dear Dave:

Attached you will find the certified measurement of water produced by two electric powered pumps located in Lot 7, Section 36, T3S, R1E; and a diesel powered pump installed in Lot 4, Section 35, T3S, R1E. These pumps were installed in the Snake River under the auspices of permit 02-7086 in the name of Mr. Alfred Heywood, Star Route Oreana, Murphy, Idaho 83650. The quantity of water under this permit is 8.0 cfs for the irrigation of 548 acres. The total flow measured from the three pumps was 10.47 cfs. I have advised Mr. Heywood that an additional permit should be filed for the water over and above the 8.0 cfs for irrigation of additional acreage on his ranch which will bring the total water diverted up to one miners inch per acre.

I measured the flow from the electric pumps on June 2, 1981 with a Collins air/water manometer in a section of straight discharge pipe approximately 20 feet in length. The velocity was very stable and I feel measurement accuracy is excellent. The diesel powered pump was measured in a section of 12 inch mainline which also gave excellent accuracy. My purpose for providing you this water measurement is that Mr. Heywood has retained me to measure the water for him for his proof of beneficial use submission. You will find enclosed his proof of beneficial use card requesting that the measurement be made for this permit. If it is necessary to measure the land irrigated, please let us know as far in advance as possible since Mr. Heywood is often not at the ranch. If you have any questions, please don't hesitate to contact me.

Sincerely yours,

Sherl

WATER MEASUREMENT HEYWOOD RANCH OWYHEE COUNTY, IDAHO

The flow from the two 125 horsepower pumps located on the Heywood Ranch, Star Route Oreana, Murphy, Idaho 83650 was measured on June 2, 1981 by Sherl L. Chapman, Consultant. The measurement was made using a Collins air/water manometer and standard water measuring procedures with average velocity being obtained by a ten point measurement through the 14 inch diameter discharge pipe. The discharge section is over 20 feet in length without obstruction and measurement accuracy is to be considered excellent. Serial numbers for the Newman electric motors are V1137501 and V1137502. Both are operating on 480 volt, three phase electrical power and the water pumped as measured was 8.32 cfs which equals 3,744 gallons per minute or 416 miners inches. Operating pressure of the system was 60 psi and the pumps were operating at 72 and 76 percent efficiency respectively.

Subsequent to the measurement of the two 125 horsepower pumps as described above, an additional measurement was made on August 7, 1981 of water produced from a diesel pumping plant installed on the Snake River. This pumping plant discharged water to a common irrigation system with the two 125 horsepower pumps through a 12 inch portable mainline. The diesel pump was a 60 horsepower unit equipped with a Berkeley centrifugal pump head, serial number 7739305. The pump was rated for production of 1,250 gallons per minute at 60 psi total dynamic head. The measurement conducted utilized a calibrated portable inline flow meter installed in the mainline. The flow measured on this date was 968 gallons per minute or 2.15 cubic feet per second. The efficiency of the diesel pumping plant was not measured at this time.

If any questions arise regarding these measurements, please contact Sherl L. Chapman, Consultant.

Re: 02-7086 & 02-2100A

It is my recollection that when I talked to Mr. Heywood he said that the 8 acres that was recorded on the field exam was part of the 13 acres I identified under Rt. 02-2100. Therefore it was removed from the field exam and LIC.

It appears that you are saying that Mr. Haywood developed 8 acres in addition to the 13 acres.

Since I did not hear back from Mr. Heywood when his license was sent I assumed he agreed w/ the license amounts.
