REMARKS:

The decme lists 1 P/D in the N 1/2 of the SW 1/4. I found the original P/D to have actually been in the SWSE 1/4 of Sec 13 just north of the quarter quarter line. The P/D was changed when the river channel cut across the gate much and rotated the P/D. The new P/D is about 150' to 200' north and still within the same legal description. the change in legal description for the new P/D would be a clerical change to identify that the original listing was incorrect and that the more of that P/D is within the same 10 Acre tract and therefore does not require a transfer. Maps verified from field verification as identified on USDA-F 173-120 and other Photo 71-168.

PRESUMPTION FLAG: D

REMARKS:

The boundary considered to be the Property line on the North, east, & south.
The west boundary is the Ditch channel from the Shiloh River (diversion) and
the natural drainage as marked on the photo. The irrigation water does
not cross either the drainage or the ditch (to the west). That ground is naturally
and irrigated from Valley Creek.

The system was measured by the F&B team several times over the year in conjunction with their fish census program. In a telephone conversation with Phil the Rose on 10-19-93 their measurements on this ditch were as follows:

6-29-93 - 1.10 CFS
7-27-93 - 1.80 CFS
9-1-93 - .60 CFS
8-25-59 - 5.70 CFS

REMARKS: (Include limitations on CONSUMPTIVE USE for combined rights.)

Stock water use does occur on prop. and the claimed 0.03 CFS is the legal limit for 100 head based upon Dept table #6.

Limit right is the decreed rate to avoid expansion of right during migration season.

Therefore the decreed rate is the limiting rate.

Measurements over time indicate that the ditch has the capacity to carry more water than decreed. Since flow analysis based upon a today water practice gives a legal limit of 5.44 CFS

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.
