REMARKS:

P/D found in the same tract as claimed. The system is intended to be changed per claimant. They plan on filing a Transfere and moving the P/D down stream to a point just west of Hwy 93. Some spots in the ditch from the P/D to the Highway, have been filled in. Date of last use not known but is near the 5 yr non-use deadline. I am recommending the existing P/D pending any Transfers.

**ANALYSIS OF RIVER RANCH P/U
BLECHMANN RIGHT 71-02101 AND USDA-F**

KKC

The place of use for this right was originally licensed for virtually all of the property owned by the Blechmanns on both sides of the Salmon River.

I found one point of diversion and one ditch system from the Salmon river. The delivery system was not functional at the exam date. The claimants indicated that they expect to file a transfer to change the point of diversion to a point downstream from the current diversion location. Although there is some indication that there has been several years since the system has delivered water to the P/U the exact date of last use has not been established, and therefore I am recommending this right as valid at this time. Water was also going into the delivery system in the SENE of sec 20 from 71-02077A and 71-02077B but has not been claimed.

PLACE OF USE

I found one continuous parcel being irrigated going north from sec 20 NESE to sec 17 SWNE and laying between the ditch that forms the eastern boundary and the Salmon River and meander banks on the west. The quality of irrigation varies through out the parcel with some ground being well irrigated to other parts that have braided channels running through that area with only sub irrigation (if any) occurring on much of that spot.

The irrigated ground is alternately owned by the Blechmanns and the USDA-F (see map for ownership). I am recommending that portion of the irrigated ground owned by the Blechmanns under this right and the balance irrigated to the USDA-F if they file a claim. I notified the USDA-F about this system and its operation on June 5, 1998. All available information points toward the current system being the only system ever in existence. The priority date for the USDA-F would therefore be some date after the priority date established for 71-02101.

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

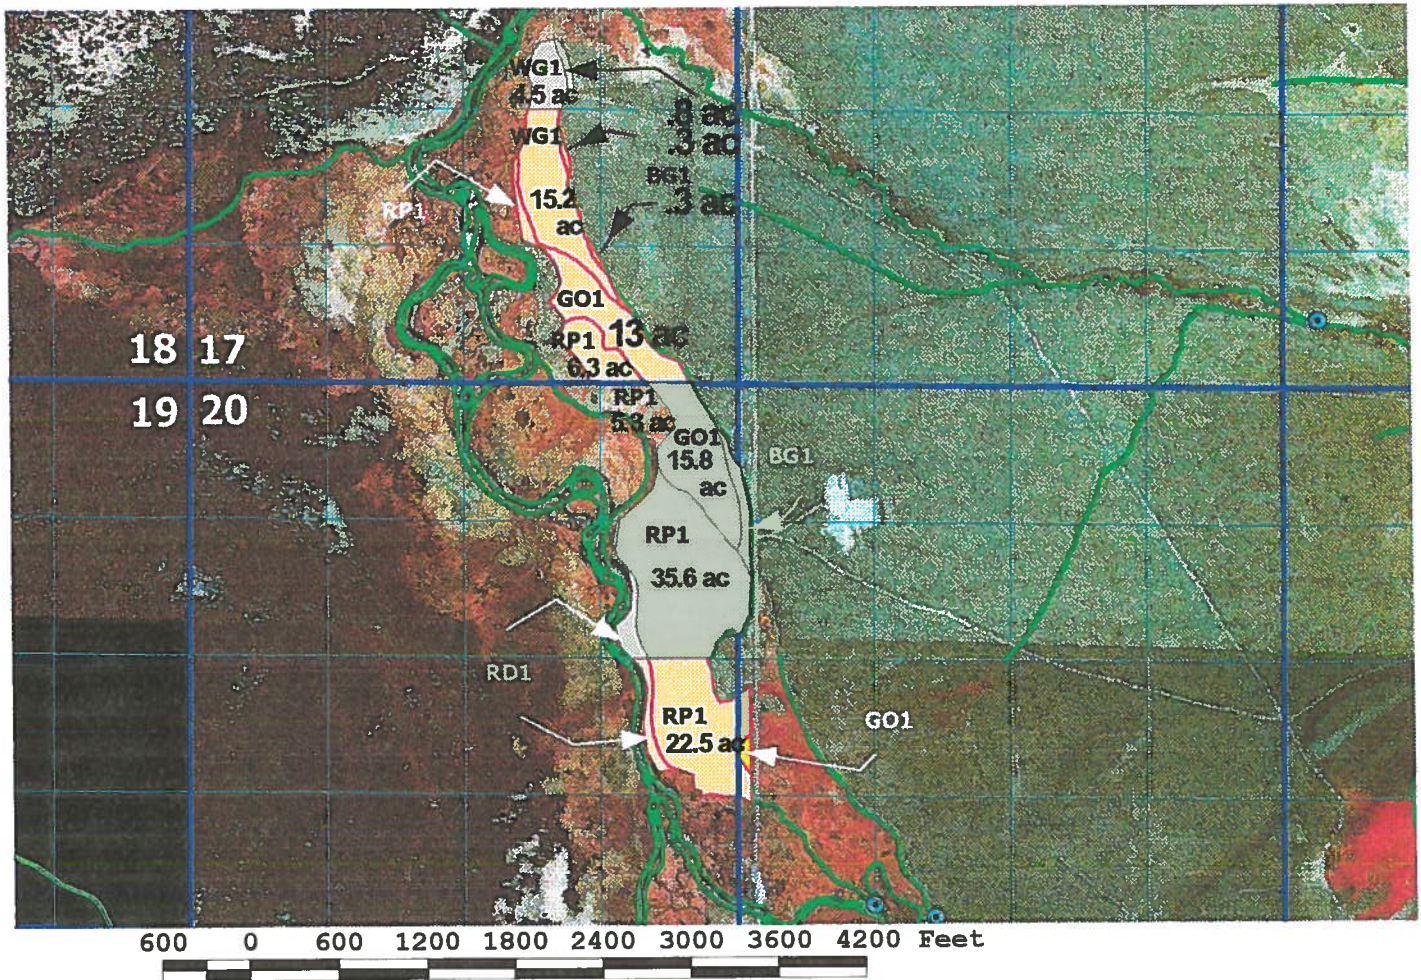

SOIL TYPE	OPTIMAL / ROTATION (chart)	ACTUAL / ROTATION (field)	ACRES PER SOIL TYPE (field)	RATE PER ACRE (chart)	TOTAL DIVERSION RATE
RP1	4.33	10	32	.16	2.22 CFS
GO1	14.66	14.66	15	.04	.60 CFS
WG1	2.66	10	16	.45	1.92 CFS
					<u>4.74</u> CFS

Soil type RD1 not considered as it represents an insignificant portion of P/A & also lay on fringe of recommended P/A.
