RE: Evidence of Priority

RESPONSE DEADLINE

MAY 15, 1992

Dear Claimant:

The Notice(s) of Claim identified with the number shown above your name on the mailing label has been filed in the Snake River Basin Adjudication (SRBA). The Notice(s) indicate your water usage is based on "Beneficial Use" or a "Statutory Claim". Water rights of this type are established by the historical use of water, dating back to when water was first used for the purpose claimed. **The date of first use, known as the priority date, has not been confirmed by a License, Decree or Permit.** The Department will soon conduct reviews &/or field exams for the claims in your area. Since the priority date of a beneficial use water right can not be confirmed by field examination, **proof must be provided supporting the priority date you have claimed.**

The Department will not recommend the Notice(s) be decreed by the court as claimed if no evidence of a priority date is submitted.

Please find enclosed a computer printout of your Notice(s) and the pamphlet entitled **"Evidence of Priority"**. The pamphlet describes the types of evidence required and suggests which documents will fulfill this requirement. I direct your attention to the two sections entitled **"What Kind of Evidence is Required"** and **"Some Examples of Documents Which May Be Evidence of the Priority Date"**.

Please submit the required evidence supporting the priority date(s) by **May 15, 1992**, referencing all documents with the corresponding Notice number(s). If you have any questions not covered by this letter or the enclosed pamphlet, please contact this office.

Respectfully submitted,

Allen Merritt, P.E.
Water Rights Supervisor

On 9/29/93 a polysonic measurement was made of well #1. The measurement was made such that the flow from the well was isolated thru one pipe. Enough spigots were turned on throughout the subdivision such that the pump remained on all the time and the pressure in the system stabilized at approx 35 psi on the gauge. At this point it was felt that the extra reserve in the pressure tanks had discharged and the pump was now operating at its design max. discharge. We measured -608.388 E - 6PM (61 gpm) and Mr. Sanders indicated that the pump was rated @ 62 gpm. That same day well #2 was visited and the piping configuration was such that there was no section of straight pipe where the polysonic could be installed. Well #2 has a meter but it was broken. Since well #2 has the same exact type of pump as well #1 it is reasonable to assume its capacity to be the same since it supplies the same pipeline network. Review of topo map finds that wells very close to same elevation and review of water levels measured by Assoc. indicates drawdown between both wells within 10' of each other (This may be an indication of elevation) well #1 may be approx 10' in elevation below well #2 so the assumption is if they are pumping to from the same water level to the same energy level then the rate would be the same.

MICROFILMED

OCT 27 1994

If the above condition is valid the 61 gpm for both is valid.

If the above worst case is assumed then well #2 would yield approx.

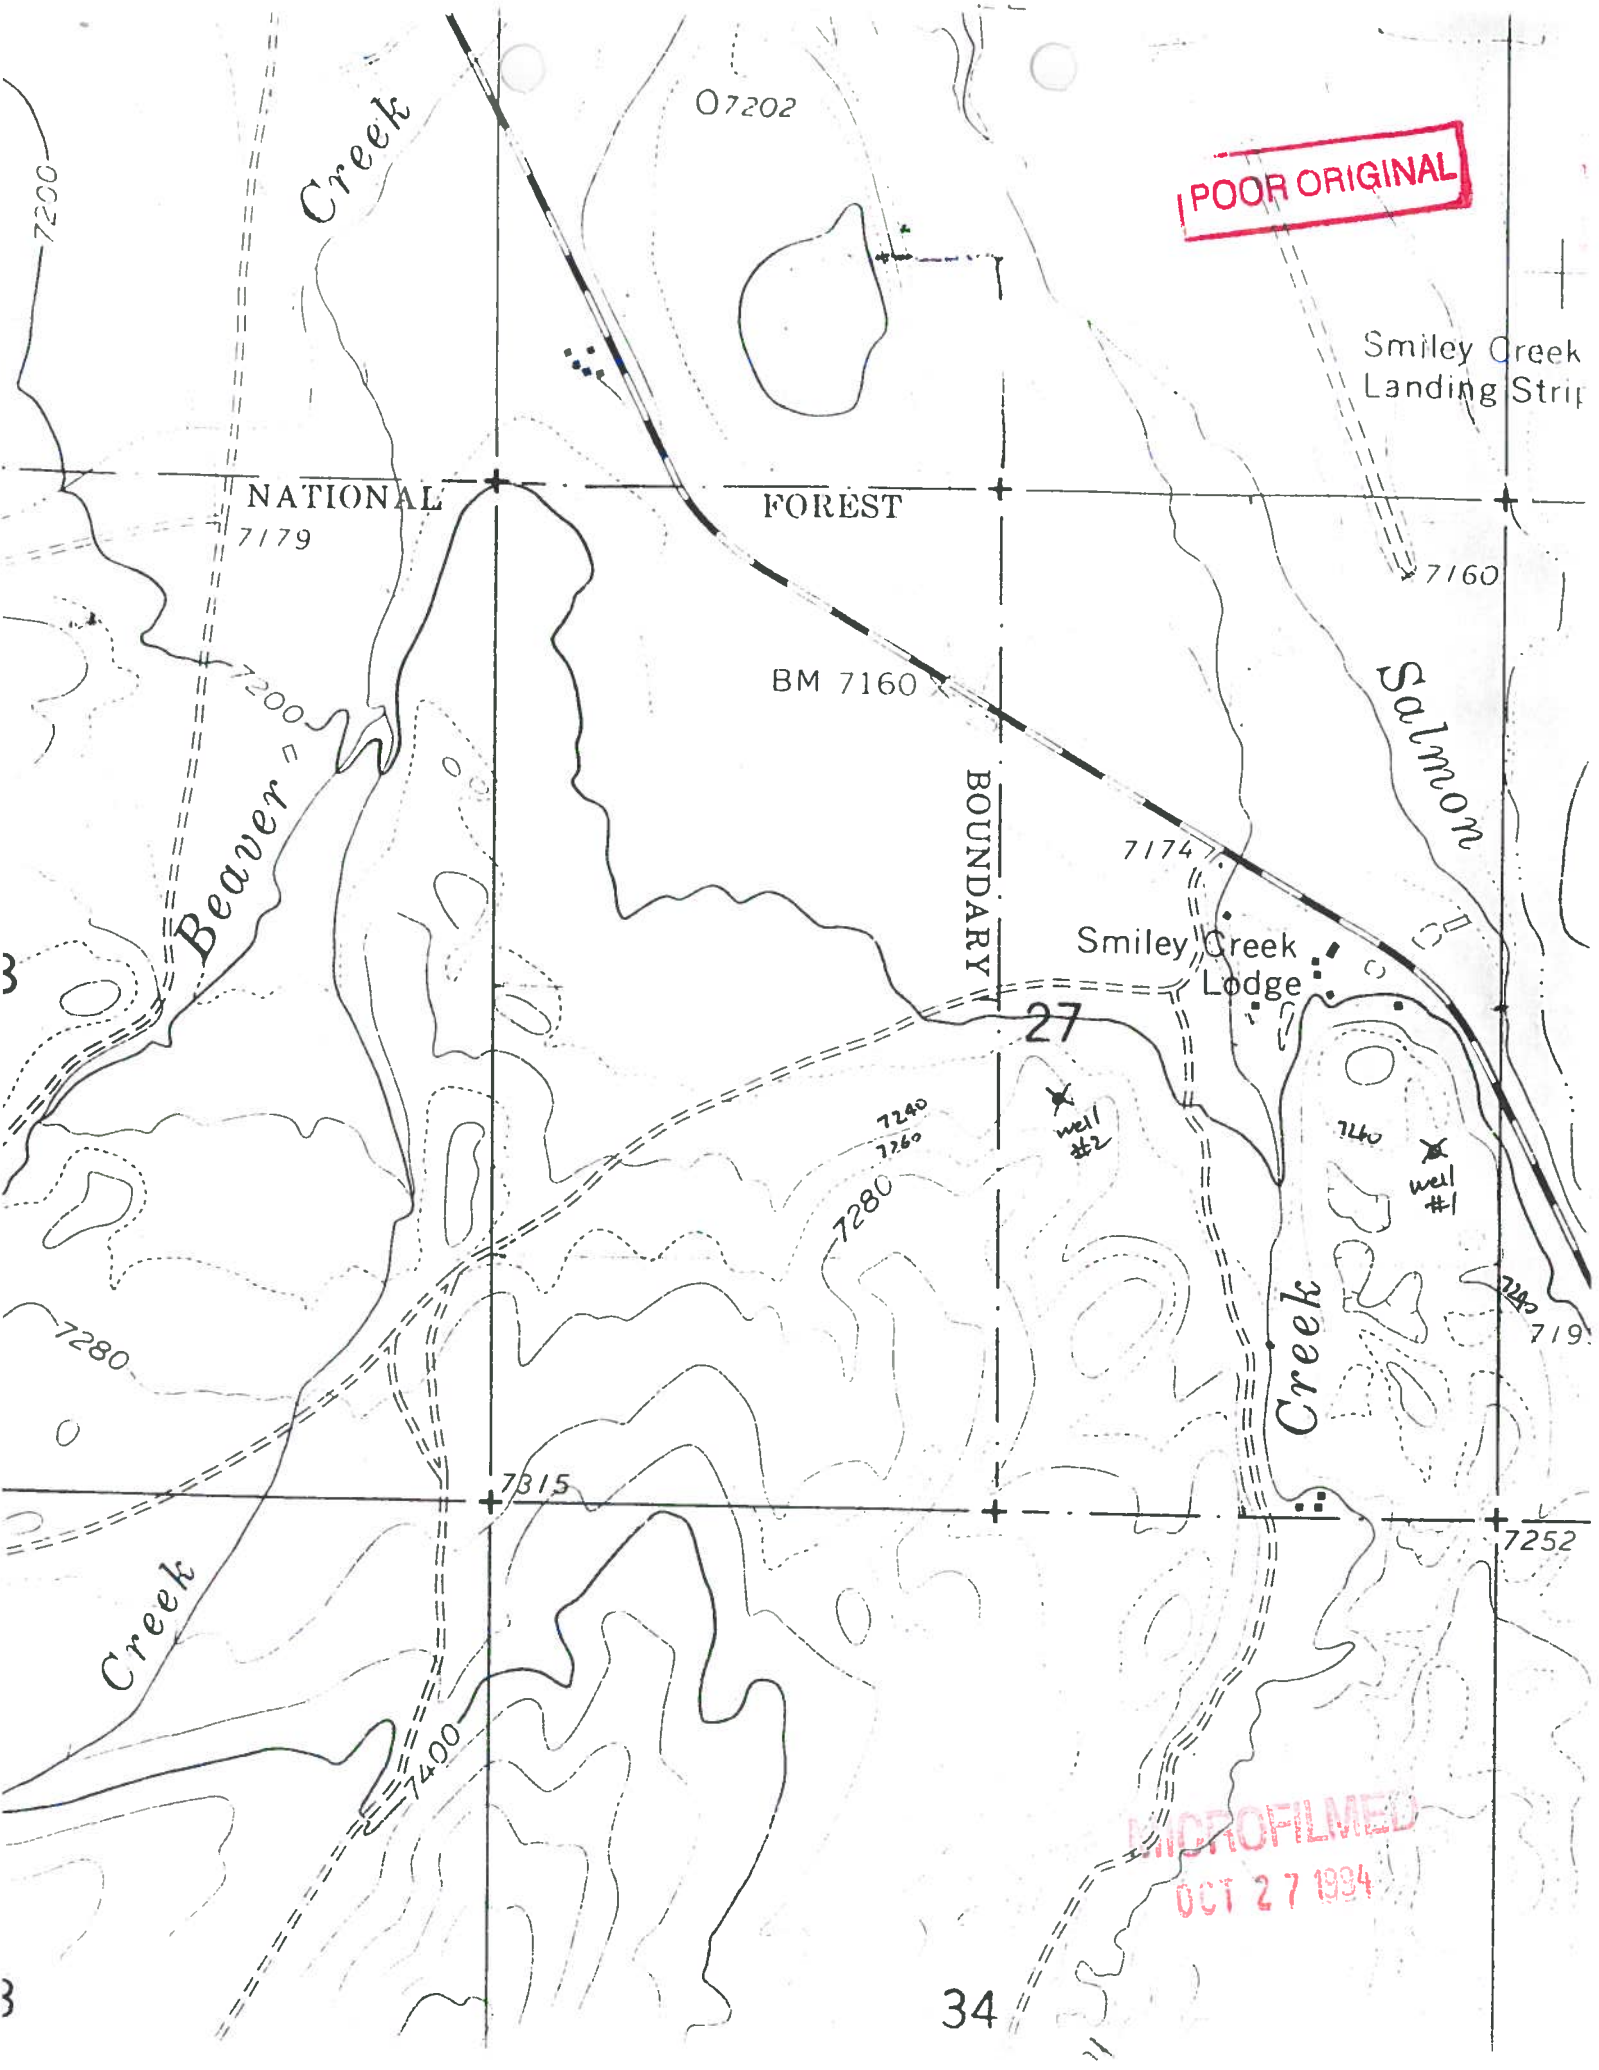

$$\frac{Q_2}{Q_1} = \frac{[(35 \times 2.1) + 77.5]}{[(35 \times 2.1) + 86.7]}$$

$$\therefore Q_2 = 58 \text{ gpm}$$

Since there is no real significant difference it is recommended that the total Q of well #1 + well #2 be recommended as 122 gpm or 0.27 cfs.

SEE ATTACHED SHEET? ☒ YES ☐ NO See below

REMARKS: (Include limitations on CONSUMPTIVE USE for combined rights.)

Domestic for 29 houses. Note houses are recreation in urban and so volume calculated as follows,

Assume (3 people/unit) (365 days/yr) (50 gpd/person) = 2 0.2 AF/unit

325 500 gal/AF.

This seems reasonable since it is 1/3 of standard rate for residence and appears adequate for how the houses are used.

29 house x 0.2 AF/A/house = 5.8 AF/A. div. vol.

50 gpd/person from handbook for single family dwellings - low range
