IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE  
STATE OF IDAHO, IN AND FOR THE COUNTY OF TWIN FALLS

In Re SRBA )  
Case No. 39576 )

Case No. 36-02080

BRIEF IN OPPOSITION TO  
MOTION FOR LEAVE TO FILE LATE OBJECTION

**DESCRIPTIVE SUMMARY**

This brief is filed in objection to the *Motion* of Magic Valley Underground Pumpers Association and its individual members for leave to file a late objection in this subcase. Objection to the *Motion* is supported by the *Affidavit* and attached exhibits submitted herewith.

**ARGUMENT**

Assuming for the purposes of argument that the standard to be used for denying or granting a *Motion to File Late Objections* in the SRBA are Rules 55(c) and 60(b) of the Idaho Rules of Civil Procedure, it is necessary to consider the law as it existed at the time the license was issued, the facts preliminary to the issuance of the license and subsequent thereto, the legal effects of the

of filing thereof, the name and post-office address of the applicant, the source of the water supply, the amount of water to be appropriated, in general the nature of the proposed use, the approximate location of the point of diversion, and the point of use, stating in said notice that any protests against the proof of such application, in form prescribed by the department, shall be filed with the department within forty (40) days from the date of such notice. The Commissioner was required to cause the notice to be served on the applicant and upon such service, the applicant was required to cause the same to be published within ten (10) days from the date of such service in a newspaper printed within the county wherein the point of diversion lies. The notice was required to be published at least once each week for three (3) successive weeks. Any person, firm, association or corporation concerned in any such application could, within the time allowed in the *Notice of Application*, file with the Commissioner a written protest against the approval of such application. A hearing would be conducted upon any protests being received. (See 1967 *Idaho Session Laws*, Chapter 374, showing the language as it existed prior to 1967 amendments.) An application was filed by the United States, no protests were filed opposing the application and the Commissioner forthwith approved the application, finding that it in all respects conformed with the requirements of Chapter 2 of Title 42, Idaho Code, and with the regulations of the Department of

" 3. In connection with permits held by the United States, whether acquired as the original applicant, by assignment or otherwise, the State Reclamation engineer may extend the time for completion of the works for such additional period or periods of time as he may deem necessary upon application supported by a showing that such additional time is required by reason of the status of plans, authorization, construction fund appropriations, constructions, or any arrangements which the Secretary of the Interior or his authorized representative has found to be requisite to completion of the construction of such works. The extension of time for completion of works under this provision shall automatically extend the time for completion of the one-fifth required to be done in half the time, and for making proof of application of water to beneficial use." 1949 Idaho Session Laws, C.127, p.225.

As can be seen, the legislature set no limitation on the additional period or periods of extension which may be granted by the State Reclamation Engineer to the United States. It is also significant to note that there was no provision for third parties to protest an extension nor an opportunity for the permit holder to appeal should the extension be denied.

Until 1967, proof of completion of works and proof of application of beneficial use under a permit were controlled by Sections 42-214 through 42-217, Idaho Code. These sections required that upon receipt of notice from a user of water under a permit that he is prepared to prove that the works have been completed and that they have used such water for the beneficial purpose for which the diversion of such water was intended (which

(See letter and Memorandum of Carl E. Tappan dated January 22, 1964, Exhibits C and D attached to Ling Affidavit.)

Section 42-224, Idaho Code, further provided:

". . . that any one feeling himself aggrieved by the statements contained in the license issued by the department, or the refusal of the department to issue such license, may appeal therefrom to the district court of the county in which the place of use of the water claimed shall be situated. Such appeal shall be taken within sixty (60) days from the date of such license or the refusal to issue such license, and shall be perfected when the appellant shall have filed in the office of the clerk of such district court a copy of the license, . . . , a copy of the protests against the issuing of such license filed with the department, . . ."

No formal protests were filed and a timely appeal was not made to the district court.

On June 10, 1965, the State Reclamation Engineer issued a *License and Certificate of Water Right*, Water License No. 20736, to the United States of America, Bureau of Reclamation, with a priority date of September 9, 1948, authorizing diversion of 1,100 cfs of water for the irrigation of 62,604.3 acres. (Exhibit K attached to Ling Affidavit.) Prior to that date, four separate appeals were filed against the State Reclamation Engineer in the District Courts of Minidoka, Jerome, Lincoln and Blaine Counties, respectively. (Exhibit I to Ling Affidavit.) Each of the appeals was subsequently dismissed on the grounds that the letter of the State Reclamation Engineer was not an appealable license or refusal

binding upon the state as to the right of such licensee to use the amount of water mentioned therein, and shall be prima facie evidence as to such right. Magic Valley Underground Pumpers Association, Inc. has not indicated that it has a defense to the water right established by the license, but attacks the priority in the license. The opportunity to contest the validity of the license has long expired. The Magic Valley Underground Pumpers Association and its members are also barred by the provisions of the Idaho Administrative Procedure Act (IAPA). Section 67-5270, Idaho Code, provides that judicial review of agency actions shall be governed by the provisions of that chapter unless other provisions of law are applicable to the particular matter. To obtain judicial review under the IAPA, the requirements of Section 67-5271 through 67-5279, Idaho Code, must be complied with. Section 67-5273, I.C., provides that a petition for judicial review of final agency action must be filed within twenty-eight (28) days of the agency action, except as provided by other provision of law. It is clear that judicial review of the issuance of the license under IAPA has long expired. Had review been allowed under IAPA, the scope of the review would be controlled by Section 67-5279, I.C. Under this section, the court may not substitute its judgment for that of the agency as the weight of the evidence on questions of fact. It is also clear that the Magic Valley Underground Pumpers Association and its members may not seek a review of the

County Commissioners of Arapahoe, 692 P.2d 1106 (Colo. 1984). The action before the court was for declaratory and injunctive relief on the grounds that the Board of County Commissioners had acted in excess of its power which involved actions quasi-judicial in nature. The court noted the statutory requirement that such quasi-judicial actions must be appealed pursuant to C.R.C.P. 106(b). Noting that the gravamen of the complaint was that the Board had proceeded in excess of its jurisdiction, and that such review was cognizable under C.R.C.P. 106(a)(4), it held that the action therefore must be filed within the 30-day period provided by C.R.C.P. Then noting that the complaint had not been filed within that time, the court held that the failure to do so was a jurisdictional defect and the failure of the sheriff to bring the action within the requisite time period deprived the district court of subject matter jurisdiction. The court further noted that the sheriff "may not seek to accomplish by declaratory judgment what [he] can no longer accomplish directly under C.R.C.P. 106(a)(4) . . . ." The Court of Appeals of Idaho reached a similar opinion in Fox v. Boundary County Board of Commissioners, 114 Idaho 940, 763 P.2d 313 (Id.App. 1988).

There are other legal principles which deny to the Magic Valley Underground Pumpers Association, Inc. and its members the right to relitigate the issuance of the license by the Reclamation Engineer in this case. The moving parties are barred by the

finality. Thus, once an administrative order becomes final, the administrative decision of an adjudicatory character binds the parties to the proceeding and is res judicata, thereby precluding a subsequent judicial proceeding between the same parties regarding the matters litigated in the administrative action.

Res judicata bars relitigation not only of matters determined in a previous adjudication but also matters that a party could have raised."

This general legal principle is fully applicable in this case, and forecloses the moving parties from asserting that they have a defense to the water right recommended to the United States pursuant to the license. All of the parties seeking to file the late objection, if they have any standing, must have either been present at the time of the publication of the proof to be submitted for the issuance of the license, or the preceding owners of their water rights were present. They had the opportunity to raise the issues by filing a *Verified Protest* (sworn statement) or by seeking a court review of the issuance of the license, within the statutory provisions then existing. They may not now wait thirty (30) years and seek to relitigate those matters.

There is no question that the issuance of the license by the Reclamation Engineer was a final decision. There is no question that notice was given to the public by publication as to the proof that was to be presented to the Reclamation Engineer for the issuance of the license. Finally, there is no question that no formal protests were submitted to the Reclamation Engineer to

LING, NIELSEN & ROBINSON

RUPERT, IDAHO 83350

1  
2  
3 are seeking relief from the license. Under Rule 60(b), I.R.C.P.,  
4 assuming one can ignore the statutory provisions for review, they  
5 would be required, to set aside or obtain relief from the license,  
6 to commence action within six (6) months, and at the most, one (1)  
7 year after the license was issued. For these reasons, there is no  
8 meritorious defense available nor has one been presented. It is  
9 also submitted that allowing the filing of a late objection would  
10 be prejudicial to A & B Irrigation District and the United States.  
11 It is immaterial as to whether or not each member of the Magic  
12 Valley Underground Pumpers Association was aware of the proceedings  
13 which gave rise to the issuance of the license. They or their  
14 predecessors in interest who would have standing to question the  
15 priority date of the license had notice of the proof that was to be  
16 presented to obtain a license by the United States, and numerous  
17 members of Magic Valley Underground Pumpers Association were  
18 involved in the filing of informal protests or attempting an appeal  
19 of the decision to issue the license. It is not sufficient for the  
20 members of the Association to allege that they may not have even  
21 been born at the time the license was issued. Unless they have a  
22 water right that would be affected by a change in the priority of  
23 A & B Irrigation District, they have no standing to file an  
24 objection. If they have such a water right, their predecessors in  
25 interest had the knowledge required to file an objection, and such  
26 knowledge is imputed to the members of the Association.

the license and its priority date. For one to assert that he had no knowledge as to the events because they were not born at the time does not grant them the opportunity to contest those proceedings based upon any legal premise.

**CONCLUSION**

It is respectfully submitted that the *Motion to File a Late Objection* by the Magic Valley Underground Pumpers Association should be denied and overruled in all respects on the grounds and for the reasons that the moving parties have failed to establish that they have a meritorious defense to be raised by the filing of an objection and that the filing of an objection at this time would be prejudicial to the rights of A & B Irrigation District.

Respectfully submitted this 16th day of June, 1995.

May 1, 1964

1 MEMORANDUM FOR THE IDAHO STATE RECLAMATION ENGINEER CONCERNING WATER FILINGS  
2 FOR THE NORTH SIDE PUMPING DIVISION, UNIT B, MINIDOKA PROJECT, IDAHO

3 The United States of America, acting through the Bureau of Reclamation,  
4 and for the ultimate benefit of citizens of Idaho who obtained homesteads on  
5 this reclamation project made a water filing under the State Water Code for  
6 this project. The application was filed with the Idaho State Reclamation  
7 Engineer on September 9, 1948, and was approved on November 9, 1948. This  
8 filing was for 1333.2 cubic feet per second of public waters of the State of  
9 Idaho to be developed from an underground source of water found to exist in  
10 the area. Some questions have been raised concerning the approval of proof of  
11 completion of works and the application of water to beneficial use filed in  
12 connection with this filing. There is no argument that the project has been  
13 completed and that a water supply for 637 irrigated farms in Unit B has been  
14 developed for the homesteaders now residing on the project. In order to  
15 support the issuance of the water right license, the following facts and  
16 discussions of the questions raised are offered. As is clearly shown by this  
17 memorandum, not only is the State Reclamation Engineer authorized by law to  
18 issue a water right license for the project with a priority of September 9,  
19 1948, but also such action is required under the pertinent Idaho water laws,  
20 is in keeping with the representations made by the state to the Congress to  
21 obtain construction of the project, is consistent with the basis upon which  
22 the settlers homesteaded the project lands, and is not in conflict with or  
23 prejudicial to any other Idaho water users. Conversely, the failure to issue  
24 a water right license for the project with a priority of September 9, 1948  
25 would be contrary to the intent of the legislature, would be prejudicial to  
26 the resident owners of the farms on the project who are the beneficiaries of  
27 the project water rights, and would not be detrimental to any non-project  
28 water users since no such non-project users formally appeared in the proceeding  
29 after repeated formal publications and announcements of the opportunity so to  
30 do. Thus, it is believed that this memorandum fully supports our position  
31 that a license should be issued with a priority date of September 9, 1948.

32

1 Background Information

2 The public land area which has now been developed as the North Side Pump-  
3 ing Division is composed entirely of public lands and is an area which has had  
4 a long history of contemplated development as a Federal reclamation project.  
5 A large area of public land, including the area included in the North Side  
6 Pumping Division, was withdrawn for reclamation development as the Minidoka  
7 Federal reclamation project shortly after the authorization of the reclamation  
8 program in 1902. From the outset, the area was proposed to be developed along  
9 with the other lands in the Burley-Rupert area as various divisions of a major  
10 project development known as the Minidoka Project. The initial area is within  
11 the Minidoka Irrigation District, is served by gravity from Minidoka Dam, and  
12 is known as the Gravity Division. The lands on the south side of the river  
13 were developed by pumping from the river, are in the Burley Irrigation  
14 District, and are known as the South Side Pumping Division.

15 The first storage reservoir built on Snake River is Jackson Lake and this  
16 reservoir contained additional capacity intended to be used for the development  
17 of the public lands in the Minidoka Project area. However, this additional  
18 capacity was made available during the water-short years preceding the 1920's  
19 as a supplemental source of supply to already developed lands diverting above  
20 American Falls. Thereafter, the American Falls Reservoir was built in the  
21 1920's with sufficient capacity to provide water for the development of the  
22 North Side pumping area. Again, however, the water shortages of the 1930's  
23 showed the need for the use of the excess capacity in American Falls as a  
24 source of supplemental water supply for existing lands already developed.  
25 And, the water in American Falls was leased to the various canal companies and  
26 irrigation districts then developed in the Snake River area diverting above  
27 Milner Dam. Plans to develop the North Side pumping area were continued to  
28 be urged upon the Bureau by the various interests in the Minidoka-Rupert-Burley  
29 area and the plans to accomplish this grew out of the authorization of the  
30 next major storage reservoir in the Upper Snake River Basin, that being the  
31 Palisades Project. The basic plan was that the larger part of the leased  
32 space in American Falls Reservoir would be made permanently available to the

1 existing canal and irrigation districts. The remainder of the American Falls  
2 Reservoir capacity, supplemented by new storage at Palisades was set aside for  
3 a portion of the Minidoka North Side Pumping Division. This plan limited the  
4 size of the North Side Pumping Division area that could be served direct from  
5 the Snake River. This limited area is known as Unit A of the North Side Pump-  
6 ing Division. The remaining portion of this withdrawn public land area in the  
7 North Side Pumping Division area was to be developed in common with the Unit A  
8 area but was to be served from ground water. This basic plan was made part of  
9 the legislative history and incorporated into the bill which authorized  
10 Palisades Reservoir and the North Side Pumping Division. Thus, it can be seen  
11 that the various interests in the Snake River Basin comprising Water District  
12 No. 36 have long recognized the merits of the North Side Pumping Division area  
13 development and that development has been in contemplation over a long period  
14 of years.

15 The foregoing matters were the subject of much public discussion, were  
16 widely reported in the press of the local area and of the state at large, were  
17 officially announced in correspondence, and in presentations to the Congress  
18 and to state governmental officials. The information was readily available to  
19 landowners in the Minidoka-Rupert area who were seeking a source of water for  
20 private lands.

#### 21 Authorization of the Project

22 The North Side Pumping Division was authorized by the Act of September 30,  
23 1950, 64 Stat. 1083. This act in section 2 specifically authorized the project  
24 to be constructed and operated under the Federal Reclamation Laws in accord  
25 with the Commissioner of Reclamation's report adopted by the Secretary of the  
26 Interior on July 1, 1949, except for express modifications made in that report  
27 by the Congress, which are not pertinent here. In accordance with the provi-  
28 sions of the Flood Control Act of 1944, the Commissioner's report was circu-  
29 lated before presentation to the Congress to the various state governments for  
30 review and comment. The State of Idaho, acting through Governor Robins,  
31 reviewed the report and by letter dated August 1, 1949, on behalf of the State  
32 of Idaho, said:

1 "This project has been a part of the over-all planning  
2 for nearly 45 years largely because it was, even thus early,  
3 recognized that the lands involved were, by the reason of  
4 their fertility, climate, and situation and topography, well  
5 suited to intensive agricultural use.

6 "The project, in its major portion, will make beneficial  
7 use of Idaho's subterranean waters available in the area as  
8 demonstrated by the great amount of investigation work done  
9 by the Bureau. Developed by individual units as planned,  
10 there should be no deleterious effect on the subterranean  
11 water supply, since continuing studies by the Bureau will  
12 keep check on this feature.

13 "Referring again to history, when 500,000 acre-feet of  
14 American Falls Reservoir space was reserved for this project,  
15 it was naturally implied that as and when the development was  
16 feasible the obligation would be met.

17 "For the above reasons and since new irrigated land in  
18 Idaho is in demand and since there is presently none being  
19 developed elsewhere exclusively for veterans, this project  
20 has the hearty approval of Idaho."

21 Moreover, the report as reviewed by the State of Idaho, contained this  
22 material under the heading "Plan of Development":

23 "Unit B, with an irrigable area of 64,000 acres, will  
24 be served, as indicated earlier, with water pumped from wells.  
25 The wells, to be drilled at strategic points, will have an  
26 estimated range in capacity from 2 to 6 cubic feet per second  
27 and an average static lift of 200 feet. An estimated 309  
28 wells will be required. From each well, small lateral systems  
29 will distribute water to several farms. Other facilities  
30 include a system of drainage wells, and 21 observation wells  
31 from which data can be obtained on regional water table fluctu-  
32 ations.

"Gradual development of Unit B over a period of 11 years  
is proposed in order to assure that the demands progressively  
placed upon the ground-water supply can be met satisfactorily."

The foregoing matters are of public record in House Document No. 721, 81st  
Congress, 2d session, the letter of Governor Robins appearing at page 7, and  
the discussions of the plan of development appearing at page 58. Attention is  
called to the fact that the "Plan of Development" section of the report as  
reviewed by the state indicated a development period of 11 years was proposed.

Moreover, in connection with the Congressional consideration of the  
authorization of the North Side Pumping Division, Mr. R. P. Parry of Twin Falls,  
Idaho, was asked by Governor Robins to appear on behalf of the State of Idaho  
at the hearings of the Subcommittee on Irrigation and Reclamation of the  
Committee on Public Lands, House of Representatives. In connection with making

1 a presentation in support of the early authorization and construction of the  
2 project, Mr. Parry made the following statement in August of 1949 to the  
3 Congress with respect to the Idaho state water rights that would be available  
4 for the North Side Pumping Division:

5 "Mr. Parry. I believe that has been taken care of by  
6 the Bureau in this case as explained by Mr. Stinson yesterday.  
7 The Bureau made one blanket filing for all the wells that will  
8 be in this project to supply this body of Government land, and  
9 it would be my opinion that those wells would all be of equal  
10 priority there and that all of the men in there would have an  
11 equal right to a proportionate share of water out of this under-  
12 ground stream, which happens, according to geologists, to be  
13 really a definite stream flowing with an ascertainable current  
14 and flowing a large amount of water, because when we dry up the  
15 Snake River in the drought season at Milner Dam where we divert  
16 water for the two sides of the river, Twin Falls and Jerome, in  
17 the next 60 miles some 5,000 second-feet of water reappear even  
18 in the dryest season. That has to come from this underground  
19 stream." (Hearings before a Subcommittee on Irrigation and  
20 Reclamation of the Committee on Public Lands, House of Repre-  
21 sentatives, and a Special Subcommittee of the Committee on  
22 Interior and Insular Affairs, United States Senate, Eighty-  
23 First Congress, First Session on H.R. 5506, page 88).

15 The joint committees of the Congress holding hearings on the authorization of  
16 the North Side Pumping Division were interested in the water rights for the  
17 project, and at their request a statement was inserted in the record as  
18 follows:

19 "The committee understands that water filings with  
20 respect to underground water for unit B of the north side  
21 pumping division have been made by the United States with  
22 the State of Idaho pursuant to the provisions of section 8  
23 of the act of June 17, 1902 (32 Stat. 383), and that as  
24 waters are developed through the well program the rights  
25 thereto will become appurtenant to the lands on which benefi-  
26 cial use is established. The committee has been told  
27 that, while the United States will continue to have an  
28 interest in the water rights according to these filings,  
29 the beneficial ownership of those rights will be in the  
30 water users organizations subject to defeasance only for  
31 breach of repayment arrangements." (Hearings before a Sub-  
32 committee on Irrigation and Reclamation of the Committee on  
Public Lands, House of Representatives, and a Special Sub-  
committee of the Committee on Interior and Insular Affairs,  
United States Senate, Eighty-First Congress, First Session  
on H.R. 5506, page 186).

29 In keeping with these understandings, the Committee on Public Lands of  
30 the House of Representatives in reporting favorably on H.R. 5506, the bill  
31 which was adopted authorizing the Palisades Project and the North Side Pumping  
32 Division Project, included these words in its report (House of Representatives

1 Report No. 1297, Eighty-First Congress, First Session, August 22, 1949, at  
2 page 3):

3 "The bill will authorize the development of unit B of  
4 the north side pumping division through the drilling of deep  
5 wells. This is a novel undertaking under the Federal reclama-  
6 tion law and raised considerable question concerning the handl-  
7 ing of water rights. The committee understands that water  
8 filings with respect to underground water for unit B of the  
9 north side pumping division have been made by the United States  
10 with the State of Idaho pursuant to the provisions of section 8  
11 of the act of June 17, 1902 (32 Stat. 338), and that as waters  
12 are developed through the well program the rights thereto will  
13 become appurtenant to the lands on which beneficial use is es-  
14 tablished. It is understood that the beneficial ownership of  
15 the water rights according to these filings will be in the water  
16 users subject to defeasance only for breach of repayment arrange-  
17 ments."

18 Congressman Sanborn of the Second Idaho Congressional District was a member of  
19 the committee at the time.

20 Thus, it is clear from the legislative history of the authorization of  
21 the North Side Pumping Division that state representatives advised the Congress  
22 that state water rights with a common priority of September, 1948, would be  
23 established for the veterans who were to homestead the public lands involved,  
24 and that there would be one blanket water right for all wells involved.

#### 25 Timely Project Construction Has Been Accomplished

26 With the authorization of the project in the fall of 1950 by the Congress,  
27 construction of the project was undertaken. In keeping with well known and  
28 established legislative procedures, presidential budget requests are submitted  
29 to the Congress, open public hearings are held by the Congressional committees,  
30 and the Congress authorizes appropriations in accordance with its findings on  
31 the recommendations presented to it. These programs were made known to, and  
32 voted on, by the Congressional delegation of Idaho, and were public knowledge  
to the state and local officials and other citizens generally. There was ample  
opportunity for anyone desiring a more rapid rate of development to have  
presented his point of view to the Congress. The record discloses no presen-  
tation on behalf of the government of the State of Idaho for a more rapid con-  
struction of the project. The Congress appropriated funds for the construction  
of the project according to the following tabulation:

	<u>Fiscal year ending July 1</u>	<u>Amount</u>
1		
2	1950	\$ 527,500
	1953	150,000
3	1954	953,612
	1955	1,898,891
4	1956	1,963,000
	1957	2,768,000
5	1958	1,475,000
	1959	316,000
6	1960	797,550
	1961	320,000
7	1962	205,000
	1963	134,619
8	1964	68,658

9 Appropriations for fiscal years 1951 and 1952  
10 were not made due to the Korean War.

11 Under the program of project construction adopted by the Congress, public  
12 notices were issued throughout the United States inviting veterans of the armed  
13 forces who were qualified farmers to draw and seek an opportunity to obtain a  
14 homestead on the project. An unusually large number of veterans availed them-  
15 selves of the opportunity to do so. As a result of public drawings and the  
16 screening of proposed settlers by a local board of interviewers, the veterans  
17 selected and their families were required to settle on the project and estab-  
18 lish homes and develop the farms. The following tabulation shows the number  
19 of farm units and the years in which the settlers arrived on the project:

	<u>Number of Farm Units</u>	<u>Date of Entry</u>
20		
21	72	1953
	85	1954
22	94	1955
	194	1956
23	143	1957
	35	1958
24	14	1961

25 Thus, a total of 637 farms were made available for settlement and were settled  
26 in a seven-year period.

27 Meantime, the portion of the project to be developed by diversion of water  
28 on the Snake River, known as Unit A, was approved for a state water right under  
29 permit No. 26216. Governor Smylie approved this permit on February 29, 1956,  
30 with a time for completion of works of March 5, 1961, but with proof of bene-  
31 ficial use of water being required no sooner than March 1, 1971.

32

1 In view of the foregoing, it appears fully supported that the development  
2 of the project has been as rapid as is reasonably possible, considering the  
3 large-scale investment involved, the number of people involved, and other  
4 settlement and public problems concerned. The development program is consistent  
5 with the eleven-year period estimated in the project plan contained in the  
6 report reviewed and approved by the Governor of Idaho by his letter of August 1,  
7 1949.

8 Status of So-Called Objectors

9 The statutory procedure for obtaining a water certificate provides for  
10 publication of the notice of the initial filing of an application for permit,  
11 42-203 Idaho Code. This was done in connection with the water right permit for  
12 the North Side Pumping Division and no one filed a protest. Under the pro-  
13 visions of 42-203 Idaho Code any private landowner could have done so. The  
14 legislature has provided no requirement for the publication of notice or the  
15 filing of a protest or a procedure for a hearing relating to a request of a  
16 permit holder for an extension of the time to complete his project. Moreover,  
17 the legislature has provided that a notice shall be published when construction  
18 of a project is completed. The law also requires notice of proof of the  
19 application of water to a beneficial use of the project. Sections 42-214 and  
20 42-217 Idaho Code. These notices were published in connection with the issued  
21 permit applicable to the North Side Pumping Division, but no duly or properly  
22 verified protests were filed with the Idaho State Reclamation Engineer's office  
23 as is required by these statutes. Moreover, no person appeared at the time and  
24 place set in the published notice for the taking of proof to make any protest  
25 or make any statements.

26 In these circumstances, the holder of the issued water right permit who  
27 has (1) paid the required fees to the state for the permit, (2) published the  
28 required public notices, (3) complied with the required proof taking procedure  
29 established by law, and (4) provided the required verified statements as re-  
30 quired by law, is entitled to have the proof accepted on the basis of the  
31 record made in accordance with the statutory procedures. Matters raised out-  
32 side the record cannot properly be considered by the state official charged

1 with the responsibility of taking the actions with respect to the completion  
2 of an issued water right permit.

3 On the other hand, none of the persons objecting to the issuance of a  
4 water right license with a priority of September 9, 1948, would be prejudiced  
5 by the issuance of the water right license with such a priority, since it  
6 would give them the opportunity to appeal the decision if they so desired, and  
7 it is appropriate that these persons be required to bear the burden of the  
8 expense of any such appeal, rather than the developers and settlers of the  
9 project who have met all the expenses of proceeding with the processing of  
10 the water right application and of developing the project itself.

11 Applicable Appeal Procedures

12 It has been suggested that the permit holder was required to appeal from  
13 the decisions of the State Engineer which failed to approve the applications  
14 of the permit holder for an extension of time to complete the project works  
15 and submit the proofs of completion of works and of the application of water  
16 to a beneficial use. And the failure of the permittee to so appeal within 60  
17 days after the issuance of the State Engineer's decision is suggested as being  
18 binding upon the permit holder.

19 There is no support for this suggestion in the state water code.

20 The Idaho legislature has not required a water right permit holder to  
21 appeal from each intermediate procedural action taken by the State Engineer in  
22 processing a validly granted water right permit through to the issuance of a  
23 water right license. An interpretation that would require an appeal from each  
24 intermediate decision in the administrative process in connection with the  
25 perfecting of a state water right does violence to the applicable statutes and  
26 would place an undue burden of untimely litigation on the courts and on permit  
27 holders who have in good faith proceeded to invest funds in the development of  
28 a water project in reliance on a water right permit.

29 The only statutory provision which could possibly require a permit holder  
30 to appeal in the circumstances involved with respect to the water right permit  
31 for the North Side Pumping Division is section 42-204 Idaho Code as amended,  
32

1 which statutory provision was cited in Mr. Kulp's decision of April 5, 1956.

2 But consider the language of this section as applied to the duty to appeal.

3 "The approval of an application shall be endorsed thereon,  
4 and a record made of such endorsement in the Department of  
5 Reclamation. The application so endorsed shall constitute a  
6 permit and shall be returned to the applicant, and he shall  
7 be authorized, on receipt thereof, to proceed with the con-  
8 struction of the necessary works for the diversion of such  
9 water, and to take all steps required to apply the water to a  
10 beneficial use and to perfect the proposed appropriation." . . .

11 "Any applicant feeling himself aggrieved by the endorse-  
12 ment made by the Department of Reclamation upon his application  
13 may appeal therefrom to the district court of the county in  
14 which the point of diversion of the proposed appropriation  
15 shall be situated. Such appeal shall be taken within sixty  
16 days from the return of the application by the Department of  
17 Reclamation, and shall be perfected when the applicant shall  
18 have filed in the office of the clerk of such district court  
19 a copy of the application, certified by the Department of  
20 Reclamation as a true copy, together with the petition to such  
21 court, setting forth the appellant's reason for appeal. Such  
22 appeal shall be heard and determined upon such competent proof  
23 as shall be adduced by the appellant, and such like proof as  
24 shall be adduced by the Department or some person duly author-  
25 ized in its behalf." (Emphasis supplied.)

26 This language clearly applies to situations in which an applicant for a water  
27 right permit is issued a permit with endorsements thereon with which the  
28 applicant is dissatisfied. He then can appeal and have his complaint decided  
29 judicially before the applicant proceeds to invest money in reliance on an  
30 issued water right permit. This procedure obviously is a sound one. In the  
31 situation involved on the North Side Pumping Division, however, the matter of  
32 concern is not the endorsement on the application for a permit, rather, it is  
the proper determination of the time established by statute to complete the  
project and make proofs of completion and of beneficial use of the water after  
the persons involved are no longer applicants for a permit but are holders of  
an issued permit and after the permit holder has undertaken the construction  
of the project and there are established settlers on the project utilizing the  
water. In the absence of a statutory directive to a water right permit holder  
to prosecute an appeal to the courts, a permit holder is not required to so  
prosecute an appeal concerning each administrative action of the State  
Engineer in connection with the procedural steps necessary to secure a water  
right license. To do so would lead to a multiplicity of suits, would unduly

1 burden not only the courts and the administrative process of the State  
2 Engineer's office, but would also greatly inconvenience the holder of the  
3 issued water right permit.

4 The Permit Holder Has Proceeded Within the Times  
5 Required by Statute and is Entitled to the  
6 Issuance of a Water Right License

7 The statute governing the limitation of time for the completion of project  
8 construction by a water right permit holder and the submitting of the proofs  
9 of such completion and the proofs of application of water to a beneficial use  
10 is 42-204 Idaho Code as amended. In pertinent part, this statute reads as  
11 follows:

12 "In its endorsement of approval on any application the  
13 department shall require that actual construction work shall  
14 be complete within a period of five years from the date of  
15 such approval, and that one-fifth of such work of construction  
16 shall be done within one-half the period of time allowed for  
17 the completion of such works but may limit the application to  
18 a less period of time for the completion of such works than is  
19 asked for, and likewise the perfecting of the proposed right  
20 for a less period than is named in the application, and such  
21 endorsement shall give the date when such work shall be com-  
22 pleted, also the date when beneficial application of the water  
23 to be diverted by such works shall be made for the purposes  
24 intended; Provided that:

25 "1. In cases where the applicant is prevented  
26 from proceeding with his work by his failure to obtain  
27 necessary consent or final approval or rejection from  
28 the federal government because of the pendency of an  
29 application for right of way or other matter within the  
30 jurisdiction of the United States, or by litigation of  
31 any nature which might bring his title to said water in  
32 question, the department of reclamation upon proper  
showing of the existence of any such condition, and being  
convinced that said applicant is proceeding diligently  
and in good faith, shall extend the time so that the  
amount of time lost by such delays shall be added to the  
time given in the original permit for each and every  
action required.

"2. The time for completion of works under any  
permit involving the construction of a reservoir of more  
than 200,000 acre feet capacity or for the appropriation  
of water to be impounded in such reservoir of more than  
200,000 acre feet capacity, or a diversion of more than  
25,000 acre feet in one (1) irrigation season for a  
project of no less than 5,000 acres, may upon application  
to the state commissioner of reclamation supported by a  
showing that additional time is needed on account of the  
time required for organizing, financing, and constructing  
works of such large size, be extended by the state commis-  
sioner of reclamation for an additional period of seven  
(7) years, but not to exceed twelve (12) years in all from  
the date of permit, and that extension of time for comple-  
tion of works under this proviso shall automatically extend

1 the time for completion of the twenty per cent (20%)  
2 required to be done in half (1/2) the time, and for  
3 making proof of application of water to beneficial  
4 use: Provided, that no such extension shall be granted  
5 unless the applicant for such extension shall show that  
6 there has been actually expended toward the construction  
7 of said reservoir or diversion (including expenditures  
8 for the purchase of rights of way and property in con-  
9 nection therewith) at least \$100,000.

10 "3. In connection with permits held by the United  
11 States, whether acquired as the original applicant, by  
12 assignment or otherwise, the state reclamation engineer  
13 may extend the time for completion of the works for such  
14 additional period or periods of time as he may deem nec-  
15 essary upon application supported by a showing that such  
16 additional time is required by reason of the status of  
17 plans, authorization, construction fund appropriations,  
18 construction, or any arrangements which the secretary  
19 of the interior or his authorized representative has  
20 found to be requisite to completion of the construction  
21 of such works. The extension of time for completion of  
22 works under this provision shall automatically extend  
23 the time for completion of the one-fifth required to be  
24 done in half the time, and for making proof of application  
25 of water to beneficial use."

26 In the situation with respect to the water right permit for the North Side  
27 Pumping Division, (1) the pace of progress of construction of the project  
28 works was a matter within the jurisdiction of the United States acting through  
29 the Congress, (2) the project involves the diversion of more than 25,000 acre-  
30 feet of water in one irrigation season on a project of more than 5,000 acres  
31 with an expenditure in excess of \$100,000 having been made towards construction,  
32 and (3) the holder of the permit is the United States acting through the  
33 Secretary of the Interior pursuant to the Federal Reclamation Laws. On the  
34 basis of these facts, it is clear that the North Side Pumping Division fits  
35 into each one of the three exceptions made by the legislature to a time period  
36 of five years for the construction of the works under a water right permit.

37 Attention is called to the fact that numbered exception 1 specifically  
38 states that the Department of Reclamation upon the proper showing of the  
39 existence of the conditions specified in the exception and being convinced  
40 that the applicant is proceeding diligently and in good faith, "shall extend  
41 the time so that the amount of time lost by such delays shall be added to the  
42 time given in the original permit in each and every action required. Thus,  
43 this language makes an extension mandatory upon the State Reclamation Engineer.

1 It is recognized that numbered exception 2 was made applicable by amend-  
2 ment of that provision into the above-quoted form by legislative enactment in  
3 1963. Again, however, this shows that the legislature intended that large-  
4 scale projects such as the North Side Pumping Division should be allowed  
5 sufficient time to accomplish the development of the project, having in mind  
6 the fact that completion of a large project does require more time than a small  
7 individual project.

8 Most importantly, however, it is quite clear that under any interpretation  
9 of the language of numbered exception 3, the North Side Pumping Division  
10 qualifies for an extension of time. No showing could possibly be made that  
11 the project does not clearly come within this legislative direction for an  
12 extension of the time for completion of the construction of project works.

13 The Legislative History of Idaho Water Laws  
14 Supports the Validity of the Permits

15 At the 1949 session of the Idaho legislature, specific action was taken  
16 by the legislature to adjust the Idaho state water right procedures as applied  
17 to the projects authorized by the Act of September 30, 1950. This enactment  
18 is chapter 127 of the Idaho Session Laws which amended section 41-204 of the  
19 Idaho Code (now section 42-204 quoted in part above).

20 The title of this amendatory act reads:

21 "Amending section 41-204, Idaho Code Annotated, as  
22 amended by chapter 145, 1935 laws, regular session, as  
23 amended by chapter 161, 1941 laws, regular session, relating  
24 to permits of the Department of Reclamation for the com-  
25 mencement of work to construct irrigation canals and re-  
26 quiring bonds for same: excepting the United States acting  
through the Bureau of Reclamation of the Department of the  
Interior from the necessity of giving bonds; authorizing  
State Reclamation Engineer to extend time for completion  
of works in connection with permits held by the United  
States."

27 This title itself makes it quite clear that it was the intention of the  
28 legislature to authorize the State Engineer to extend the time for completion  
29 of works in connection with permits held by the United States. Also, the new  
30 language inserted in section 42-204 makes it quite clear that the specific  
31 intention of the legislature in enacting this amendatory legislation related  
32 directly to the projects authorized in the Upper Snake River, particularly

1 the Palisades Dam and the related North Side Pumping Division. The situation  
2 prevailing in 1949 was that a filing had been made for Palisades Reservoir by  
3 the Watermaster of Water District No. 35 which was being assigned to the United  
4 States. The new language says: "In connection with permits held by the  
5 United States whether acquired as the original applicant, by assignment, or  
6 otherwise." Thus, this language clearly had application to Palisades  
7 Reservoir. It also had application to the North Side Pumping Division by  
8 reason of the fact that in 1949 the United States was involved in the Korean  
9 situation, and it was well known that public works projects of the United States  
10 were being delayed by reason of this involvement.

11 This legislative intent is further shown by the action of the 1951  
12 legislature when, in adopting a special procedure for obtaining ground water  
13 rights, it specifically recognized and confirmed previously pending ground  
14 water filings by including this language in section 42-226 Idaho Code:

15 "All rights to the use of ground water in this state  
16 however acquired before the effective date of this act are  
17 hereby in all respects validated and confirmed."

18 And by including this language in section 42-229:

19 "All proceedings commenced prior to the effective date  
20 of this act for the acquisition of rights to the use of  
21 ground water under the provisions of sections 42-201 -  
22 42-225, Idaho Code, may be completed under the provisions  
23 of said sections and rights to the use of ground water  
24 may be thereby required."

25 Although the language used by the legislature in 1949 indicated only that  
26 the State Reclamation Engineer "may extend the time," the Idaho Supreme Court  
27 has made it quite clear that such legislative enactments are to be considered  
28 in terms of the situation with which the legislature was intending to deal.  
29 In the recent case of Messenger v. Burns, 382 P. 2d 913, the Supreme Court  
30 said:

31 "In construing a statute, it is the duty of this court  
32 to ascertain the legislative intent, and give effect thereto.  
33 In ascertaining this intent, not only must the literal word-  
34 ing of the statute be examined, but also account must be  
35 taken of other matters, 'such as the context, the object in  
36 view, the evils to be remedied, the history of the times and  
37 of the legislation upon the same subject, public policy,  
38 contemporaneous construction, and the like.'"

1 Even more persuasive are the Idaho Supreme Court's interpretations of the word  
2 "may" when considered in connection with a statute dealing with the responsi-  
3 bilities of public officials. In *Shea v. Owyhee County*, 66 Idaho 159, 156 P.  
4 2d 331, the court had this to say:

5 "In the case of *Hayes v. Los Angeles County*, 99 Cal.  
6 74, 33 P. 766, construing a similar statute, syllabus 2  
recites:

7 'The word 'may,' in said section, means 'shall.'  
8 And, thus construed, the board having no discretion to  
9 allow or reject a claim for taxes actually paid a  
10 second time, on a refusal to allow such claim, action  
therefor lies against the county, without also making  
the state party defendant.'

11 "In the body of the decision, it is held:

12 'It is urged by respondent that the Code, by pro-  
13 viding that the board of supervisors may by order pro-  
14 vide for refunding taxes, etc., paid more than once,  
15 made it optional with that body whether to do so or  
16 not, and that the board, in this instance, having  
17 refused to refund, its action is conclusive upon the  
18 plaintiff. Where the public interest or private right  
19 requires that the thing should be done, then the word  
20 'may' is generally construed to mean the same as 'shall.'  
21 *People v. (Board of) Supervisors of Livingston County*,  
22 63 N.Y. (114), 119. Where the statute directs the doing  
23 of a thing for the sake of justice, or the public good,  
24 the word 'may' is the same as the word 'shall.' *Rex v.*  
25 *Barlow*, 2 Salk. 609. Where a statute directs a thing  
26 to be done for justice's sake, 'may' means 'shall.'  
27 *Silvey v. United States*, 7 Ct. Cl. (305), 334. Where  
28 persons or the public have an interest in having the  
29 act done by a public body, 'may,' in such a statute,  
30 means 'must.' *Phelps v. Hawley*, 52 N.Y. (23), 27;  
31 *People v. (Board of) Supervisors of Otsego Co.*, 51 N.Y.  
401. See (In re) *Estate of Ballentine*, 45 Cal 696. In  
*Supervisors v. United States*, 4 Wall. 435 (18 L. Ed.  
419), a statute of Illinois provided that the board of  
supervisors 'may, if deemed advisable, levy a special  
tax,' etc. Mr. Justice Swayne sums up the authorities  
on the question as follows: 'The conclusion to be  
adduced from the authorities is that where power is  
given to public officers, in the language of the act  
before us, or in equivalent language,--whenever the  
public interest or individual rights call for its  
exercise,--the language used, though permissive in  
form, is in fact peremptory. What they are empowered  
to do for a third person the law requires shall be done.  
The power is given, not for their benefit, but for his.  
It is placed with the depositary to meet the demands of  
right, and to prevent a failure of justice. It is given  
as a remedy to those entitled to invoke its aid, and who  
would otherwise be remediless.' Applying the rule enun-  
ciated in the foregoing cases, and it is apparent that

1 a sound and just rule of construction requires the  
2 permissive word 'may,' in section 3304, supra, to be  
construed as 'shall.'

3 "The Grimes v. Raney case, supra, places its holding on  
4 grounds of 'Legislative intention', but in view of the criti-  
5 cism in said case and of the innumerable decisions to the  
6 effect that 'Where the public interest or private right re-  
quires that the thing should be done, then the word 'may' is  
generally construed to mean the same as 'shall'', such hold-  
ing would seem unjustified."

7 Again, in Malone v. Van Etten, 67 Idaho 294, 178 P. 2d 382, the Idaho Supreme  
8 Court in determining the duty of the Public Utilities Commission said:

9 "In considering sec. 59-804, I.C.A., and the use of the  
10 words 'said application may be granted and the commission  
11 may issue a permit as prayed for upon good cause shown', may  
12 should be construed as must where the applicant for the per-  
13 mit has fully complied with each and every statutory require-  
14 ment. We think the rule is well settled that: 'Where the  
public interest or private right requires that the thing should  
be done, then the word 'may' is generally construed to mean  
the same as 'shall.''" Hayes v. Los Angeles County, 99 Cal.  
74, 33 P. 766, at page 768.

15 It is clear that the Idaho legislature in enacting chapter 127 of the Idaho  
16 Session Laws of 1949 intended to specifically authorize the State Reclamation  
17 Engineer in connection with permits held by the United States to extend the  
18 time for completion of the work recognizing the complexity of large projects  
19 undertaken by the federal government. It is also clear that the legislature  
20 in effect directed the State Reclamation Engineer to grant appropriate  
21 extensions of time upon application by the federal government. In view of the  
22 above quoted decisions of the Idaho Supreme Court it also appears that the  
23 court would consider it mandatory upon the State Engineer to issue such  
24 extensions of time.

25 With No Valid Basis Existing in the Record For Not So Doing,  
26 the State Engineer Has Authority to Issue to the Water Right  
Permit Holder the Water Right License

27 The suggestion has been made that the water right permit be canceled. It  
28 is clear, however, from section 42-311 Idaho Code that such action is to be  
29 taken only when the Department of Reclamation shall deem it advisable "to  
30 clear the records of its office" of permits. It is also clear from section  
31 42-219 Idaho Code that where a water right permit holder has complied with the  
32 procedures of the statute with respect to completion of works and submission

1 of proofs, that a water right license is to be issued, notwithstanding meeting  
2 of time periods set out in the water right permit. This section further  
3 indicates that on irrigation projects such as the North Side Pumping Division,  
4 involving an area of more than 25,000 acres, the water right shall relate to  
5 the entire project even though the proof shall have been made after the dates  
6 stated in the permit.

7 As indicated previously, no protests were properly served upon the State  
8 Engineer or upon the permit holder in connection with the processing of the  
9 water right permit to its statutorily required form of a water right license.  
10 This is true notwithstanding the State Engineer's office publishing a notice  
11 concerning the request of the permit holder for an extension of time in 1955  
12 even though such notice was not required by the Idaho statutes. It is true  
13 that the State Engineer's office has received informal letters indicating  
14 personal preferences about the matter of extending the time as requested by  
15 the permit holder. These letters, however, were not served upon the permit  
16 holder. No one appeared formally in the proceeding setting out any facts with  
17 respect to their relationship to the public waters involved under the permit  
18 holder's water right permit or alleging any facts as to any conflict between  
19 the project water supply and the lands of a protestant.

20 Not only were no timely or proper protests filed in any formal manner on  
21 the completion of the water right permit to a water right license, but also  
22 no one has any valid basis for alleging any real conflict or interference.  
23 The State Engineer in his decision of April 5, 1956 himself found this to be  
24 the fact in the following language:

25 "Geological Survey Circular 371, Ground Water in the  
26 North Side Pumping Division, Minidoka Project, Minidoka County,  
27 Idaho, says: 'Local lowering of water levels by sustained  
28 heavy pumping in the North Side Pumping Division and adjacent  
29 areas probably will cause low-order regional lowering of water  
30 levels.'

31 "It is the opinion of the State Reclamation Engineer that  
32 water rights initiated in the vicinity of the Project since  
1948 would not be seriously injured by approval of the Appli-  
cation for extension of time and it is also the opinion of the  
State Reclamation Engineer that the water rights of the Project  
as a whole would not be seriously injured by denial of the  
Application for Extension of time."

1 It has been clearly held by the Idaho Supreme Court in Big Wood Canal Company  
2 v. Chapman, 45 Idaho 380, 263 Pac. 45, that in upholding the water right permit  
3 procedures undertaken by the Big Wood Canal Company that a water right license  
4 is valid where there has been substantial compliance with the statutes and  
5 that actions taken by the legislature in revising then applicable statutes to  
6 permit a longer period of time for the completion of the procedural steps under  
7 the state water right procedures was valid as against the complaints of those  
8 who would have benefited had the water right license been forfeited.

9 It appears clear from the statements provided to the State Engineer's  
10 office concerning this matter that the real complaint in the statements is not  
11 against the administration of the state water right procedures but rather  
12 against the applicable law relating to the obtaining of a water right permit  
13 and license as established by the legislature. It is clear that the legisla-  
14 ture intended and did establish the procedure whereby a large community water  
15 project can be undertaken and developed over a period of years with that water  
16 project having a priority date for its water supply relating back to the  
17 initiation of the enterprise, even though adjacent later developments proceed  
18 to completion before the entire community project is developed. This is a  
19 matter for legislative policy determination and once the legislative policy  
20 has been determined the project which has been undertaken under that policy is  
21 entitled to receive the water right license in accordance with the policy as  
22 established by the legislature.

23 Conclusion

24 The foregoing demonstrates clearly that the applicable law relating to  
25 water right procedures not only authorized but in fact directed an extension  
26 of time for the completion of the procedures for the North Side Pumping  
27 Division. Also, there was an administrative recognition by the State  
28 Engineer's office of a defacto postponement of the time for the making of  
29 proofs of completion and the application of water to beneficial use.

30 In the light of discussions between the representatives of the Bureau of  
31 Reclamation and Mr. Carter subsequent to Mr. Carter's letter of January 17,  
32 1961, as disclosed in Mr. Nelson's letter to Mr. Tappan dated May 1, 1964, it

1 seems clear that his statement in the letter that:

2 "In statutory theory, this permit is now subject to  
3 cancellation but as a matter of practice it would not be  
cancelled."

4 was construed and understood by him and the Bureau of Reclamation as an  
5 extension of time for completion of works. The Assistant Attorney General, of  
6 course, was unaware of this understanding at the time he wrote his opinion of  
7 February 28, 1964. No question is raised by anyone as to whether the State  
8 Reclamation Engineer had authority to grant this extension. Likewise, no  
9 question is raised by anyone that timely action was taken in submitting proof  
10 of application to beneficial use.

11 Thus, the project did in fact comply with all statutory requirements and  
12 most certainly there is no basis for canceling the permit and no requirement  
13 that it be canceled.

14 There, therefore, remains the sole question as to what should be the  
15 proper date of priority. Mr. Kulp in his decision of April 5, 1956, held that  
16 the wells drilled after November 5, 1955 would have a priority of that date  
17 and wells drilled before that date would have a priority date of September 9,  
18 1948. It is our view that this order is invalid and was issued without  
19 statutory authority. This is recognized by the Assistant Attorney General in  
20 his opinion of February 28, 1964. He said:

21 "As noted above, Kulp's order of April 5, 1956, divided  
22 the dates of priority under Permit No. 20736 around November 5,  
23 1955. There is no indication in that order of what statutory  
or other basis Kulp utilized in making that portion of the  
order, and our research reveals none."

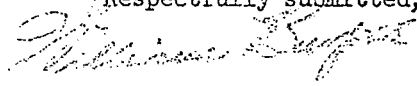

24 Moreover, the North Side Pumping Division Unit B is operated as a unit with  
25 all water users participating therein, sharing a common water supply and  
26 common expenses. This arrangement is in keeping with the project authoriza-  
27 tion, written into a project repayment contract which was voted on by the  
28 water users and has been confirmed as lawful by a court confirmation proceed-  
29 ings in the district court. Thus, it is both impractical from an engineering  
30 point of view to operate the project and distribute the water on the basis  
31 of the project having separate priority dates, and even if practical such an  
32

1 operation would be in conflict with the contractual arrangements which have  
2 been approved and confirmed as lawful for the project under applicable Idaho  
3 law.

4 In view of the foregoing, the proper date of priority for all the wells  
5 should be in accordance with the terms of the permit, that is, September 9,  
6 1948.

7 There being no formal appearances or objections, even after several  
8 publications and widespread public announcements, the license should be  
9 issued with a priority of September 9, 1948 and any burden of appealing the  
10 same should be on the so-called objectors rather than on the project.

11 Respectfully submitted,

12  
13 William Burpee  
14 Field Solicitor
