Re: Second Amended Notice of Claim for 41-00024B (Ralphs)

On March 26, 2001, I wrote to the Court saying that claim no. 41-00024B must be amended to add a second point of diversion. This amendment was necessary to accurately reflect Mr. Ralphs' historical beneficial use as described in Water Master James Robinson's records. The Court deemed my letter as Mr. Ralphs' motion to file a second amended notice of claim. In a hearing on April 4, 2001, Mr. Ralphs appeared and agreed that the additional point of diversion needed to accurately reflect his historical beneficial use of water. Mr. Ralphs stated that he has historically taken 45 inches of water from the Wood ditch and 5 inches of water from the City ditch. The Court granted Mr. Ralphs' motion to file a second amended notice of claim. IDWR deemed Mr. Ralphs' concurrence with the motion at the hearing as Mr. Ralphs' late claim and did not require him to file a second amended notice of claim for this water right. Transcripts of the April 4, 2001 hearing are available from the SRBA court.

Subject: Irrigation Diversion Rate Analysis – Water Right 41-24B

Irrigation diversion rate analysis for the water right listed above is complete. This memo is a summary of the information on which calculations are based, the assumptions made, and results of the analysis.

Per telephone conversation with Mr. Ralphs, this system is irrigated with moveable stationary laterals (hand or wheel move). Typical application efficiency for these systems ranges from 60 to 75 percent. The analysis was made assuming an efficiency of 67.5 percent which is the average value for the typical range.

The American Falls 1 SW weather station was chosen for evapotranspiration (ET) data. Another nearby station is Arbon 2 NW. The American Falls station provides slightly higher ET values than the Arbon station, and was chosen in order to provide conservative results.

Mr. Ralphs also said that the main crop is alfalfa pasture. Therefore, the ET reference value for alfalfa was used for analysis. The ET alfalfa reference value is significantly higher than ET for pasture grass, and thusly is a conservative selection.

Soils information was obtained from the NRCS SSURGO digital soils database. It shows that the soil is a silt loam (upper layer) and silty clay loam (deeper layer) with a fairly high available water content of 6 inches total for alfalfa with a rooting depth of 5 feet. However, the analysis was performed using a net irrigation application of 3 inches instead of 6 inches. An application of 6 inches indicates a required irrigation frequency of 17 days, whereas an application of 3 inches indicates a frequency of 8 days. It is assumed that an eight-day frequency is more realistic than a 17-day cycle. This approach is conservative; an eight-day frequency results in a slightly higher irrigation requirement than longer frequency periods.

RESULTS

The computed total diversion rate is 0.83 cfs for 36 acres, or 0.023 cfs per acre.

This is my estimate of the flow for Ralphs' gravity system. It has been several years since I looked that closely at his property. I did not have this information recorded as part of the file. If we need more exact info we will need to contact Ralphs or visit the site.

ORDER GRANTING MOTION TO
FILE AMENDED NOTICE OF
CLAIM and ORDER SETTING
DEADLINES

On December 4, 2000, claimants Reynold and Delford Ralphs filed a *Motion to File Amended Notice of Claim* seeking to increase the number of irrigated acres. The Ralphs originally claimed 1 cfs to irrigate 31.4 acres; the *Director's Report* recommended .56 cfs to irrigate 28 acres; and the amended claim is for 1 cfs to irrigate 37 acres.

A hearing on the *Motion* was held on January 26, 2001. Claimant Reynold Ralphs appeared *pro se* and Garrick Baxter and Candice M. McHugh appeared for IDWR.

Counsel for IDWR agreed the Ralphs' claim requires amendment to correct the number of irrigated acres and to specify the correct diversion quantity based on a unique measuring devise historically used in Basin 41.

THEREFORE, IT IS ORDERED that:

1. The Ralphs' *Motion to File Amended Notice of Claim* is **granted**;
2. IDWR shall file an amended director's report with a recommendation concerning the amended claim no later than Monday, March 26, 2001; and
3. Objections to the amended director's report shall be filed no later than **Monday, April 30, 2001**.

Dated August 3, 2000.

He and his wife came in to discuss the amendment of his claim 41-00024B. We reviewed the various claims made by the city and found the 50" he has claimed appear to be accurate with the Houtz decree. The 5" he thought he claimed for the 5 neighbors to the west is not true and it was actually claimed in full by the City of Rockland, see 41-00002B. I edited a GIS shape for the POU and found 36 acres but we amended the claim to 37 acres to provide some adjustment if necessary based on the plat map from the assessor. I ask Mr. Ralphs to fax or send me a copy for the Q-Q in question so there is no confusion on the correct property lines in the corners.

R. KEITH HIGGINSON

Director

February 10, 1995

Dear Wateruser:

In response to the Bench Ditch Irrigation Company's letter to IDWR dated January 25, 1995, this letter is being sent to all waterusers of record in the Basin 41 Water District.

As you may know, the arbitration for delivery of water that has operated in the Rockland valley for over 100 years has been very effective in allowing the delivery of water rights by the local watermaster. The box method described in the arbitration has worked to divide the waters fairly, but recent studies of the boxes have determined the actual flow rates that have been delivered for years are different than the rates listed in the arbitration. This is largely due to the fact that the box method, as applied in the valley, is not a standard measuring device.

It is IDWR's position that:

Rights recommended in the ongoing Snake River Basin Adjudication, will be based on the historical beneficial use and historical diversion rate represented by use of the box method.

Conversion to an approved, standard measuring device is encouraged but should not result in a increase in the amount of water diverted. IDWR requests, before any old diversion structure is removed or destroyed, to view and measure the historical diversion rate as delivered by the box described in the arbitration.

Any change in measuring devices or structures that results in an increase of diversion rates above the historical beneficial use will result in injury to junior right holders within the Rock Creek system.

We look forward to working with all waterusers in the district. SRBA examinations will resume in the spring of 1995 and IDWR will measure and evaluate all of the structures diverting from Rock Creek and the East Fork of Rock Creek. If you have questions please contact me at my office in Twin Falls.

Sincerely,

STEVE CLELLAND
Water Resource Agent
