RE: 72-00002C

Dear Mr. and Mrs. Taylor,

This letter is in response to the Notice of Error (NOE) you recently filed with IDWR regarding the Director's proposed recommendation of the claim listed above. Your NOE questioned the word "NONE" under Purpose of Use.

This was a computer error which should have been removed before the report was generated. I have removed it from your recommendation and have enclosed a new print-out of the recommendation for your records.

This should take care of the problem.

Sincerely,

Jeanie Robertson

The rate per acre calculations are based upon a 300 foot run at a 2% slope. An 8 hour set time was also used. Individual graded border evaluations, soil characteristics work sheets, and peak irrigation diversion requirement work sheets have been created and archived separately for each soil type.

Where actual rotation is shorter than the optimal rotation, optimal rotation is the criteria to be used for the recommendation analysis and, therefore, the rotation percentage adjustment is not necessary. The rate becomes the acres per soil type times the rate per acre from the above chart.

I asked Mr Taylor about the mound of earth that was in his Pasture area. He said it was formed when a former potato cellar was removed. The Forest Service is gradually removing it for use for road repair on the forest. It is irrigated as part of the Pasture and used for grazing. This mound was only irrigated for part of the Season in 1993 and was very dry in September, 1993.
